- J: Asbestos Landfill Documents

## A. Introduction

On behalf of the Saint Paul Port Authority (SPPA), Braun Intertec Corporation has prepared this Response Action Plan (RAP) Implementation Report to document the corrective actions completed at the former Hillcrest Golf Course property (now known as the Heights) located at 2200 Larpenteur Avenue East, St Paul, Minnesota (Site). Response actions were implemented to address impacted soils above relevant cleanup standards identified at the Site. Figure 1 shows the Site location.

Response actions were completed in general accordance with the report entitled *Revised Response Action Plan, Hillcrest Redevelopment Site, Saint Paul, Minnesota*, dated September 1, 2022 (2022 RAP), which was approved by the Minnesota Department of Agriculture (MDA) in a letter dated October 28, 2022, and by the Minnesota Pollution Control Agency (MPCA) Petroleum Brownfield (PB) Program in a letter dated September 22, 2022. A copy of the MDA and MPCA approval letters are included in Appendix A.

The response action components included demolition of Site building structures, abandonment of existing wells, excavation and offsite disposal of impacted-soils (mercury, arsenic, and/or petroleum) and/or debris-laden soils, and confirmation sampling and testing of the excavation areas. The RAP components were developed to protect human health and the environment at, and in the vicinity of, the Site.

The SPPA is requesting the following documentation:

- RAP Implementation Approval Letters from the MDA and MPCA for the response actions taken at the Site in accordance with the 2022 RAP.
- A No Further Action letters from the MDA and MPCA for the response actions taken at the Site.

## B. Background

### B.1. Site Location and Description

The Site is located at 2200 Larpenteur Avenue East in Saint Paul, Ramsey County, Minnesota (see Figure 1). According to the 2019 Phase I Environmental Site Assessment Titled *Phase I Environmental Site Assessment, Former Hillcrest Golf Course, McKnight Road and Larpenteur Avenue East, St. Paul, Minnesota*, dated June 10, 2019 (2019 Phase I ESA, the Site is approximately 112 acres in size and includes six separate parcels. Prior to the 1920s the Site was cultivated agricultural land or grazing land.

The Hillcrest Golf Course was developed in the 1920s as a full size 18-hole private golf course/club that included clubhouse facilities, a swimming pool with pool building, driving range, practice putting greens, tennis courts, and various support buildings on the north side of the Site, and agricultural chemical storage buildings and maintenance shop on the southeastern side. Earthen berms, which contained contaminated soils and intermixed debris, were located along the southeastern boundary of the Site next to and south of the maintenance area and two unsealed water wells and two small petroleum above ground storage tanks (ASTs). The golf course ceased operations in 2017 and the Site remained vacant since that time until the start of redevelopment activities in 2023. The Site conditions prior to the start of redevelopment are shown on Figure 2.

During use as a golf course, various pesticides and various petroleum products were used and stored on the Site. Regarding the use and storage of petroleum products, three past petroleum releases have been reported at the Site, Leak ID# 5050; Leak ID# 6222; and Leak ID# 18327. Based on the property use at the time of the releases, all three petroleum release leak sites were closed by the MPCA following review of the follow up site investigations, or in the case of Leak ID #6222, review of the limited soil cleanup actions taken following tank removal.

## **B.2. Previous Site Investigations by SPPA**

### **B.2.a. Overview**

Previous environmental investigations performed at the Site have identified soil, sediment, soil vapor, and groundwater impacts associated with the past use of the Site as a golf course. The SPPA performed a Phase II Environmental Site Assessment (ESA) of the Site to investigate the Recognized Environmental Conditions (RECs), Historical RECs (HRECs), and Controlled RECs (CRECs) identified in the 2019 Phase I ESA. In addition, the SPPA recently performed a Remedial Investigation (RI) of the Site in support of the planned redevelopment. Results of previous environmental investigations are included in the document entitled: *Remedial Investigation Report, Former Hillcrest Golf Course Site, St. Paul, Minnesota*, dated March 1, 2022 (2022 RI Report). Based on the results of the previous investigations, a RAP was developed to manage the on-Site contaminants prior to redevelopment activities.

The following sections summarize the results of the previous environmental assessments and investigations completed by the SPPA.

#### **B.2.b. 2019 Phase I ESA**

Prior to property acquisition in June 2019, the SPPA retained Braun Intertec to complete a Phase I ESA of the Site. In summary, the 2019 Phase I ESA identified the following RECs related to the Site:

- The presence of remaining contamination from past petroleum tank leaks.
- The potential for agricultural chemical releases to the soil and groundwater.
- The potential for the repeated historical application of fungicide to result in an accumulation of mercury in the soils over time.
- The potential presence of contaminated soils and buried regulated waste materials in berms present at various locations.

No HRECs or CRECs were identified for the Site in the 2019 Phase I ESA.

In addition, as part of the 2019 Phase I Addendum, Braun Intertec reviewed the historical agricultural pesticide and fertilizer use at the former golf course. The facility primarily used granular and soluble fertilizers consisting of various brands and formulations of nitrogen, potassium, and phosphorus-based fertilizers. The majority of these fertilizers were applied to greens, tee boxes, and fairways with occasional applications to roughs and around the clubhouse area.

The facility used a variety of pesticides including fungicides, herbicides, insecticides, and algicides for various applications across the golf course. Based upon available usage records it appears that these pesticides were used in smaller quantities primarily on the greens, but occasionally on the fairways, approaches, and tees, and sporadically around the clubhouse. Reportedly, the facility had discontinued use of mercury-based fungicides sometime prior to 1994.

#### **B.2.c. Phase II ESA/ Remedial Investigation**

In 2019, Braun Intertec conducted a Phase II ESA, in support of the SPPA acquiring the Site, the results of which are presented in the report entitled: *Preliminary Phase II Environmental Site Assessment, Former Hillcrest Golf Course, St. Paul, Minnesota*, dated June 10, 2019 (2019 Phase II ESA).

The 2019 Phase II ESA consisted of geotechnical and environmental soil borings, temporary perched groundwater monitoring wells, soil vapor probes, and a sub-slab vapor point. In addition, soil samples were collected throughout the former golf course area.

Braun Intertec conducted the 2022 RI to further define the impacts identified during the 2019 Phase II ESA. The scope of the RI was detailed in the RI Work Plan dated March 27, 2020, with minor additional sampling addressed in the RI Work Plan Addendum dated June 12, 2020, and RI Work Plan Addendum #2 dated October 7, 2021 (collectively known as RI Work Plan). The RI Work Plan was approved by the MDA Incident Response Staff on May 5, 2020, and the RI Work Plan Addendum was approved by email on June 23, 2021. The RI Work Plan Addendum #2 was approved by MDA Incident Response Staff on November 2, 2021.

The RI was primarily performed between June and August 2020, with additional investigation performed in November 2021 and July 2022. The results of the RI were included in the 2022 RI Report dated March 1, 2022, which included a summary of the data presented in the 2019 Phase II ESA

The RI consisted of soil borings, hand augers, test pits, sediment samples, groundwater samples, and surface water samples.

The following provides a summary of the conclusions of the 2019 Phase II ESA/2022 RI:

- Investigations at the Site have detected both non-petroleum and petroleum compounds in soil at various locations and depths across the Site. The non-petroleum impacts included widespread mercury contamination from the historical use of specialty fungicides and other turf management agricultural products associated with golf courses dating back to the 1930's and into the 1990's. Additional non-petroleum impacts to soil from polycyclic aromatic hydrocarbons (PAHs) and arsenic were also detected at a few locations at the Site.
- The highest concentrations of mercury were detected in soil samples collected from the former greens and related fringe/apron areas. Mercury concentrations were detected consistently on greens, tee boxes, fairways, and in soil near the "mixing area."
- The mercury concentrations in the fairways varied with many soil sample results exceeding the Residential/Recreational and Commercial/Industrial Soil Reference Values (SRVs). Mercury concentrations exceeding the SRV were detected in all greens, and the majority of the tee boxes. Approximately half of the fairways had detections of mercury at concentrations greater than Residential/Recreational SRVs. Mercury concentrations in the golf course roughs were typically well below the Residential/Recreational SRV and generally in the range of naturally occurring mercury concentrations. There were some exceedances of the mercury SRV in localized areas near cart paths or operation areas. Mercury (total or dissolved) was not detected above laboratory reporting limits in the surface water or groundwater samples analyzed during the Site investigation.

- Petroleum impacts in soil detected at the Site are primarily associated with the past use and storage of diesel fuel and gasoline products in the former maintenance shop area located on the east side of the Site adjacent to McKnight Road. DRO was detected in shallow groundwater in the former tank area of the Site. The residual petroleum shallow groundwater contamination associated with the former petroleum storage tanks in the maintenance area was previously investigated prior to closing the petroleum leak sites.
- The buried debris includes the area of the former pool house and tennis courts, which contained various fill soils intermixed with debris. The observed debris included paint cans, concrete, asphalt, plastic, pieces of tennis court and other solid garbage materials. DRO was detected in the soil associated with the buried debris at concentrations exceeding the MPCA unregulated fill criteria. Several soil berms containing contaminated soils intermixed with debris are present in the wooded area south of the maintenance shop on the east side of the property and adjacent to McKnight Road. A composite soil sample consisting of several discrete soil samples collected from different areas of the soil berms with observed debris detected mercury at concentrations exceeding the Residential/Recreational and/or Commercial/Industrial SRV; however, PAHs were detected at concentrations below SRVs.
- Low concentrations of VOCs were detected in soil vapor samples collected from the buried debris area. However, none of the detected concentrations of VOCs in soil vapor were above the MPCA's action level of 33 times (33X) the residential intrusion screening values (ISVs) in any of the sample locations.

#### **B.2.d. 2022 Response Action Plan**

Braun Intertec prepared the 2022 RAP in support of the planned redevelopment of the Site to address the impacts identified in the previous investigations.

As described in the 2022 RAP, direct human exposure to contaminated soils was the primary environmental risk impacting the planned redevelopment at the Site. The proposed response action activities included the following:

- Removal and management of contaminated media during Site clearing and grubbing.
- Abandonment of the existing monitoring wells and abandoned groundwater wells at the Site.
- Demolition of buildings and existing structures.
- Removal of subsurface utilities located within targeted soil remediation areas to provide access to impacted soils.

- Removal of subsurface irrigation infrastructure located within targeted soil remediation areas to provide access to impacted soils.
- Management of surface water at the Site to facilitate soil remediation.
- Excavation of mercury impacted soil/sediments exceeding established cleanup standards and disposal of the excavated material offsite.
- Management of residual mercury impacted soils with concentrations above naturally occurring background levels.
- Excavation of PAH and arsenic contaminated soil exceeding established cleanup standards and disposal of the excavated material offsite.
- Excavation and on- or offsite management of regulated fill soils.
- Backfilling remedial excavations as needed with clean soil from on-Site and/or imported fill material from offsite.
- Petroleum impacted soil excavation and disposal offsite.
- Short term/temporary engineering controls (dust control, storm water control, Site access).

For reference all figures and summary data tables for all investigation data collected to date are included in the 2022 RAP.

### **B.3. Published Geologic Information**

#### **B.3.a. Topography**

According to the United States Geological Survey (USGS) 7.5-minute topographic map series, St. Paul East, Minnesota quadrangle, the Site elevation ranges from approximately 1,000 feet to approximately 1,060 feet above mean sea level (AMSL) and the terrain is rolling (2019 Phase I ESA).

#### **B.3.b. Geology**

The unconsolidated sediments in the Site vicinity are Pleistocene age till deposits that consist of sandy loam, clay loam, and silty clay loam. The till deposit is generally reddish brown in color and is locally compact (2019 Phase I ESA).

The depth to bedrock in the Site vicinity is 100 to 150 feet below land surface (2019 Phase I ESA). The uppermost bedrock units in the Site vicinity include the Middle Ordovician, Decorah Shale on the western portions of the Site, the Platteville and Glenwood Formations on most of the central and northern portions of the Site, and the St. Peter Sandstone on the southern portions of the Site (2019 Phase I ESA).

### **B.3.c. Hydrogeology**

The reported depth to groundwater in the Site vicinity is 100 to 200 feet below land surface. Shallow groundwater may occur at shallower depths above clay layers. The depth to first groundwater at the Site as measured in the three permanent monitoring wells installed as part of the RI ranged from 4 feet below ground surface (bgs) to 29.9 feet bgs, corresponding to an elevation of 996 to 1014 feet AMSL. According to published geologic information, the regional groundwater flow direction in the Site vicinity is generally westerly (2019 Phase I ESA).

## **B.4. Proposed Redevelopment**

The redevelopment of the Site will result in a new multi-use development. The redevelopment will include areas of light industrial and commercial use, high, medium, and low-density residential use, associated parking/drive areas, new infrastructure, recreational park use, and passive greenspace areas. Added infrastructure included with the redevelopment includes installing electric, sewer and water utility lines, and constructing several public streets and stormwater management systems. Conceptual Maps depicting the current planned redevelopment configuration and future land uses are included as Appendix B.

## **B.5. Soil Cleanup Standards**

In accordance with the MPCA and MDA approved RAP, human exposure to impacted soils is the main risk in relation to the planned redevelopment of the Site. This potential risk was addressed by proper management of the impacted soils with concentration of mercury and other site contaminants above residential standards per the 2022 RAP.

## **B.6. Response Action Plan Components**

Response actions were developed based on review of the Site conditions, cleanup standards, results of the previous investigations, discussions with MPCA and MDA staff, and the proposed redevelopment of the Site.

The proposed response action activities focused on excavation and management of impacted soils identified at the Site. Figure 3 shows the areas of identified impacts and estimated volumes of impacted soil proposed to be addressed as part of the 2022 RAP. The proposed response actions were designed to address the identified soil contamination at the Site to protect human health and the environment at the Site and facilitate redevelopment. The response actions were selected based on Site conditions and appropriate cleanup standards for planned future land uses of the Site.

Several response action elements were necessary to address the identified soil contaminants and to protect human health and the environment at and in the vicinity of the Site. The response action plan components included:

- Environmental monitoring of Site excavation activities.
- Management of contaminated soils during Site clearing, grubbing, and tree removal/replanting.
- Demolition of existing buildings and on-Site structures.
- Management of surface water at the Site to facilitate soil remediation.
- Abandonment of existing wells.
- Excavation of mercury, arsenic, and PAH impacted soil.
- Excavation of petroleum impacted soils with intermixed debris.
- Performing Site controls and Best Management Practices (BMPs) for dust emissions.
- Offsite disposal of impacted soils.
- Confirmation sampling and testing.

## **C. RAP Implementation**

The SPPA contracted with Bolton & Menk as the construction manager, Braun Intertec as the environmental consultant, and Bolander as the earthwork contractor to perform the required

soil excavation, transportation, and offsite disposal work. Excavated impacted soils were disposed of at SKB Environmental Landfill (SKB) in Rosemount, Minnesota. The activities documented in this report were completed between July 2023 and January 2024.

Braun Intertec personnel were on-Site full-time during the implementation of the RAP to document soil excavation and segregation, soil stockpiling, and on-Site soil placement, to perform confirmation soil sampling, and to manage soil manifests for soil removed from the Site.

The RAP implementation work was performed in accordance with plans and specifications prepared by Braun Intertec. Oversight of the work included real-time screening for organic vapors and airborne dust, sampling and analysis of soil samples for excavation verification purposes, tracking of contaminated soil stockpiles and volumes, surveying excavation boundaries, and documenting the work described in this RAP Implementation Report.

Braun Intertec field representatives took photographs of Site activities and conditions. A photograph log for the project is included as Appendix C. In addition, Braun Intertec prepared and submitted weekly progress reports to the MDA during the remedial excavation. Copies of the weekly reports are included as Appendix D.

The RAP Implementation primarily consisted of the excavation and removal of impacted soils for offsite disposal at a permitted landfill, and additional response actions detailed below.

## **C.1. Response Actions**

### **C.1.a. Environmental Monitoring**

Braun Intertec provided environmental monitoring services during construction activities including excavation monitoring, soil screening, sampling, segregation of debris laden soils, and contaminated materials disposed offsite. Excavated soils were visually observed for the presence of contamination, such as debris, possible asbestos containing material (ACM), soil staining, and/or odors. Soils were screened for headspace analysis of organic vapors following MPCA-approved methodology using a photoionization detector (PID) equipped with a 10.6-electron-volt (eV) lamp.

### **C.1.b. Site Clearing, Grubbing, and Tree Removal/Replanting**

Prior to major earthwork remediation, trees, stumps, surface vegetation, and related subsurface root systems were cleared and grubbed as necessary to facilitate completion of response actions and redevelopment. YTS Companies, LLC, of Minneapolis, Minnesota was the contractor completing the tree removal.

#### **C.1.c. Demolition of Existing Buildings and On-Site Structures**

The existing Site buildings, including slabs and foundations, as well as the water lines, sanitary/storm sewer lines and other buried utilities, were demolished and removed as part of the planned development work. The existing paved areas and concrete slabs at the Site, where practical, were reclaimed, crushed, and re-used on-Site as aggregate base materials (i.e., MNDOT Class 5) for future roadways or parking areas. During demolition and removal activities, environmental observations and field screening for the presence of wastes and unanticipated impacted material were performed. Hazardous materials were properly removed/abated from the existing structures before demolition of the structure. After demolition of the clubhouse, the below ground level was backfilled with on-Site clean soils (see Section C.3.c).

#### **C.1.d. Management of Surface Water and Shallow Groundwater**

Dewatering and on-site management of surface water in existing ponds and potential wetlands was required to complete soil response actions in some areas of the Site. Previous testing on site has shown that the surface water onsite was not impacted with the Site contaminants of concern (2022 RAP). Water from within the ponds and potential wetlands, as well as stormwater catch basins/manholes and piping, was pumped out using a trash pump and hoses or similar equipment. Dewatered surface water managed during response action implementation was pumped into existing drainage pond(s) on-Site. BMPs including filtration and/or sediment settling tanks were used during water pumping activities to minimize the potential for sediments and/or soils to become intermixed with the water being managed.

#### **C.1.e. Abandonment of Existing Wells**

On August 14, 21, and 25, 2023, Keys Well Drilling Company, of Saint Paul, Minnesota, was on-Site to seal and abandon four of the five Site wells. The wells that were abandoned were MW-1 (unique number 849084), MW-2 (unique number 849085), MW-3 (unique number 849086), and the undocumented well near the former maintenance buildings. Well boring and sealing records are included in Appendix E. The former Irrigation well (unique number 603061) is still present at the Site, the components have all been removed but the well itself remains, it is our understanding that SPPA is planning to have a drilling firm properly abandon that last well in the coming months.

#### **C.1.f. Excavation of Mercury and Arsenic Impacted Soil**

A Braun Intertec environmental technician was on-Site during response action excavation activities associated with the excavation and removal of arsenic, mercury and PAHs contaminated soils known to exceed Site cleanup standards. Excavation areas were pre-staked using global positioning system (GPS) coordinates based on previous environmental data, and the heavy equipment was equipped with GPS receivers that contained the planned excavation areas and depths. Arsenic and mercury impacted soils were excavated from tee boxes, fairways, greens/fringes, roughs, and various other soil SRV exceedance areas throughout the Site.

Based on concentration data, the soils were divided into three soil categories as follow:

- Type 1 soils had no concentrations above Residential/Recreational SRVs;
- Type 2 soils are soils from the tee boxes, fairways, ponds, and wetlands that contain residual mercury COCs impacts below the Residential/Recreational SRVs, but are above typical background concentrations for mercury and other COCs in soils in this region;
- Type 3 soils were soils that had concentrations above Residential/Recreational and/or Commercial/Industrial SRVs.
- The Type 3 soils were then divided into two sub-categories: soils with concentrations greater than 10 milligrams per kilogram (mg/kg) for mercury and soils with concentrations less than 10 mg/kg of mercury, based on the analytical results from the previous site investigations. Arsenic contaminated soils were limited in extent to the former 8th Green and combined with the greater than 10 mg/kg of mercury category soils at that location.

The initial excavation depths were based upon the results of the previous investigations and ranged from 0.5 to 10 feet bgs (Figure 3). The initial excavation depths were based upon the vertically stratified sampling data collected to date at the Site. Excavation boundaries were extended until confirmation sample analytical results (sidewalls and base) met the Residential/Recreational SRV for mercury of 2.7 mg/kg/arsenic of 9 mg/kg; If side wall or base confirmation sampling indicated that residual mercury and/or arsenic was detected at concentrations above the Residential/Recreational SRVs in a base or sidewall sample, that area was further excavated approximately 2 to 3 feet from the previous excavation extent and resampled. This procedure was repeated until confirmation samples were below Residential/Recreational SRVs.

Excavated arsenic and/or mercury-impacted soils exceeding established Site cleanup standards were windrowed (laid in long linear piles) in the fairways or stockpiled on top of impacted mercury soils, then direct-loaded into trucks and transported to SKB. All loads were tarped prior to leaving the Site. Mercury impacted soils greater than 10 mg/kg were fully wrapped using polyethylene sheeting by Bolander and then tarped before leaving Site. If direct loading could not be utilized, the soils were temporarily stockpiled on-Site until transportation and disposal arrangements were made. Per the RAP, stockpiled soils were placed on polyethylene sheeting or other impervious surface and covered with polyethylene sheeting at the end of each workday. The polyethylene sheeting was secured in place daily. A berm was then placed around the stockpile to prevent storm water run-on and/or runoff.

A summary of the total amount of impacted soil sent to SKB for proper disposal is provided in Section C.3.a.

#### **C.1.g. Excavation of Petroleum Soils with Intermixed Debris**

A Braun Intertec environmental technician was on-Site during response action excavation activities associated with the removal of petroleum-related contamination with intermixed debris soils known to exceed Site cleanup standards. The petroleum-related contaminated soil (DRO) with intermixed debris was in the southeast portion of the Site near the former maintenance buildings and berm areas. Additionally, there was buried debris in the northwest portion of the Site near the former tennis court and pool area by the former clubhouse. These areas are shown on Figure 4 labeled as "Berm North", "Debris Area", and "Debris Area 2", respectively.

In addition, there were isolated areas of soils at the Site that were impacted with PAHs at concentrations above Residential/Recreational (e.g., small area near the clubhouse and within the buried debris in the southern berm). Excavation areas were pre-staked using GPS coordinates based on previous environmental data. The profile for this waste stream was labeled "Petroleum Contaminated Soil with Intermixed Debris". The initial excavation depths ranged from surface to 5 feet bgs at the Site. Post excavation boundaries (sidewalls and base) met the Residential/Recreational SRVs (see Section C.4) for SRVs and/or less than 100 mg/kg for GRO.

Excavated soils were direct loaded into trucks and transported to SKB (See Section C.3.a). If direct loading could not be utilized, the soils were stockpiled on-Site until transportation and disposal arrangements were made. Stockpiled soils were managed as described in Section C.1.f.

#### **C.1.h. Site Controls**

The following controls were necessary during the soil response action activities to ensure the work was conducted in a manner that is protective to the health and safety of on-Site workers and the general public. A Site-specific health and safety plan (HASP) detailing personal health and safety measures was prepared and implemented for the RAP implementation activities. The earthwork contractor also prepared and implemented a HASP that addressed environmental concerns, as well as those concerns normally associated with excavation and compaction activities.

The RAP included specifications and techniques to manage temporary engineering controls throughout the construction activities. The engineering controls that were implemented during the response actions to protect human health and the environment included Site-wide dust monitoring and control (to ensure adherence with the nuisance dust standard), storm water controls, and limiting Site access. These controls were designed, planned, and documented throughout the implementation of the RAP.

The protection of human health to the surrounding neighborhood was managed through particulate monitoring, removal of contaminated soils, and preventing unauthorized access to the Site. The protection of the environment included managed run-on/runoff and infiltration of water that may have come in contact with contaminated soils.

Dust created from grading and soil consolidation actions was controlled by applying water to the soils being worked. Visibly dry areas were watered using a water truck. At the end of the workday, exposed soils were sprayed with water to form a crust. The amount of water used for dust suppression was carefully controlled so that runoff did not occur. Records were kept of the date, time, location, and method of dust suppression. Street sweepers were also implemented to minimize tracking of soils offsite during hauling.

#### **C.1.i. Dust Monitoring**

As part of the response actions, Braun Intertec performed particulate monitoring across the Site to monitor for airborne dust.

The particulate monitoring was performed in accordance with the *Dust Monitoring Plan for Response Action Implementation, The Heights Development, Former Hillcrest Golf Course Site, Saint Paul*, prepared by Braun Intertec and Dated March 31, 2023 (2023 Dust Monitoring Plan). The 2023 Dust Monitoring Plan was approved by the MDA in a letter dated May 10, 2023.

As part of the 2023 Dust Monitoring Plan, a site-specific action level (SSAL) was calculated per Occupational Safety and Health Administration (OSHA), and National Ambient Air Quality Standards for Particle Pollution standards. The SSAL was used to establish various actions that would occur at the site if particulate concentrations approached the SSAL.

The particulate monitoring included the use of real time air monitoring equipment with real time data alerts, which were then used by Braun Intertec staff to direct onsite contractors to implement actions onsite to address dust as needed. As part of the response action plan dust control measures were implemented during excavation. This was primarily accomplished through wetting of the soil, minimizing open excavation areas, and adjusting work during high wind events.

The particulate dust monitoring consisted of five stationary dust meters as well as one portable dust monitor. In addition to the dust meters, there was a weather monitoring station on the site was used to monitor wind speed, direction, and temperature in real time. This data was then used to adjust the stationary particulate meters' location to ensure they were located properly to effectively monitor generated dust.

The stationary dust monitors provided real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust meters were programmed and connected to the cellular network in order to send out automated text and e-mail alerts if the dust monitoring thresholds established for the Site were exceeded. The notification threshold was set at 0.1 milligrams per meter cubed ( $\text{mg}/\text{m}^3$ ), which was well below the site-specific action level of 0.621  $\text{mg}/\text{m}^3$ .

In general, one stationary dust meter was set in the upwind direction from the planned site work each morning, one or two dust meters were set immediately downwind of the active excavation areas, and two or three dust meters were set in a fan pattern downwind of the excavation areas. The Braun Intertec field professionals near the work area also utilized a portable dust meter that they carried with them. Braun Intertec also monitored particulate readings from a stationary dust meter located approximately 2 miles from the Site to monitor regional air quality to see if that affected particulate measurements.

Photos and a screenshot of the typical dust monitoring setup, and data interface is included in the photo log in Attachment C.

Dust monitors were left operating at the Site overnight and over the weekends even when the Site was not active to ensure dust levels remained below the SSAL.

Dust control measures were implemented during excavation as needed based on the dust monitor readings. The dust control measures consisted of primarily wetting the soils.

#### **C.1.j. Mercury Air Monitoring**

In addition to monitoring for particulates via the on-Site dust monitors, Braun Intertec collected bulk air samples downwind of the excavation areas. The bulk air samples were collected from two locations using pumps and filter cartridges. The two locations were sampled bi-weekly for a total of four samples per week. The bulk air samples were then sent to Bureau Veritas laboratory in Novi, Michigan, for analysis of mercury.

Mercury was not detected in any of the air samples collected and analyzed during the soil remediation at the Site.

Copies of the bulk air cartridge samples laboratory results are included in the weekly summary reports in Appendix F.

### **C.1.k. Storm Water Pollution Prevention and Sediment Control Plan**

An interim and phased Storm Water Management Plan was developed to control erosion and sediment on-Site. This work was detailed and approved in a Construction Site Storm Water Pollution Prevention Plan (SWPPP).

## **C.2. Offsite Soil Disposal, Re-use, and On-Site Clean Soil Re-use**

### **C.2.a. Offsite Soil Disposal**

Type 3 soil, as well excess Type 2 soil and other excavated soils that did not meet the MPCA Unregulated Fill criteria and/or could not be consolidated on-Site, were transported offsite for disposal at SKB. About 110,457.49 tons of impacted soil was excavated, loaded into trucks, manifested, and disposed of at the SKB landfill. The material disposed of at the landfill included 14,809.15 tons of Type 2 soils; 72,236.15 tons of Type 3 <10 mg/kg mercury soils (includes 10,506.45 tons of petroleum impacted soils/soils with intermixed debris); and 23,412.19 tons of Type 3 >10 mg/kg mercury soils. Landfill disposal documentation including manifests and scale tickets is included in Appendix G. Confirmation soil sample locations after remedial excavation are shown on Figure 5.

### **C.2.b. Clean Soil Offsite Reuse**

Excess excavated clean soil (native soil and topsoil) that met the MPCA Unregulated Fill criteria guidance document<sup>1</sup> analytical criteria was transported offsite for reuse at various locations. Prior to exporting soil for offsite re-use, soil screening was completed during test trenching of the areas targeted for potential excavation and export of soils from the Site. Site soils were visually observed for contamination, such as debris, possible asbestos containing material (ACM), soil staining, and/or odors. Soils were screened for headspace analysis of organic vapors following the MPCA-approved methodology using a photoionization device (PID) equipped with a 10.6 electron volt (eV) lamp.

No debris, odors, or staining of soils was observed in the soils planned for offsite reuse during sampling activities. PID readings for the reuse soils were within background levels, less than 5 parts per million (ppm).

---

<sup>1</sup> Best management practices for the off-site reuse of unregulated fill, Minnesota Pollution Control Agency, C-rem-1-01, March 2024

Braun Intertec coordinated with the Bolander excavation crew to excavate test trenches in various locations throughout the Site to facilitate soil sample collection of soils that were identified for potential export. The locations of the soil samples are shown on Figure 6.

Per the 2022 RAP, soil planned for offsite export were sampled at a rate of 1 composite sample per every 5,000 cubic yards of soil for laboratory analysis using samples collected from test pits completed in areas targeted for potential offsite reuse as fill.

A soil sample was collected from each of the test trench locations spanning from August 2023 to January 2024 and analyzed for the following parameters:

- Volatile organic compounds (VOCs) using United States Environmental Protection Agency (EPA) Method 8260.
- Polycyclic aromatic hydrocarbons (PAHs) using EPA Method 8270.
- Diesel Range Organics (DRO) with Silica Gel Cleanup and Gasoline Range Organics (GRO) using the Wisconsin Department of Natural Resources Method (WDNR).
- Eight Resource Conservation and Recovery Act (RCRA) metals using EPA Methods 6010 and 7471.

A summary of the soil analytical results for exported soils are provided in Tables 1 and 2. The complete laboratory reports with chain-of-custody forms are included in Attachment H.

The soil analytical results can be compared with the Soil Reference Values (SRVs) and Screening Soil Leaching Values (SLVs), also listed in Table 1 and 2. SRVs and SLVs are risk-based contaminant concentrations derived by the MPCA using risk assessment methodology, modeling, and risk management policy to guide investigation and cleanup actions. SRVs relate to direct-contact exposure scenarios and SLVs relate to potential leaching of contaminants to groundwater. Concentrations of contaminants in soil, SRVs, and SLVs are expressed in units of milligrams per kilogram (mg/kg).

The following provides a summary of the soil analytical results for soil evaluated for potential offsite reuse:

- No VOCs or DRO were detected at concentrations greater than or equal to the laboratory reporting limits in the soil samples.

- PAHs were detected at trace concentrations slightly over the laboratory reporting limits in only three out of 32 native soil samples analyzed under this scope of work. The detected PAH concentrations were below the respective Residential SRVs and SLVs by several orders of magnitude. The majority of the soil samples (29 out of 32) were non-detect for PAHs.
- The benzo(a)pyrene (BaP) equivalent, which is a measurement of the carcinogenic potency of several PAHs relative to benzo(a)pyrene, was calculated for the three samples with detected PAHs. The calculated BaP equivalents were well below (several orders of magnitude) their respective Residential SRVs. The highest detected concentration was 0.016 mg/kg compared to the residential use standard of 2.0 mg/kg
- Varying concentrations of the eight RCRA metals were detected in each of the soil samples analyzed. However, none of the metal concentrations exceeded the respective Residential SRVs and SLVs with the exception of mercury in topsoil samples Topsoil-2, Topsoil-2B.2 and Topsoil 2B.3.
- The soils from sample location Topsoil-2, Topsoil-2B.2 and Topsoil 2B.3 were segregated and disposed of at SKB in Rosemount, Minnesota. Confirmation samples from excavation sidewalls around samples Topsoil-2, Topsoil-2B.2 and Topsoil 2B.3 (Topsoil-2A, Topsoil-2B, Topsoil-2C, Topsoil-2D) confirmed that the remaining post excavation mercury concentrations were below Residential SRVs and SLVs.
- GRO/DRO was not detected at concentrations greater than or equal to the laboratory reporting limits in the soil samples.

### **C.2.c. Clean Soil On-Site Reuse**

Post remedial excavation native soils and sampled clean topsoil was field screened per the 2022 RAP and reused as either general or structural fill on-Site in an unrestricted manner. Clean soils that met geotechnical requirements were placed below the planned building, parking areas, and/or as backfill in the utility corridor(s). Clean soils that did not meet geotechnical requirements were used as general fill in greenspace areas of the Site.

### **C.3. Confirmation Soil Sampling**

As part of the RAP implementation, Braun Intertec performed confirmation soil sampling to verify Site cleanup standards were met and assisted with managing the exposure pathways. This section outlines the confirmation soil sample collection and analysis from excavated soil areas. Following excavation of

each impacted area, confirmation samples were collected from the base and sidewalls per the 2022 RAP. Samples collected were analyzed for a combination of the following parameters:

- DRO with and without silica gel cleanup using WDNR Method.
- GRO using WDNR Method.
- VOCs using EPA Method 8260.
- PAHs using EPA Method 8270C.
- Eight RCRA metals using EPA Method 6020/7471.
- Total Arsenic using EPA Method 6020.
- Total Mercury using EPA Method 7471.

If side wall or base confirmation sampling indicated that residual mercury, PAHs and/or arsenic was detected at concentrations above the Residential/Recreational SRVs in a base or sidewall sample, that area was further excavated approximately 2 to 3 feet from the previous excavation extent and resampled. This procedure was repeated until confirmation samples were below Residential/Recreational. While the 2022 RAP allowed for leaving soils in place that were at concentrations below the residential or commercial SRVs based upon planned future land use, soil were excavated until residential SRVs were met in the remedial excavation areas.

A summary for all confirmation soil sampling analytical results is provided in Tables 3 through 6 and sample locations are depicted on Figure 5. A summary of the laboratory reports is included in Appendix H. The table includes those confirmation samples that initially were above the cleanup goals, and then shows the subsequent confirmation samples that were collected after that area was excavated further. For example, sidewall confirmation sample “16th Tee SW-B”, had a mercury concentration greater than the residential SRV for Mercury, therefore that sidewall quadrant was then excavated another 2-3 feet further and resampled. The new confirmation sample collected after the additional excavation was labeled as “16th Tee SW-B.1”, which had an analytical result for mercury that was below the residential SRV, thus the excavation for that sidewall was complete. The process was used for all confirmation samples that resulted in additional excavation being required to remove the impacted soil.

### **C.3.a. Greens/Fringes Excavation**

Based on the previous investigation data, the greens and associated fringe areas contained mercury and/or arsenic concentrations in soil above residential/commercial SRVs (Type 3 soils). The greens and associated fringe areas were excavated as part of the response actions. Confirmation soil samples were collected from each green and fringe area. Each green and associated fringe area was divided into quadrants. Four discrete soil samples were collected per quadrant, and then composited into one confirmation base sample for each quadrant.

One discrete soil sample was collected for every 45 lineal feet of the excavation sidewall per quadrant. One sidewall sample was collected per quadrant comprised of the discrete soil samples collected from that quadrant. Sidewall samples were collected from the 0- to 6-inch interval at the excavation boundary. The 0- to 6-inch interval was collected and analyzed because the fungicide was applied topically, and this interval is most indicative of the potentially impacted conditions.

Base and sidewall samples collected from each green and associated fringe area were analyzed for mercury. Additionally, Hole 8th Green was also analyzed for arsenic.

The final soil confirmation sample analytical results for mercury were below laboratory detection limits or were detected at concentrations that are typical of background concentrations and below the Residential SRVs. Based on previous investigation data, arsenic was only analyzed at the Hole 8th Green location due to concentrations exceeding the Residential/Recreation standard. The concentrations of arsenic in the confirmation samples were detected below the Residential/Recreational SRV.

#### **C.3.b. Tee boxes and Rough Hot Spots**

Based on previous investigations, all tee boxes and some specific rough areas near Hole 4, Hole 5, Hole 6, Hole 8, and Hole 10 had mercury contamination exceeding the Residential/Recreational and/or Commercial/ Industrial SRV. Confirmation soil samples were collected to confirm mercury contaminated soils were removed during the implementation activities. Confirmation soil samples were collected in the same manner as for the greens/fringes described above.

The final soil confirmation sample analytical results from the tee boxes and specific rough areas were below laboratory detection limits or were detected at concentrations that are typical of background concentrations and below the Residential/Recreational SRVs.

#### **C.3.c. Fairways**

The former fairways were divided into decision units based on their size during the 2022 RI. Each decision unit had a composite sample collected and analyzed for mercury. Based on previous investigations, mercury was detected either at concentrations exceeding the Residential/Recreational SRV (Type 3 soils) or at concentrations above naturally occurring concentrations but below the SRVs (Type 2 Soils) in the upper 0.5 to 1.5 feet. The former fairways with Type 2 soils were excavated during redevelopment activities (See figure 3); however, since these soils were already identified as being below residential SRVs, per the 2022 RAP no confirmation soil samples were necessary from these areas. The remaining native soils from beneath the Type 2 areas Fairways were either re-used onsite, and/or if these native soils were targeted for offsite reuse they were further tested prior to re-use (see Section C.2.b and C.2.c).

The fairways with Type 3 soils (Figure 3) were excavated and confirmation soil samples were collected from the base of the excavations per the 2022 RAP. The confirmation base soil samples were sub-divided into various decision units up to a maximum of 30,000 square feet. In each decision unit, one composite sample was created from several discrete samples collected at the base of the excavation for mercury analysis. Composite samples were then created by combining all discrete samples from a decision unit at a similar depth into one composite sample per the protocols of the 2022 RI Work Plan. All samples collected from the fairways were analyzed for total mercury.

The final soil confirmation sample analytical results for mercury from the former fairways were below laboratory detection limits or were detected at concentrations that are typical of background concentrations and below the Residential SRVs.

#### **C.3.d. Excavation of Soils with Intermixed Debris**

During previous investigations (see Section B.2.d), debris-laden soils were encountered in the vicinity of the northwest portion of the Site near the former pool and tennis court area and the southeast portion of the Site near the former maintenance shed buildings and berm. Observed debris in the northwest corner consisted primarily of buried foundations, brick, concrete, and remnants of tennis court surfacing. Near the maintenance shed, debris soils consisting of brick, concrete, glass/clinkers, asphalt, and wood were encountered.

Additional, debris laden soils were encountered during implementation activities at the Site located near the former maintenance shed located along the eastern portion of the Site adjacent to McKnight Road and in between Hole 6th Green and Hole 7th Tee box.

Soil samples were collected for laboratory analysis from each excavation sidewall and base. Soil samples were collected at a rate of one 5-point composite sample and one grab sample per 2,500 CY. Composite samples were analyzed for PAHs, DRO with silica gel cleanup, and RCRA metals and grab samples were analyzed for VOCs and GRO.

The analytical results from the excavation of soils with intermixed debris were detected at concentrations well below the Residential/Recreational SRVs.

#### **C.3.e. Petroleum Soil Excavation**

As listed previously in Section B.2.d, petroleum contamination was identified (near the former maintenance shed area along the eastern portion of the Site adjacent with McKnight Road) associated with the former closed leak sites. The encountered petroleum-impacted soil areas were a minimum of 2 feet below proposed paved surfaces or a minimum of 4 feet below proposed green space areas.

According to the approved 2022 RAP, excavation was not required, and no confirmation soil samples were collected. The appropriate thickness of clean buffer soils from verified on-Site unrestricted native soils (Section C.3.c) was placed over these residual petroleum impacts (See Figure 4).

## **C.4. Construction Contingences**

### **C.4.a. Asbestos Containing Material**

At the start of excavation activities, on August 7, 2023, while excavating the 7th Green, the excavator encountered what appeared to be transite piping. Braun Intertec inspected the piping, and a sample was collected and analyzed for asbestos. Analytical results identified the transite piping as ACM. A copy of the report is provided in Appendix I. Additional excavation activities were conducted around the pipe to determine the extent of potential ACM. Investigation activities observed only one three-foot section of transite pipe that was in good condition. The pipe was containerized in polyethylene sheeting and consolidated with other ACM, which was then sent to the SKB landfill for disposal.

Nearing the end of mass remedial excavation on November 14, 2023, Bolander was excavating the northwest portion of the Site, where the former underground pool was located. While excavating the footings, they encountered transite piping that was around the perimeter of the former pool footprint, this was the same piping that was encountered around the 7<sup>th</sup> green and therefore was classified as ACM by the Braun Intertec licensed ACM inspector. Braun Intertec helped segregate the transite pipe from the other debris-laden soils. On November 15, 2023, Bolander contracted with Hummingbird Environmental Services of South Saint Paul, Minnesota, an asbestos abatement contractor, to dispose of the transite piping. The transite pipe pieces were placed in a roll-off dumpster, completely wrapped, tarped, and taken to SKB landfill for disposal. A copy of the manifest is provided in Appendix J.

### **C.4.b. Truck Gas Tank Leak**

On September 19, 2023, a Site worker's pickup truck was driving in the central portion of the Site, when it collided with a small piece of pipe from the golf course irrigation system that was protruding from the ground. The pipe punctured the fuel tank on the pickup truck and released a small quantity of unleaded gasoline. The driver drove a short distance before they realized that the truck was leaking gas. The release was reported to the MDA and MPCA project managers for this project were notified of the incident that day and after emailed approval from both entities, Braun Intertec coordinated next steps in accordance with the approved RAP.

Excavation of the petroleum impacted soils and soil sampling was in accordance with MPCA guidance document *Excavation of petroleum-contaminated soil and tank removal sampling, C-prp3-01*, dated March 2017. Petroleum impacted soils were removed until there were no field observations of impacts

remained (no odors or staining remained, and PID readings were less than 10 ppm). Confirmation soil samples were collected from the base and sidewall samples of the excavated area and were analyzed for DRO with and without silica gel cleanup, GRO, and VOCs. The impacted soils were excavated, stockpiled and covered with polyethylene sheeting pending the laboratory analytical results.

VOCs, DRO and GRO were not detected above laboratory detection limits in the conformation samples. A summary of the analytical results is included in Table 5 and the laboratory report is included in Appendix H.

#### **C.4.c. Stormwater Pond Sampling**

After significant rain events in October 2023, Braun Intertec sampled the stormwater runoff that had pooled in a pond on the east side of the Site. A water sample was taken at the pond and sampled for dissolved and total Mercury. The results were non-detect (below laboratory detection limits) for both dissolved mercury and total Mercury. A summary table of the results is provided in Table 6 and a copy of the laboratory report is included in Appendix H.

##### **C.4.c.1. Flammable Waste Trap Structure**

On November 7, 2023, during soil correction activities and the excavation of debris-laden and petroleum-impacted soils near the former maintenance shed, Bolander encountered an out of service remnant of what appears to be a flammable waste trap structure. The structure was empty, had no cover, and no associated piping. The dimensions of the structure were approximately 3.5 feet in diameter and 4.5-feet tall. Slight staining of soils below the structure was observed and corresponding PID readings were slightly elevated at 9.5 ppm. Bolander removed the material until the bottom of the area had no field indications of impacts (i.e. no staining, no odors, no elevated PID readings). A PID reading of 0.4 ppm was measured at the base of the excavation.

Confirmation soil samples were collected from the base and sidewalls of the excavated area and analyzed for DRO with and without silica gel cleanup, GRO, and VOCs. The impacted soils that were removed were added to the petroleum with intermixed debris soil stockpile. Soil analytical results were below laboratory detection limits for all compounds (see Table 5).

## **D. Quality Assurance/Quality Control**

A quality assessment of field procedures and analytical laboratory reports was performed to evaluate potential effects on data quality used to support project objectives. All applicable Braun Intertec SOPs were followed as prescribed unless otherwise noted in this report. Notable findings are provided in more detail below and incorporated, where necessary, into this report.

Samples were placed in clean, laboratory supplied containers, preserved, labeled, and transported to the Pace laboratory under refrigerated conditions using chain-of-custody procedures; Pace is certified by the Minnesota Department of Health (MDH) to conduct environmental sample analysis. Analyses were performed using EPA or other recognized standard procedures. Data were reviewed prior to release, quality-control guidelines were generally met, and the data are considered usable.

## **E. Conclusions**

Response actions were successfully implemented at the Site in accordance with the approved 2022 RAP. Contaminated soils were managed through a combination of primarily offsite disposal at a permitted landfill and there are two small areas of residual petroleum from previously closed leak sites which are left in place beneath clean buffer soils. Site engineering and dust controls were implemented throughout the mass excavation activities, and soil samples collected indicated results below applicable standards.

## **F. Recommendations**

The response actions were completed in general accordance with the MDA and MPCA approved 2022 RAP for the Site. All final soil cleanup confirmation samples collected during response action implementation verified constituents of concern concentrations below appropriate Residential/Recreation and/or Commercial/Industrial SRVs as applicable for the proposed use for the area. Based on the information provided in this report, no further environmental investigation or response actions are warranted for the Site. On behalf of SPPA, Braun Intertec is requesting the MDA AgVIC and MPCA VIC and PB Programs issue the following environmental assurances for the Site:

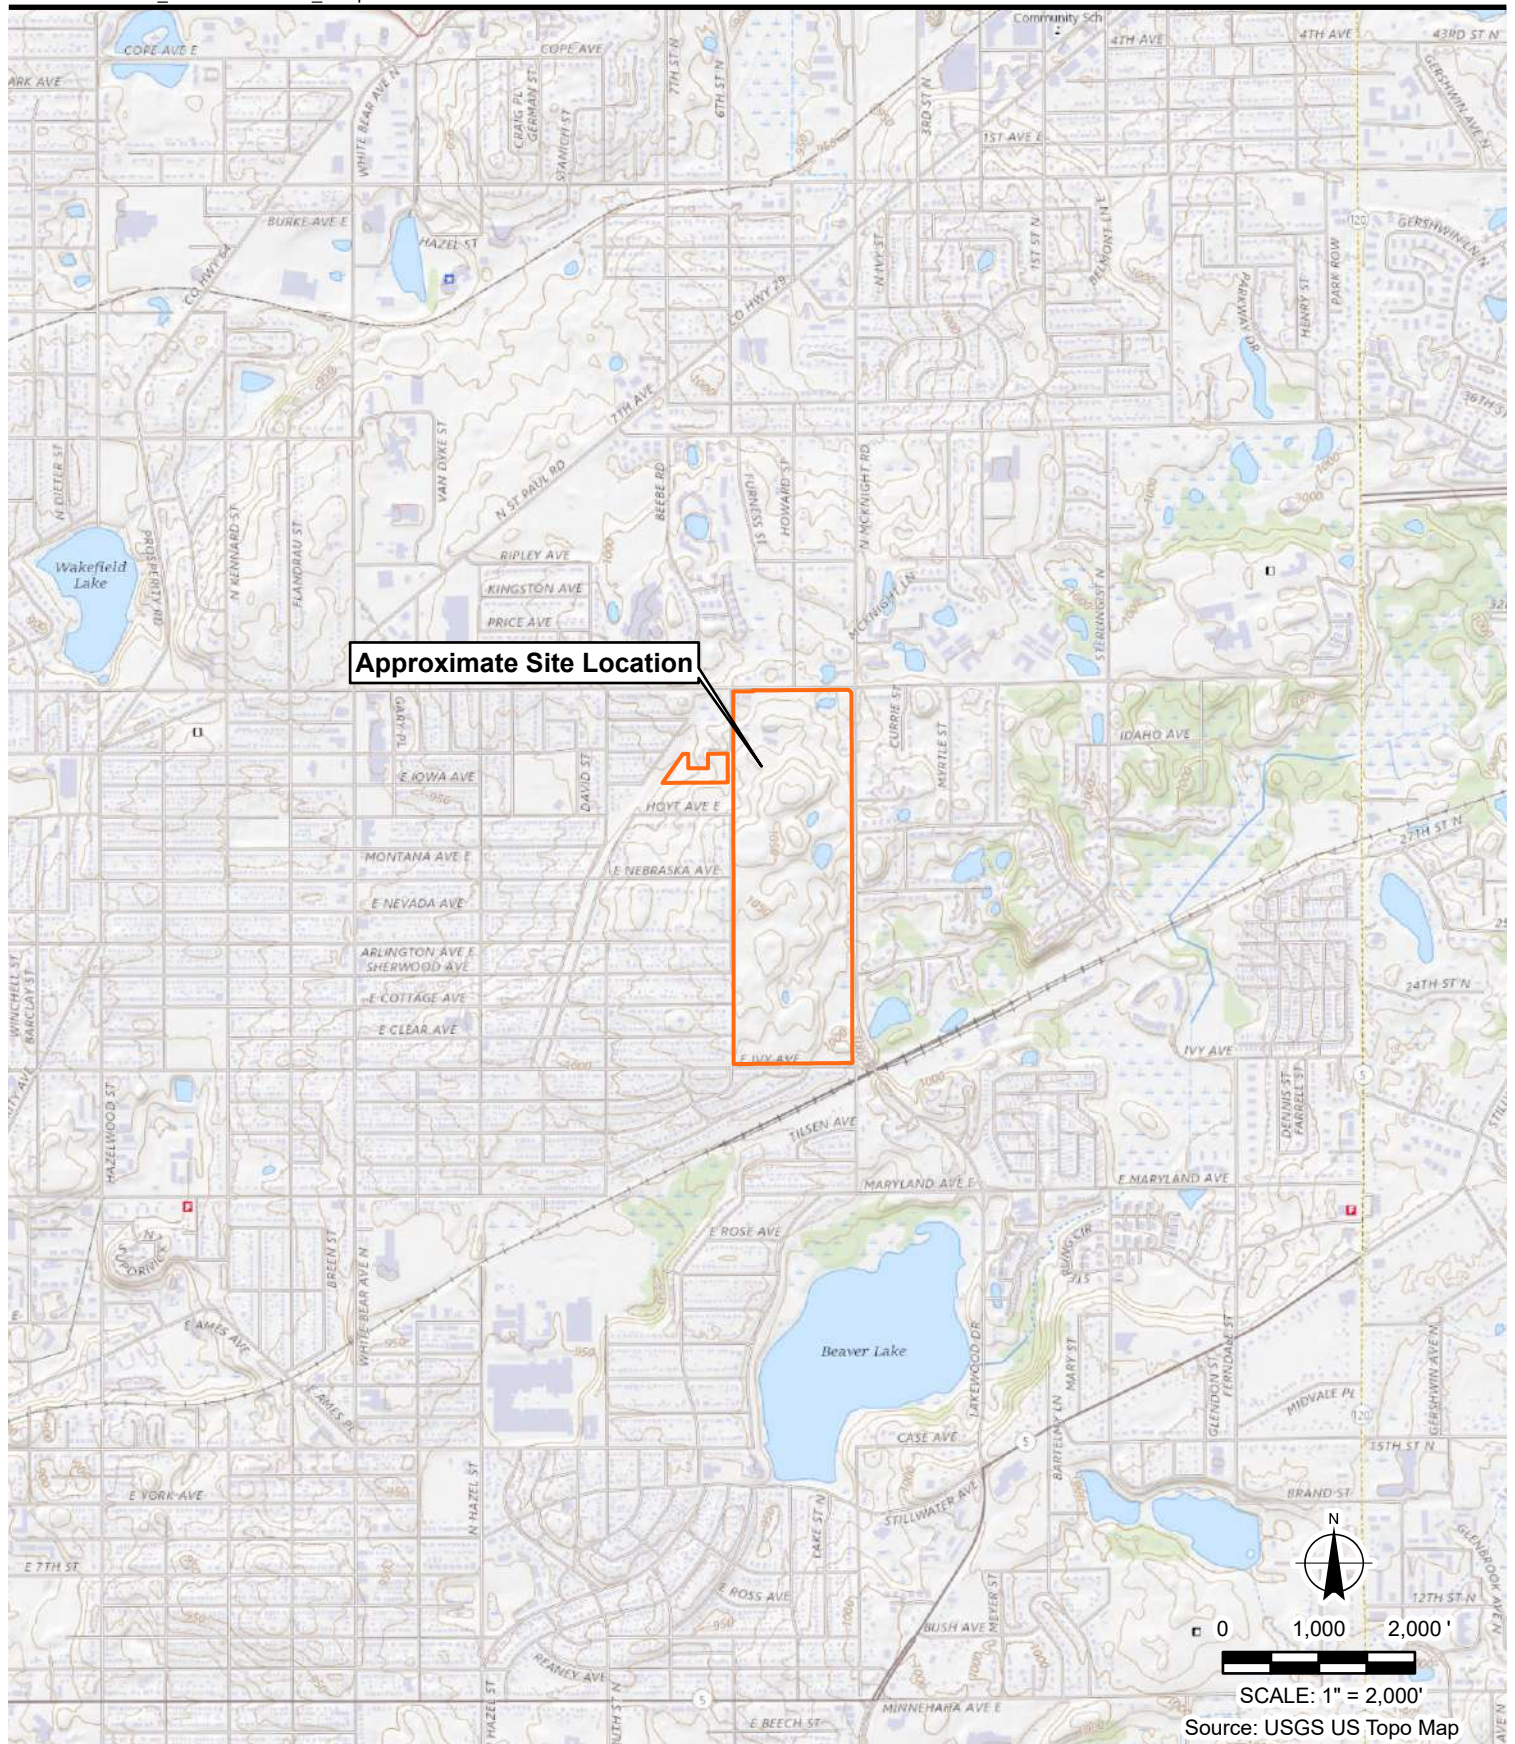

- RAP Implementation Approval Letters from the MDA and MPCA for the response actions taken at the Site in accordance with the 2022 RAP.
- A No Further Action letters from the MDA and MPCA for the response actions taken at the Site.

## **G. Standard of Care**

In performing its services, Braun Intertec used that degree of care and skill ordinarily exercised under similar circumstances by reputable members of its profession currently practicing in the same locality. No warranty, express or implied, is made.

Notes

(Ex) = Soils that were excavted and trasnported off-Site to SKB landfill for disposal.

Minnesota Pollution Control Agency (MPCA) Soil Reference Values (SRVs) updated in March 2023 and Soil Leaching Values (SLVs) updated in June 2013.

mg/kg = Milligrams per kilogram.

< = Not detected at or above the laboratory reporting limit indicated.

--- = Not analyzed or calculated for this parameter or not applicable.

BTV = Background Threshold Value. BTVs are not calculated health based SRVs. The MPCA calculated SRVs were determined to be below background values (MPCA guidance document c-r1-05, April 2021).

cPAH = Individual regulatory limit not established for this carcinogenic PAH; included in BaP equivalent calculation.

NE = Regulatory limit not established for this parameter.

RL = Reporting limits for other parameters that are not listed individually in this table because their concentrations were below reporting limits provided in the laboratory report.

[c] = Benzo(a)pyrene (BaP) equivalent is calculated based on the concentration and weighted toxicity of cPAHs; MPCA; 2009. If no cPAHs were detected above reasonable laboratory reporting limits the BaP equivalent is reported as 0 mg/kg per MPCA Remediation Division Policy; June 2011.

[e] = Reported result is total chromium, regulatory limit for chromium III and chromium VI are provided.

[f] = DRO/GRO concentrations greater than 100 mg/kg are not suitable for reuse as unregulated fill per MPCA Guidance Document c-rem1-01 "Best Management Practices for the Off-Site Reuse of Unregulated Fill" (February 2012).

Exceeds Residential/Recreational SRV
Exceeds Commercial/Industrial SRV
Exceeds SLV
Exceeds 100 mg/kg for DRO/GRO

[G+] Late peaks present outside the GRO window.

[T6] High boiling point hydrocarbons are present in the sample.

[M1] Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

[R1] RPD value was outside control limits.

[L1] Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

**Notes**

Minnesota Pollution Control Agency (MPCA) Residential/Recreational Soil Reference Values (R-SRVs) updated in March 2023.

mg/kg = Milligrams per kilogram.

< = Not detected at or above the laboratory reporting limit indicated.

--- = Not analyzed or calculated for this parameter or not applicable.

BTV = Background Threshold Value. BTVs are not calculated health based SRVs. The MPCA calculated SRVs were determined to be below background values (MPCA guidance document c-r1-05, April 2021).

[L1] = Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

[M0] = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

[M1] = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

[P6] = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

[R1] = RPD value was outside control limits.

Original Samples Exceeded R-SRV - highlighted in green means additional excavation was conducted and the resulting side wall or base was resampled. This process was repeated until the remaining soils met clean up standards per the RAP. The green shaded samples were all excavated and disposed of offsite at a permitted landfill

**Notes**

Minnesota Pollution Control Agency (MPCA) Soil Reference Values (SRVs) updated in March 2023 and Soil Leaching Values (SLVs) updated in June 2013.

mg/kg = Milligrams per kilogram.

< = Not detected at or above the laboratory reporting limit indicated.

--- = Not analyzed or calculated for this parameter or not applicable.

BTv = Background Threshold Value. BTVs are not calculated health based SRVs. The MPCA calculated SRVs were determined to be below background values (MPCA guidance document c-r1-05, April 2021).

cPAH = Individual regulatory limit not established for this carcinogenic PAH; included in BaP equivalent calculation.

NE = Regulatory limit not established for this parameter.

RL = Reporting limits for other parameters that are not listed individually in this table because their concentrations were below reporting limits provided in the laboratory report.

[c] = Benzo(a)pyrene (BaP) equivalent is calculated based on the concentration and weighted toxicity of cPAHs; MPCA; 2009. If no cPAHs were detected above reasonable laboratory reporting limits the BaP equivalent is reported as 0 mg/kg per MPCA Remediation Division Policy; June 2011.

[e] = Reported result is total chromium, regulatory limit for chromium III and chromium VI are provided.

[f] = DRO/GRO concentrations greater than 100 mg/kg are not suitable for reuse as unregulated fill per MPCA Guidance Document c-rem1-01 "Best Management Practices for the Off-Site Reuse of Unregulated Fill" (February 2012).

[L1] = Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

[T6] = High boiling point hydrocarbons are present in the sample.

Exceeds SLV

**SUBJECT: APPROVAL OF AGRICULTURAL CHEMICAL REVISED RESPONSE ACTION PLAN**

RE: SITE NAME: FORMER HILLCREST GOLF COURSE, SAINT PAUL  
MDA PROJECT NO: JAL101091523

Dear Mr. Hilleman:

Minnesota Department of Agriculture (MDA) Incident Response Unit staff has reviewed the Braun Intertec Revised Response Action Plan (RAP), dated September 1, 2022, for your company's facility in Saint Paul, Minnesota. The MDA hereby approves the Revised RAP with the incorporation of the following comments and qualifications:

1. **C.2.f. Non-Agricultural Chemicals:** This section states that a long list of non-agricultural chemicals will be addressed under the MDA VIC Program. Please note, the MDA does not have regulatory authority over non-agricultural chemicals and therefore the chemicals listed in this section should be addressed by the Minnesota Pollution Control Agency (MPCA).
2. **D.1.e. Rough Areas:** This section states that soils in the golf course rough areas generally have concentrations of mercury below the established MPCA Soil Reference Values and screening Soil Leaching Values. The MDA agrees that this is true of the rough areas where soil samples were collected. However, the MDA would like to note that large portions of the rough on site were not subjected to soil sampling, given the rough areas were not considered high risk areas for agricultural chemical contamination.
3. **D.2.a. Clubhouse Area:** The MDA AgVIC Program is listed as the lead regulatory authority for mercury impacts in soil within the Clubhouse Area. Based on the sampling data, the MDA does not view the mercury impacts identified in the Clubhouse Area to be from an agricultural chemical source.
4. **D.5. Southern Berm:** The MDA AgVIC Program is listed as the lead regulatory authority for mercury impacts in soil within the Southern Berm. Based on the sampling data, the MDA does not view the mercury impacts identified in the Southern Berm to be from an agricultural chemical source.
5. **G.2.a. Dust Control and Air Monitoring:** Please provide the Nuisance Dust Monitoring Plan/Specification to MDA for review and approval at least **90 days** prior to the anticipated beginning of corrective action site work. Additionally, in order to adequately document dust during excavation and grading activities, the MDA recommends that fixed air particulate monitors be installed along the perimeter of the site. Please include the use of fixed air particulate monitoring stations in addition to hand-held dust monitoring meters in the upcoming Nuisance Dust Monitoring Plan. When proposing air particulate

exposure standards in the Nuisance Dust Monitoring Plan, please provide justification for those standards. Lastly, the MDA requests that SPPA consider the use of a phone number to be posted near the site's entrance which can be used by the neighboring public to contact SPPA or its representatives at the site with questions or concerns regarding the corrective action site work.

6. **H.5.b.1. Minimizing Open Soil Areas:** This section lists several options for interim covers that could be employed to minimize open soil areas during corrective action excavation, including the use of native sand, sandy fill, clean organic soils, or imported soils. While the MDA is supportive of the use of interim covers, please consider employing some of the alternative options before resorting to the use of clean fill, given the possibility that removal of the clean fill for further excavation of impacted soils could contaminate the clean fill, ultimately generating more impacted soil.
7. **I.1. Field Report:** Please copy MDA project staff when distributing the Daily Field Report during corrective action site work.
8. **I.4. Plan Modification:** This section states, "Any proposed modifications to the RAP will be communicated to the MPCA in a timely manner." Please communicate any proposed modifications to the MDA, in addition to the MPCA.
9. **K. RAP Implementation Report:** The RAP Implementation Report should meet the requirements established for a Corrective Action Report by MDA Guidance Document 15 (<https://www.mda.state.mn.us/guidance-document-15-corrective-action-report>).

MDA staff should be notified at least one week in advance of the date site work is scheduled to begin. In addition, please submit a Corrective Action Report within sixty (60) days after the approved corrective action is completed. If subsequently obtained information indicates that the approved corrective actions are inappropriate or insufficient, MDA staff may require additional work or modifications to the approved work.

Please be advised this letter is subject to the disclaimers listed in Attachment A. In addition, you are responsible for ensuring that the approved corrective action complies with all applicable building, electrical and fire codes, and health department rules, and that all necessary state and local approvals are obtained.

If you have any questions about this project, please contact me at [josh.leable@state.mn.us](mailto:josh.leable@state.mn.us) or MDA technical staff person Stuart Orlowski at [stuart.n.orldowski@state.mn.us](mailto:stuart.n.orldowski@state.mn.us).

Sincerely,

Josh Leable, Project Manager  
Incident Response Unit  
Pesticide & Fertilizer Management Division

ATTACHMENT A  
DISCLAIMERS  
FORMER HILLCREST GOLF COURSE, SAINT PAUL, RAMSEY COUNTY, MINNESOTA  
MDA PROJECT NO: JAL101091523

1. Reservation of Authorities

The MDA Commissioner reserves the authority to take any appropriate actions with respect to any release, threatened release, or other conditions at the Site. The MDA Commissioner also reserves the authority to take such actions if the voluntary party does not proceed in the manner described in this letter or if actions taken or omitted by the voluntary party with respect to the Site contribute to any release or threatened release, or create an imminent and substantial danger to public health and welfare or the environment.

2. No MDA Assumption of Liability

The MDA, its Commissioner and staff do not assume any liability for any release, threatened release or other conditions at the Site or for any actions taken or omitted by the voluntary party with regard to the release, threatened release, or other conditions at the Site, whether the actions taken or omitted are in accordance with this letter or otherwise. The voluntary party is responsible for ensuring that the approved corrective action complies with all applicable building, electrical and fire codes and Health Department rules, and that all necessary state and local approvals are obtained.

3. Letter Based on Current Information

All statements, conclusions and representations in this letter are based upon information known to the MDA Commissioner and staff at the time this letter was issued. The MDA Commissioner and staff reserve the authority to modify or rescind any such statement, conclusion or representation and to take any appropriate action under his authority if the MDA Commissioner or staff acquires information after issuance of this letter that provides a basis for such modification or action.

4. Disclaimer Regarding Non-Agricultural Contamination

Approval of this investigation is based on its environmental merits for addressing the agricultural chemical contamination only. This letter does not apply to other types of contamination that may be present on the subject property.

5. Disclaimer Regarding Use or Development of the Property

The MDA, its Commissioner and staff do not warrant that the Site is suitable or appropriate for any particular use.

RE: Approval of Response Action Plan/Construction Contingency Plan  
Hillcrest Golf Course, 2200 Larpenteur Ave E, Saint Paul  
MPCA Site ID: BF0001281  
Billing ID: 29394  
PINs: 232922120003, 232922120004, 232922120006, 232922140002, 232922410001, and  
232922410002

Dear Monte Hilleman:

The Minnesota Pollution Control Agency (MPCA) staff in the Petroleum Brownfield (PB) and Voluntary Investigation and Cleanup (VIC) Programs has reviewed the Response Action Plan/Construction Contingency Plan (RAP/CCP) submitted for the Hillcrest Golf Course site, located at the address referenced above (the Site). The RAP/CCP dated September 1, 2022, was prepared and submitted on your behalf by Braun Intertec. This letter supersedes the RAP/CCP approval letter dated May 3, 2022, for the previous RAP/CCP dated March 1, 2022. Specifically, the RAP/CCP dated September 1, 2022, incorporates the MPCA's April 2022 revision of the mercury residential soil reference value change from 2.7 milligrams per kilogram (mg/kg) to 3.1 mg/kg.

The 112-acre Site was used for cultivated agriculture or grazing land prior to being developed as a golf course in the 1920s. A clubhouse is located on the northern portion of the Site and agricultural chemical storage buildings and a maintenance shop are located on the east side. Three separate petroleum releases were reported at the Site in the past and were issued the MPCA Leak IDs 5050, 6222, and 18327. All three leak sites have been issued closure by the MPCA. The golf course closed in 2017. The Saint Paul Port Authority plans to demolish the existing buildings and redevelop the Site with commercial/light industrial buildings along with low density residences, associated parking/drive areas, and recreational use.

A limited subsurface investigation was conducted at the Site in April 2019 and May of 2019. Nine soil samples were collected from soil borings and analyzed for polynuclear aromatic hydrocarbons (PAHs). Fourteen soil samples were collected and analyzed for the eight Resource Conservation and Recovery Act (RCRA) metals. Fifty-one shallow soil samples were collected from soil borings and analyzed for total mercury and two of these were also analyzed for mercury utilizing the toxicity characteristic leaching procedure (TCLP). Four soil samples were collected and analyzed for diesel range organics (DRO) and gasoline range organics (GRO). Four groundwater samples were collected; three of them were analyzed for RCRA metals, volatile organic compounds (VOCs), and DRO, and two were analyzed for PAHs and GRO. Mercury was detected in many of the soil samples and is deemed to result from past fungicide applications at the golf course.

As part of a remedial investigation completed at the Site between June of 2020 and November 2021, nine hand auger borings and eight test pits were completed in the vicinity of the clubhouse. Twenty-nine soil samples were collected and analyzed for total mercury and 17 for PAHs and RCRA metals. The PAHs were detected in one shallow soil sample location (DSS-2/2W) at a concentration greater than the MPCA's residential soil reference value (SRV). Mercury was detected in one shallow soil sample at a concentration slightly greater than the MPCA's commercial SRV; as noted above, the MPCA considers the presence of mercury in soil at the Site as attributable to past fungicide applications at the golf course.

The RAP/CCP proposes proper management and disposal of petroleum and PAH-contaminated soil encountered during construction activities. The RAP/CCP is approved, subject to the following conditions/clarifications:

1. This approval excludes contingency/response actions related to agricultural chemicals at the Site. Technical assistance for agricultural contamination is being provided by the Minnesota Department of Agriculture's Agricultural Voluntary Investigation and Cleanup (AgVIC) Program (Project number JAL101091523).
2. Confirmation soil samples shall be collected for laboratory analyses of PAHs, RCRA metals, DRO, and GRO from the base and sidewalls of excavations in areas with known soil impacts or where field observations indicate contamination may exist. Please refer to the MPCA sampling guidance for the recommended number of confirmation samples based on the size of the excavation.
3. Petroleum-contaminated soils encountered at the site, at or greater than 200 parts per million (PPM) as measured by a photoionization detector (PID), should be excavated and properly managed at an MPCA approved off-site treatment/disposal facility.
4. Petroleum-contaminated soils less than 200 PPM (PID) may be thin spread on-site under paved surfaces.
5. Petroleum-contaminated soils at or greater than 10 PPM (PID) encountered during the installation of underground utilities should be removed and properly managed as part of the RAP/CCP. If contamination remains at or above 10 PPM, a vapor barrier is required.
6. Imported soil and excess fill targeted for off-site reuse shall be from a native source and/or meet the MPCA's criteria for unregulated fill. Soils that do not meet unregulated fill criteria may not be used at the discretion of the contractor or other project personnel.
7. Any contaminated soils removed from the Site must be treated or disposed of in a method approved by the MPCA. Contaminated soils transported to an approved landfill must be in compliance with all state and local permits. Please include all transportation and handling manifests for such soils in the final implementation report.
8. This RAP/CCP approval is contingent on the applicant obtaining all other required state, federal, and local government permits.
9. The MPCA Brownfield Program staff does not review or approve dewatering actions, including the testing, discharge and/or treatment of groundwater, stormwater, or any other dewatering action.

An implementation report describing the completed response actions, sampling results, soil management and disposal, and imported soils shall be prepared and submitted to the MPCA. If the implementation report will not be submitted within one year of the date of this letter, please notify the MPCA project staff of the status of the project.

Approval of this plan does not suggest that any of the costs incurred will be eligible for reimbursement from the Petro Board.

This letter is subject to the disclaimers found in Attachment A. If you have any questions about this letter, please contact Andrew Nichols, Project Manager, at 651-757-2612 or by email at [andrew.nichols@state.mn.us](mailto:andrew.nichols@state.mn.us) or Mark Koplitz, Petroleum Brownfields Project Manager, at 651-757-2502 or by email at [mark.koplitz@state.mn.us](mailto:mark.koplitz@state.mn.us).

Sincerely,

**Disclaimers**

**Hillcrest Golf Course**

**MPCA Site ID: BF0001281**

**1. Reservation of authorities**

The Minnesota Pollution Control Agency (MPCA) Commissioner reserves the authority to take any appropriate actions with respect to any release, threatened release, or other conditions at the Site. The MPCA Commissioner also reserves the authority to take such actions if the voluntary party does not proceed in the manner described in this letter or if actions taken or omitted by the voluntary party with respect to the Site contribute to any release or threatened release or create an imminent and substantial danger to public health and welfare.

**2. No MPCA assumption of liability**

The MPCA, its Commissioner, and staff do not assume any liability for any release, threatened release or other conditions at the Site or for any actions taken or omitted by the voluntary party with regard to the release, threatened release, or other conditions at the Site, whether the actions taken or omitted are in accordance with this letter or otherwise.

**3. Letter based on current information**

All statements, conclusions, and representations in this letter are based upon information known to the MPCA Commissioner and staff at the time this letter was issued. The MPCA Commissioner and staff reserve the authority to modify or rescind any such statement, conclusion or representation and to take any appropriate action under the Commissioner's authority if the MPCA Commissioner or staff acquires information after issuance of this letter that provides a basis for such modification or action.

**4. Disclaimer regarding use or development of the property**

The MPCA, its Commissioner, and staff do not warrant that the Site is suitable or appropriate for any particular use.

**5. Disclaimer regarding investigative or response action at the property**

Nothing in this letter is intended to authorize any response action under Minn. Stat. § 115B.17, subd. 12.

**6. This approval does not supplant any applicable state or local stormwater permits, ordinances, or other regulatory documents.**

### **Weekly Progress Reports**

**(Note laboratory analytical reports from the weekly progress report are included in Appendixes F and H)**

August 18, 2023

Project B1903316.02

Re: Weekly Construction Summary Report: 8/07/2023 to 08/11/2023  
The Heights Development  
2200 Larpenteur Avenue East  
Saint Paul, Minnesota

Dear Project Team:

Braun Intertec Corporation is pleased to present this weekly construction update for The Heights Development project. Please find a summary of the past weekly construction activities.

### **Introduction**

The Saint Paul Port Authority owns the property located at 2200 Larpenteur Ave. east in St. Paul MN (Site). The Site was developed in the 1920s as a full size 18-hole private golf course/club known as the Hillcrest Golf Course. Golf course operations ceased in 2017 and the Site has been vacant since that time. The Saint Paul Port Authority is overseeing the redevelopment of the vacant golf course into a new multi-use development known as The Heights. The past use of the Site as a golf course has resulted in soil contamination in portions of the site. The primary contaminant is mercury from past fungicide use, with isolated area of arsenic impact as well as petroleum compounds in the formed maintenance area, and are if buried debris.

On Behalf of the Saint Paul Port Authority, Braun Intertec is overseeing the implementation of response actions at the Site to manage contaminated soils, sediments, buried debris and other media required to obtain environmental assurances and RAP implementation approvals from the Minnesota Department of Agriculture (MDA) and Minnesota Pollution Control Agency (MPCA) and facilitate planned redevelopment at the Site. The Site has been divided into 8 phases for the implementation of the soil response actions. Each phase will be excavated in turn and then proceed to the next phase until all of the contaminated soils at the site have been excavated and then transported offsite for proper disposal. Implementation of the response actions began on August 7th 2023.

This document provides a summary of the response actions that were completed at the Site between August 7th and August 11th 2023.

### **General Construction Update 8/07/2023 to 08/11/2023**

Soil excavation work began on Monday August 7<sup>th</sup> 2023. Prior to August 7<sup>th</sup>, small vegetation was cleared, a temporary fire hydrant was installed to provide water for the site, storm water and sediment controls were put into place, the required permits were acquired, and dust monitoring equipment was deployed to the site. During the first week of response action implementation the primary activities involved excavating impacted soils from greenways and fairways in the northeast section of the Site by pushing the soils into the center of that feature in preparation for then loading the soils into trucks for transportation to a landfill for disposal. During the first week of work, soils were push into the center of

the feature (windrow), but no soils were transported off site. Transportation to the landfill began the week of August 14<sup>th</sup>, 2023.

See Attachment 1, Photographic Log for recent photos. As of August 11, 2023, the following areas have been windrowed in preparation for transportation to the landfill.

- 1st Hole tee box and green
- 1<sup>st</sup> Fairway
- 2nd Hole tee box and green
- 2<sup>nd</sup> Fairway
- 3rd Hole green and tee box
- 3<sup>rd</sup> Fairway
- 4<sup>th</sup> Hole tee box
- 4<sup>th</sup> Fairway
- 5th Hole green
- 5th Fairway
- 6th Hole green
- 6<sup>th</sup> Fairway
- 7<sup>th</sup> Hole green
- 7th Fairway
- The Southern half of the 8<sup>th</sup> Fairway
- 17th Hole green
- 17<sup>th</sup> Fairway
- 18th Hole tee box and green
- 18<sup>th</sup> Fairway

The excavation progress to date is shown on Figure 1, in Attachment 2.

#### **Confirmation Soil Samples**

In order to confirm that the impacted soils have been removed completely a rigorous confirmation soil sampling plan is being implemented.

Confirmation soil samples have been collected from laboratory analysis from the areas that have been windrowed. Figure 1 shows the areas that have been sampled, which areas we have received data, and which areas have data pending as of August 11th 2023. The confirmation soil results received to date have shown that for the most part the excavations have successfully removed all of the impacts of soils. However there have been some coverage samples where the soils still had mercury concentrations above the queen of standards those areas will be further excavated and then resample to confirm that all of the effects have been removed. Figure 1 shows those areas which require additional excavation.

Confirmation soil sample results are included as Attachment 3, Soil Analytical Table.

#### **Particulate and Air Monitoring Results**

As part of the response actions, Braun Intertec is performing particulate monitoring across the Site to monitor for airborne dust. The particulate dust monitoring consists of multiple stationary dust meters as well as one portable dust monitor. In addition to the dust meters, there is a weather monitoring station on the site which is used to monitor wind speed, direction, and temperature. This data is then used to

adjust the location of the stationary particulate meters to ensure that they are located properly to effectively monitor generated dust. As part of the response action plan does control measures are implemented during excavation, this primarily is accomplished through wetting of the soils.

The stationary dust monitors provide real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust matters send out automated text and e-mail alerts if the dust monitoring thresholds established for the Site are exceeded. The notification threshold it currently set at 0.1 milligrams per meter cubed ( $\text{mg}/\text{m}^3$ ), which is well below the site-specific action level of  $0.621 \text{ mg}/\text{m}^3$ .

A screenshot of the typical dust monitoring setup, and data interface is included in the photo log in Attachment 1.

In general, one stationary dust meter is set in the upwind direction from the planned site work each morning, a second dust meter is set immediately downwind of the active excavation areas, then three dust meters are then set in a fan pattern downwind of the excavation areas. Finally, the Braun Intertec field staff professionals near the work area have a portable dust meter on them. Finally, Braun Intertec also monitors the readings from a stationary dust meter located approximately 2 miles from the site, from a meter that's part of a regional air quality study, that's used to monitor regional air quality to see if that affects our particulate measurements.

For the week of August 7th to 11th below the summary of the dust monitoring results:

Particulate Station ID	Average particulate Concentration ( $\text{mg}/\text{m}^3$ )	Maximum Concentration ( $\text{mg}/\text{m}^3$ )	Exceedances above SSAL ( $0.621 \text{ mg}/\text{m}^3$ )	Action Taken (if applicable)
A	0.039	0.62 (1 hour timeframe on 8/8/2023)	None	Additional dust control was implemented whenever above 0.2,
B	0.046	0.281	None	Additional dust control was implemented whenever above 0.2
C	0.02	0.275	None	
D	Deployed on 8/15/2023			
E	0.045	0.089	None	

SSAL = Site Specific Action Level

In addition to monitoring for particulates via the onsite dust meters, Braun Intertec is collecting bulk air samples down wind of the excavation areas. The bulk air samples are collected from two locations using pumps and filter cartridges. The two locations are sampled bi-weekly for a total of four samples per week. The bulk air cartridges samples are then sent to Bureau Veritas laboratory for analysis of mercury.

The analytical results for four samples that were collected for the week of August 7th to 11th were non-detect ( $<0.10 \text{ mg/m}^3$ ) for mercury in the air samples (see Attachment 4, Air Monitoring Laboratory Report).

**Planned Soil Excavation for next week**

During the week of August 14-18, 2023, we anticipate continuation of the following excavation areas:

- 8<sup>th</sup> Fairway
- 6th Hole Tee box
- 9<sup>th</sup> Hole Green and tee box

In addition, the windrowed soils will start to be transported to SKB landfill in Rosemount, Minnesota for proper disposal, which will limit the amount of new excavations that will be started during this week.

**Upcoming Schedule**

Braun Intertec anticipates another full week of excavation, soil transportation to SKB landfill and related sampling activities. In addition, demolition of the existing structures is scheduled to begin the week of August 14<sup>th</sup>.

If you have questions or concerns, please call Mark Keefer at 952.995.2665.

Sincerely,

BRAUN INTERTEC CORPORATION

Mark D. Keefer, PG  
Business Unit Leader, Principal Scientist,

**Notes**  
Minnesota Pollution Control Agency (MPCA) Soil Reference Values (SRVs) updated in March 2023 and Soil Leaching Values (SLVs) updated in June 2013.

mg/kg = Milligrams per kilogram.

< = Not detected at or above the laboratory reporting limit indicated.  
--- = Not analyzed or calculated for this parameter or not applicable.

BTV = Background Threshold Value. BTVs are not calculated health based SRVs. The MPCA calculated SRVs were determined to be below background values (MPCA guidance document c-r1-05, April 2021).

NE = Regulatory limit not established for this parameter.

RL = Reporting limits for other parameters that are not listed individually in this table because their concentrations were below reporting limits provided in the laboratory report.

**Soil Clean up Standards:**  
Arsenic Residential/Recreational SRV = 9 mg/kg  
Mercury Residential/Recreational SRV = 2.7 mg/kg  
Mercury SLV = 3.3 mg/kg

Exceeds Residential/Recreational SRV
Exceeds SLV

**TECHNICAL MEMORANDUM**

**SUBJECT**            **Weekly Environmental Response Action Update**

**SITE**                **The Heights Development, 2200 Larpenteur Avenue East, Saint Paul, Minnesota**

**DATE:**              **8/12/2023 to 8/18/2023**

**FROM:**             **Kenneth Larsen, PE, PG, Vice President, Principal Engineer - Braun Intertec**  
                         **Mark Keefer, PG, Principal Scientist - Braun Intertec**

Braun Intertec Corporation has prepared this Weekly Environmental Response Action Update for The Heights Development project on behalf of the Saint Paul Port Authority. The weekly update provides a summary of the environmental response actions that were completed at the Site between the listed period including identification of contaminated soil excavation locations, post excavation soil sample locations/results, related air/dust monitoring results, and a summary of the quantity of contaminated soil disposed of at the landfill for the given week and to date. A summary of anticipated environmental response actions for the following week is also provided. The information and data included in the weekly update was collected by Braun Intertec in accordance with the following documents:

- Revised Response Action Plan, Hillcrest Redevelopment Site Saint Paul, Minnesota MPCA Brownfields Site ID: BF0001281 MDA Project No.: JAL101091523, Dated September 1, 2022.
- Dust Monitoring Plan for Response Action Implementation, The Heights Development Former Hillcrest Golf Course Site, Saint Paul, Minnesota MPCA Brownfields Site ID: BR1281 MDA Project No.: JAL101091523, dated March 31, 2023.

**General Construction Update 8/12/2023 to 08/18/2023**

Soil excavation work began on Monday August 7<sup>th</sup>, 2023. During the week of August 7 to August 11<sup>th</sup>, the primary activities involved excavating impacted soils from greenways and fairways in the northeast section of the Site by pushing the soils into the center of that feature (windrow) in preparation for then loading the soils into trucks for transportation to a landfill for disposal.

For the week of August 12<sup>th</sup>, there was no additional excavation conducted during the second week of response actions, with the exception of the limited expansion of excavations where confirmation soil samples indicated there were analytical exceedances, to limit the amount of open soil at the Site.

On Monday, August 14<sup>th</sup>, 2023, the former clubhouse building was demolished. A hose was used to spray water during demolition activity and demolition debris is in the process of being hauled offsite. The foundation walls were observed for signs of asbestos-containing waterproofing. There were no obvious indications of waterproofing observed. Throughout the week, truck roads were built, to facilitate soil transport to the landfill, along roughs and fairways where analytical data results confirmed that the remaining soils were below the cleanup standards for mercury.

Transportation of mercury impacted soil for off-site disposal at SKB landfill began on Wednesday August 16<sup>th</sup> and continued through August 18, 2023. The soil removal began with soils where mercury was detected at concentrations greater than 10 mg/kg. End dump trucks lined with poly sheeting were used to transport these soils.

The following is a summary of the daily soil disposal.

Date	# of Truck Loads	Tons of Soil Disposed of at SKB Landfill	Notes
8/16/23	48	925.2	>10 mg/kg Mercury
8/17/23	92	1,707.74	>10 mg/kg Mercury
8/18/23	97	1,819.81	>10 mg/kg Mercury
Total Tons for Week = 4,452.75			

See Attachment 1, Photographic Log for recent photos. The excavation progress to date is shown on Figure 1 in Attachment 2.

#### **Confirmation Soil Samples**

In order to confirm that the impacted soils have been removed completely, a rigorous confirmation soil sampling plan is being implemented.

Confirmation soil samples have been collected for laboratory analysis from the areas that have been windrowed. Figure 1 shows the areas that have been sampled, the areas we have received data for, and the areas where we have data pending as of August 18th, 2023. The confirmation soil sample results received to date have shown that, for the most part, the excavations have successfully removed all the soils with impacts. However, there have been some confirmation samples where the soils still had mercury at concentrations above the applicable standards. Those areas will be further excavated and then resampled to confirm that all the remaining impacted soils have been removed.

Figure 1 shows the areas which require additional excavation. Confirmation soil sample results are included as Attachment 3, Soil Analytical Table.

#### **Particulate and Air Monitoring Results**

As part of the response actions, Braun Intertec is performing particulate monitoring across the Site to monitor for airborne dust. The particulate dust monitoring consists of multiple stationary dust meters as well as one portable dust monitor.

In addition to the dust meters, there is a weather monitoring station on the site which is used to monitor wind speed, direction, and temperature. This data is then used to adjust the stationary particulate meters to ensure that they are placed in locations that effectively monitor generated dust. As part of the response action plan, dust control measures (primarily the wetting of soils) are implemented during excavation.

The stationary dust monitors provide real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust monitors send out automated text and e-mail alerts if the dust monitoring thresholds established for the Site are exceeded. The notification threshold is currently set at 0.1 milligrams per meter cubed ( $\text{mg}/\text{m}^3$ ), which is well below the site-specific action level (SSAL) of  $0.621 \text{ mg}/\text{m}^3$ .

In general, one stationary dust meter is set in the upwind direction from the planned site work each morning, a second dust meter is set immediately downwind of the active excavation areas, and three dust meters are set in a fan pattern downwind of the excavation areas. The Braun Intertec field staff professionals near the work area also have a portable dust meter on them. Braun Intertec also monitors the readings from a stationary dust meter located approximately 2 miles from the site that is part of a regional air quality study to monitor regional air quality to see if that affects our particulate measurements.

Due to equipment rental difficulties, there were occasionally only three or four stationary dust monitors set up during onsite work this week. The equipment subcontractor was onsite various times throughout the week to troubleshoot and/or trade out faulty equipment. All five stationary units were operational by late morning Thursday, August 17.

One or two dust monitors were left operating at the site overnight and over the weekend when the Site was not active to ensure dust levels remained below the SSAL.

For the week of August 12th to 18<sup>th</sup>, the summary of the dust monitoring results is below:

Particulate Station ID	Average particulate Concentration ( $\text{mg}/\text{m}^3$ )	Maximum Concentration ( $\text{mg}/\text{m}^3$ )	Exceedances above SSAL ( $0.621 \text{ mg}/\text{m}^3$ )	Action Taken (if applicable)
A	0.034	0.721 (singular reading at 13:16:12 on 08/17/2023)	One singular reading at 13:16:12 on 08/17/2023	Additional dust control was implemented whenever above 0.2
B	0.045	0.544 (singular reading at 10:46:14 on 08/18/2023)	None	Additional dust control was implemented whenever above 0.2
C	0.017	0.536 (singular reading at 11:40:27 on 08/17/2023)	None	Additional dust control was implemented whenever above 0.2
D	0.025	0.513 (singular reading at 13:07:55 on 08/16/2023)	None	Additional dust control was implemented whenever above 0.2
E	0.072	1.83	Five discrete readings throughout the day on 08/18/2023; placement near active truck route and Air Quality Alert for wildfire smoke that day elevated readings	Additional dust control was implemented whenever above 0.2

SSAL = Site Specific Action Level

In addition to monitoring for particulates via the onsite dust meters, Braun Intertec is collecting bulk air samples down wind of the excavation areas. The bulk air samples are collected from two locations using pumps and filter cartridges. The two locations are sampled bi-weekly for a total of four samples per week. The bulk air cartridges samples are then sent to Bureau Veritas laboratory for analysis of mercury. At this time, we have not received the analytical data for the air samples collected the week of 8/12 to 8/19/2023.

#### **Upcoming Schedule**

For the week of August 21, 2023, Braun Intertec anticipates another full week of primarily hauling contaminated soil to SKB landfill for disposal, continued demolition of Site structures, limited soil excavation (where warranted) to address sampling results to date as approved by the MDA, creation of truck haul road on verified clean soils, select tree removals, and related sampling activities.

                          **Mark Keefer, PG, Principal Scientist - Braun Intertec**

Braun Intertec Corporation has prepared this Weekly Environmental Response Action Update for The Heights Development project on behalf of the Saint Paul Port Authority. The weekly update provides a summary of the environmental response actions that were completed at the Site between the listed period including identification of contaminated soil excavation locations, post excavation soil sample locations/results, related air/dust monitoring results, and a summary of the quantity of contaminated soil disposed of at the landfill for the given week and to date. A summary of anticipated environmental response actions for the following week is also provided. The information and data included in the weekly update was collected by Braun Intertec in accordance with the following documents:

- Revised Response Action Plan, Hillcrest Redevelopment Site Saint Paul, Minnesota MPCA Brownfields Site ID: BF0001281 MDA Project No.: JAL101091523, Dated September 1, 2022.
- Dust Monitoring Plan for Response Action Implementation, The Heights Development Former Hillcrest Golf Course Site, Saint Paul, Minnesota MPCA Brownfields Site ID: BR1281 MDA Project No.: JAL101091523, dated March 31, 2023.

**General Construction Update 8/21/2023 to 08/25/2023**

Soil excavation work began on Monday August 7<sup>th</sup>, 2023.

Transportation of mercury impacted soil continued Monday, August 21<sup>st</sup>, 2023 with Type 3 soils where mercury was detected at concentrations below 10 mg/kg and Type 2 soils with mercury concentrations below 2.7 mg/kg. Side dump trucks and end dump trucks were used to transport these soils from fairways and tee boxes. No soils exceeding concentrations of 10 mg/kg of mercury were hauled during the week of August 21<sup>st</sup> through August 25<sup>th</sup>, 2023.

Other activities on site during the week of August 21<sup>st</sup> through August 25<sup>th</sup>, 2023 included the demolition of maintenance buildings on the east side of the site, continued removal of clubhouse building debris, removal of cart path pavements, building of haul roads on verified clean soils, removal of transite pipe and tree removal and mulching for cover of haul roads. The transite pipe containing asbestos material was a total of 2 feet in length and has been wrapped properly in preparation for being hauled off site.

The following is a summary of the daily soil disposal.

Date	# of Truck Loads	Tons of Soil Disposed of at SKB Landfill	Soil Type	Notes
8/16/23	48	925.2	Type 3	>10 mg/kg Mercury
8/17/23	92	1,707.74	Type 3	>10 mg/kg Mercury
8/18/23	97	1,819.81	Type 3	>10 mg/kg Mercury
8/21/23	70	1,356.04	Type 3	<10 mg/kg Mercury
8/21/23	66	1,431.72	Type 2	<2.7 mg/kg Mercury
8/22/23	184	3,948.65	Type 3	<10 mg/kg Mercury
8/23/23	161	3,387.11	Type 3	<10 mg/kg Mercury
8/23/23	40	821.70	Type 2	<2.7 mg/kg Mercury
8/24/23	41	814.37	Type 3	>10 mg/kg Mercury
8/24/23	138	2,724.48	Type 3	<10 mg/kg Mercury
8/24/23	133	2,560.94	Type 2	<2.7 mg/kg Mercury
8/25/23	282	5,620.34	Type 3	<10 mg/kg Mercury
8/25/23	46	881.16	Type 2	<2.7 mg/kg Mercury
		<b>Total Tons to Date = 27,999.36</b>		

The areas that have been completely hauled off site as of Friday, August 25<sup>th</sup>, 2023 are as follows:

- Greens: 1<sup>st</sup>, 2<sup>nd</sup>, 9<sup>th</sup>, and 18<sup>th</sup>
- Fairways: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 8<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Tee Boxes: 1<sup>st</sup>

See Attachment 1, Photographic Log for recent photos. The excavation progress to date is shown on Figure 1 in Attachment 2.

#### **Confirmation Soil Samples**

In order to confirm that the impacted soils have been removed completely, a rigorous confirmation soil sampling plan is being implemented.

Confirmation soil samples have been collected for laboratory analysis from the areas that have been windrowed. Figure 1 shows the areas that have been sampled, the areas we have received data for, and the areas where we have data pending as of August 28<sup>th</sup>, 2023. The confirmation soil sample results received to date have shown that, for the most part, the excavations have successfully removed all the

soils with impacts. However, there have been some confirmation samples where the soils still had mercury at concentrations above the applicable standards. Those areas will be further excavated and then resampled to confirm that all the remaining impacted soils have been removed.

Figure 1 shows the areas which require additional excavation. Confirmation soil sample results are included as Attachment 3, Soil Analytical Table.

### **Particulate and Air Monitoring Results**

As part of the response actions, Braun Intertec is performing particulate monitoring across the Site to monitor for airborne dust. The particulate dust monitoring consists of multiple stationary dust meters as well as one portable dust monitor.

In addition to the dust meters, there is a weather monitoring station on the site which is used to monitor wind speed, direction, and temperature. This data is then used to adjust the stationary particulate meters to ensure that they are placed in locations that effectively monitor generated dust. As part of the response action plan, dust control measures (primarily the wetting of soils) are implemented during excavation.

The stationary dust monitors provide real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust monitors send out automated text and e-mail alerts if the dust monitoring thresholds established for the Site are exceeded. The notification threshold is currently set at 0.1 milligrams per meter cubed ( $\text{mg}/\text{m}^3$ ), which is well below the site-specific action level (SSAL) of  $0.621 \text{ mg}/\text{m}^3$ .

In general, one stationary dust meter is set in the upwind direction from the planned site work each morning, a second dust meter is set immediately downwind of the active excavation areas, and three dust meters are set in a fan pattern downwind of the excavation areas. Beginning August 23, 2023 and moving forward, the dust meters were placed in similar positions each day. Station A is typically placed upwind from active excavation areas, Stations B and C are placed immediately downwind of excavation areas, and Stations D and E were set further downwind of excavation nearer to the Site perimeter. The Braun Intertec field staff professionals near the work area also have a portable dust meter on them. Braun Intertec also monitors the readings from a stationary dust meter located approximately 2 miles from the site that is part of a regional air quality study to monitor regional air quality to see if that affects our particulate measurements.

One or two dust monitors were left operating at the site overnight and over the weekend when the Site was not active to ensure dust levels remained below the SSAL.

While exceedances in dust levels did occur, they were short in duration, lasting no longer than a few minutes. The Exceedances were observed to be a result of disturbances, typically cause by trucks driving along clean soils on the built haul roadways and dust control measures in the parking lot and on Larpenteur Ave (i.e. sweeping of dirt from paved surfaces). There was no visible dust observed from windrows and stockpiles of mercury contaminated soil.

For the week of August 20<sup>th</sup> to 26<sup>th</sup>, the summary of the dust monitoring results is below:

Particulate Station ID	Average particulate Concentration (mg/m <sup>3</sup> )	Maximum Concentration (mg/m <sup>3</sup> )	Exceedances above SSAL (0.621 mg/m <sup>3</sup> )	Action Taken (if applicable)
A	0.031	1.09 (singular reading at 7:43:42 on 08/25/2023)	Two consecutive readings from 7:43:27 to 7:43:42 on 08/25/2023; occurred while street was being swept for dust control.	Additional dust control was implemented whenever above 0.2
B	0.044	2.66 (singular reading at 16:51:02 on 08/23/2023)	Several discrete readings from 08/21/2023 to 08/23/2023; placement near active truck route.	Additional dust control was implemented whenever above 0.2
C	0.035	4.73 (singular reading at 14:48:16 on 08/23/2023)	Several discrete readings on 8/23/23 and 8/25/23; placement near active truck route.	Additional dust control was implemented whenever above 0.2
D	0.034	0.499 (singular reading at 11:43:46 on 08/23/2023)	None	Additional dust control was implemented whenever above 0.2
E	0.057	0.669 (singular reading at 11:40:45 on 08/25/2023)	One discrete reading at 11:40:45 on 08/25/23, placement near active tree mulching activities	Additional dust control was implemented whenever above 0.2

SSAL = Site Specific Action Level

In addition to monitoring for particulates via the onsite dust meters, Braun Intertec is collecting bulk air samples down wind of the excavation areas. The bulk air samples are collected from two locations using pumps and filter cartridges. The two locations are sampled bi-weekly for a total of four samples per week. The bulk air cartridges samples are then sent to Bureau Veritas laboratory for analysis of mercury. The analytical results of all 4 samples collected the week of 8/12/23 to 8/18/23 were non-detect (<0.10 mg/m<sup>3</sup>). Copies of the lab reports are included as Attachment 4. At this time, we have not received the analytical data for the air samples collected the week of 8/21 to 8/25/2023.

### **Upcoming Schedule**

For the week of August 28, 2023, Braun Intertec anticipates another full week of primarily hauling contaminated soil to SKB landfill for disposal, continued demolition of Site structures, soil excavation of fairways as approved by the MDA, creation of truck haul road on verified clean soils, select tree removals, and related sampling activities.

Notes

Exceeds R-SRV

Minnesota Pollution Control Agency (MPCA) Residential/Recreational Soil Reference Values (R-SRVs)  
mg/kg = Milligrams per kilogram.  
< = Not detected at or above the laboratory reporting limit indicated.  
--- = Not analyzed or calculated for this parameter or not applicable.  
BTV = Background Threshold Value. BTVs are not calculated health based SRVs. The MPCA calculated  
[L1] = Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this  
[M0] = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control  
[M1] = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample  
[P6] = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration  
[R1] = RPD value was outside control limits.

## **Mercury Air Sample Analytical Results**

**TECHNICAL MEMORANDUM**

**SUBJECT**            **Weekly Environmental Response Action Update**

**SITE**                **The Heights Development, 2200 Larpenteur Avenue East, Saint Paul, Minnesota**

**DATE:**              **8/28/2023 to 9/1/2023**

**FROM:**             **Kenneth Larsen, PE, PG, Vice President, Principal Engineer - Braun Intertec**  
                         **Mark Keefer, PG, Principal Scientist - Braun Intertec**

Braun Intertec Corporation has prepared this Weekly Environmental Response Action Update for The Heights Development project on behalf of the Saint Paul Port Authority. The weekly update provides a summary of the environmental response actions that were completed at the Site between the listed period including identification of contaminated soil excavation locations, post excavation soil sample locations/results, related air/dust monitoring results, and a summary of the quantity of contaminated soil disposed of at the landfill for the given week and to date. A summary of anticipated environmental response actions for the following week is also provided. The information and data included in the weekly update was collected by Braun Intertec in accordance with the following documents:

- Revised Response Action Plan, Hillcrest Redevelopment Site Saint Paul, Minnesota MPCA Brownfields Site ID: BF0001281 MDA Project No.: JAL101091523, Dated September 1, 2022.
- Dust Monitoring Plan for Response Action Implementation, The Heights Development Former Hillcrest Golf Course Site, Saint Paul, Minnesota MPCA Brownfields Site ID: BR1281 MDA Project No.: JAL101091523, dated March 31, 2023.

**General Construction Update 8/28/2023 to 9/1/2023**

Soil excavation work began on Monday August 7<sup>th</sup>, 2023.

Transportation of mercury impacted soil continued Monday, August 28, 2023, with Type 3 soils where mercury was detected at concentrations above 10 mg/kg, Type 3 soils with mercury concentrations below 10 mg/kg, and Type 2 soils with mercury concentrations below 2.7 mg/kg. Side dump trucks and end dump trucks were used to transport these soils from greens, fairways, and tee boxes. Soils with mercury concentrations exceeding 10 mg/kg were transported in end dump trucks lined with poly sheeting. All trucks were covered prior to leaving the site.

Other activities on site during the week of August 28<sup>th</sup> through September 1<sup>st</sup>, 2023 included the continued demolition of maintenance buildings on the east side of the site, continued removal of clubhouse building debris, removal of the former golf course paved cart paths, building of haul roads on verified clean soils, and tree removal and mulching for cover of haul roads.

The following is a summary of the daily soil disposal.

Date	# of Truck Loads	Tons of Soil Disposed of at SKB Landfill	Soil Type	Notes
8/16/23	48	925.2	Type 3	>10 mg/kg Mercury
8/17/23	92	1,707.74	Type 3	>10 mg/kg Mercury
8/18/23	97	1,819.81	Type 3	>10 mg/kg Mercury
8/21/23	70	1,356.04	Type 3	<10 mg/kg Mercury
8/21/23	66	1,431.72	Type 2	<2.7 mg/kg Mercury
8/22/23	184	3,948.65	Type 3	<10 mg/kg Mercury
8/23/23	161	3,387.11	Type 3	<10 mg/kg Mercury
8/23/23	40	821.70	Type 2	<2.7 mg/kg Mercury
8/24/23	41	814.37	Type 3	>10 mg/kg Mercury
8/24/23	138	2,724.48	Type 3	<10 mg/kg Mercury
8/24/23	133	2,560.94	Type 2	<2.7 mg/kg Mercury
8/25/23	282	5,620.34	Type 3	<10 mg/kg Mercury
8/25/23	46	881.16	Type 2	<2.7 mg/kg Mercury
8/28/23	68	1,329.50	Type 3	>10mg/kg Mercury
8/28/23	172	3,605.67	Type 3	<10 mg/kg Mercury
8/29/23	4	79.32	Type 3	>10 mg/kg Mercury
8/29/23	262	5,312.72	Type 3	<10 mg/kg Mercury
8/29/23	13	266.24	Type 2	<2.7 mg/kg Mercury
8/30/23	81	1,562.22	Type 3	>10 mg/kg Mercury
8/30/23	34	645.46	Type 3	<10 mg/kg Mercury
8/30/23	166	3,365.24	Type 2	<2.7 mg/kg Mercury
8/31/23	72	1,336.53	Type 3	>10 mg/kg Mercury
8/31/23	215	4,682.09	Type 3	<10 mg/kg Mercury
9/1/23	60	1,108.67	Type 3	>10 mg/kg Mercury
9/1/23	127	2,641.88	Type 3	<10 mg/kg Mercury
9/1/23	97	2,211.42	Type 2	<2.7 mg/kg Mercury
		<b>Total Tons to Date = 56,146.22</b>		

The areas that have been excavated as of Friday, September 1<sup>st</sup>, 2023, are as follows:

- Greens: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 15, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Fairways: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Tee Boxes: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 17<sup>th</sup>, 18<sup>th</sup>
- Hot Spots: 8<sup>th</sup> hole rough, 6<sup>th</sup> hole rough, 5<sup>th</sup> hole rough

Based upon the work to date, the remedial excavation work is approximately 75% complete as of September 1, 2023.

See Attachment 1, Photographic Log for recent photos. The excavation progress to date is shown on Figure 1 in Attachment 2.

#### **Confirmation Soil Samples**

In order to confirm that the impacted soils have been removed completely, a rigorous confirmation soil sampling plan is being implemented.

Confirmation soil samples have been collected for laboratory analysis from the areas that have been windrowed. Figure 1 shows the areas that have been sampled, the areas we have received data for, and the areas where we have data pending as of September 1<sup>st</sup>, 2023. The confirmation soil sample results received to date have shown that, for the most part, the excavations have successfully removed all the soils with impacts. However, there have been some confirmation samples where the soils still had mercury at concentrations above the applicable standards. Those areas will be further excavated and then resampled to confirm that all the remaining impacted soils have been removed.

Figure 1 shows the areas which require additional excavation. Confirmation soil sample results are included as Attachment 3, Soil Analytical Table.

#### **Particulate and Air Monitoring Results**

As part of the response actions, Braun Intertec is performing particulate monitoring across the Site to monitor for airborne dust. The particulate dust monitoring consists of multiple stationary dust meters as well as one portable dust monitor.

In addition to the dust meters, there is a weather monitoring station on the site which is used to monitor wind speed, direction, and temperature. This data is then used to adjust the stationary particulate meters to ensure that they are placed in locations that effectively monitor generated dust. As part of the response action plan, dust control measures (primarily the wetting of soils) are implemented during excavation.

The stationary dust monitors provide real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust monitors send out automated text and e-mail alerts if the dust monitoring thresholds established for the Site are exceeded. The notification threshold is currently set at 0.1 milligrams per meter cubed ( $\text{mg}/\text{m}^3$ ), which is well below the site-specific action level (SSAL) of  $0.621 \text{ mg}/\text{m}^3$ .

In general, one stationary dust meter is set in the upwind direction from the planned site work each morning, a second dust meter is set immediately downwind of the active excavation areas, and three dust meters are set in a fan pattern downwind of the excavation areas. Beginning August 23, 2023, and moving forward, the dust meters were placed in similar positions each day. Station A is typically placed upwind from active excavation areas, Stations B and C are placed immediately downwind of excavation areas, and Stations D and E were set further downwind of excavation nearer to the Site perimeter. The Braun Intertec field staff professionals near the work area also have a portable dust meter on them. Braun Intertec also monitors the readings from a stationary dust meter located approximately 2 miles

from the site that is part of a regional air quality study to monitor regional air quality to see if that affects our particulate measurements.

One or two dust monitors were left operating at the site overnight and over the weekend when the Site was not active to ensure dust levels remained below the SSAL.

While exceedances in dust levels did occur, they were short in duration, lasting no longer than a few minutes. The exceedances were observed to be a result of disturbances, typically caused by trucks and construction equipment driving along clean soils on the built haul roadways and dust control measures in the parking lot and on Larpenteur Ave (i.e., sweeping of dirt from paved surfaces). There was no visible dust observed from windrows and stockpiles of mercury contaminated soil.

For the week of August 27<sup>th</sup> to September 2, the summary of the dust monitoring results is below:

Particulate Station ID	Average Particulate Concentration (mg/m <sup>3</sup> )	Maximum Concentration (mg/m <sup>3</sup> )	Exceedances above SSAL (0.621 mg/m <sup>3</sup> )	Action Taken (if applicable)
A	0.040	3.18 (singular reading at 11:28:59 on 09/01/2023)	Several discrete readings from 08/30/2023 to 09/01/2023. Two consecutive readings from 11:06:44 to 11:06:59 on 09/01/2023; occurred while demo debris hauling and rough excavation (clean soil) was happening nearby.	Additional dust control was implemented whenever above 0.2
B	0.080	13.2 (discrete occurrence at 10:09:14 on 09/01/2023)	Several readings from 08/28/2023 to 09/01/2023; placement directly adjacent to active truck route/excavations. On 08/31/2023, a period of mostly elevated readings occurred from about 14:40 to 15:10 (station placed N of 7 <sup>th</sup> green during 7 <sup>th</sup> FW excavation). On 09/01/2023, a period of elevated readings occurred from 10:25:14 to 10:42:14 when device antenna broke during transport to new	Additional dust control was implemented whenever above 0.2

			location (thus giving artificially high readings).	
C	0.059	1.91 (singular reading at 12:32:11 on 08/31/2023)	Several discrete readings on 8/28/23, 08/29/23, and 8/31/23; placement near active truck route or tree removal activity.	Additional dust control was implemented whenever above 0.2
D	0.023	2.17 (singular reading at 16:27:58 on 08/31/2023)	Several discrete readings through the week; placement near active truck routes or tree removal activity.	Additional dust control was implemented whenever above 0.2
E	0.041	0.924 (singular reading at 12:05:21 on 08/28/2023)	One discrete reading at 12:05:21 on 08/28/2023, placement near active tree mulching activities	Additional dust control was implemented whenever above 0.2

SSAL = Site Specific Action Level

In addition to monitoring for particulates via the onsite dust meters, Braun Intertec is collecting bulk air samples down wind of the excavation areas. The bulk air samples are collected from two locations using pumps and filter cartridges. The two locations are sampled bi-weekly for a total of four samples per week. The bulk air cartridges samples are then sent to Bureau Veritas laboratory for analysis of mercury. The analytical results of all sample results received so far have been non-detect ( $<0.10 \text{ mg/m}^3$ ). Bureau Veritas laboratory had their mercury instruments have a maintenance issue the week of 8/21, and are resolving to fix the issue, therefore the air testing results are delayed at this time. At this time, we have not received the analytical data for the air samples collected the week of 8/21 to 8/25/2023 or the week of 08/28 to 09/01.

#### **Upcoming Schedule**

For the week of September 5, 2023, Braun Intertec anticipates another full week of primarily hauling contaminated soil to SKB landfill for disposal, continued demolition of Site structures, soil excavation of fairways as approved by the MDA, creation of truck haul road on verified clean soils, select tree removals, and related sampling activities.

**Notes**

\* Sample is a supplemental confirmation sample collected after additional excavation/soil removal was performed due to the initial confirmation sample having a concentration above the clean up level.

Minnesota Pollution Control Agency (MPCA) Residential/Recreational Soil Reference Values (R-SRVs)  
mg/kg = Milligrams per kilogram.  
< = Not detected at or above the laboratory reporting limit indicated.  
--- = Not analyzed or calculated for this parameter or not applicable.  
BTV = Background Threshold Value. BTVs are not calculated health based SRVs. The MPCA calculated  
[L1] = Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this  
[M0] = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control  
[M1] = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample  
[P6] = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration  
[R1] = RPD value was outside control limits.

## **Mercury Air Sample Analytical Results**

**TECHNICAL MEMORANDUM**

**SUBJECT**        **Weekly Environmental Response Action Update**

**SITE**            **The Heights Development, 2200 Larpenteur Avenue East, Saint Paul, Minnesota**

**DATE:**          **9/11/2023 to 9/15/2023**

**FROM:**          **Kenneth Larsen, PE, PG, Vice President, Principal Engineer - Braun Intertec**  
                     **Mark Keefer, PG, Principal Scientist - Braun Intertec**

Braun Intertec Corporation has prepared this Weekly Environmental Response Action Update for The Heights Development project on behalf of the Saint Paul Port Authority. The weekly update provides a summary of the environmental response actions that were completed at the Site between the listed period including identification of contaminated soil excavation locations, post excavation soil sample locations/results, related air/dust monitoring results, and a summary of the quantity of contaminated soil disposed of at the landfill for the given week and to date. A summary of anticipated environmental response actions for the following week is also provided.

The information and data included in the weekly update was collected by Braun Intertec in accordance with the following documents:

- Revised Response Action Plan, Hillcrest Redevelopment Site Saint Paul, Minnesota MPCA Brownfields Site ID: BF0001281 MDA Project No.: JAL101091523, Dated September 1, 2022.
- Dust Monitoring Plan for Response Action Implementation, The Heights Development Former Hillcrest Golf Course Site, Saint Paul, Minnesota MPCA Brownfields Site ID: BR1281 MDA Project No.: JAL101091523, dated March 31, 2023.

**General Construction Update 9/11/2023 to 9/15/2023**

Soil excavation work began on Monday August 7<sup>th</sup>, 2023.

Transportation of mercury impacted soil continued the week of Monday, September 11, 2023, with Type 3 soils where mercury was detected at concentrations above 10 mg/kg, Type 3 soils with mercury concentrations below 10 mg/kg, and Type 2 soils with mercury below 2.7 mg/kg. Side dump trucks and end dump trucks were used to transport these soils from greens, fairways, rough hot spots, and tee boxes. Soils with mercury concentrations exceeding 10 mg/kg were transported in end dump trucks lined with poly sheeting. All trucks were covered prior to leaving the site. Due to rain, no soil was hauled from the Site on Friday, September 15.

Other activities on site during the week of September 11<sup>th</sup> through 15<sup>th</sup>, 2023 included the continued demolition of maintenance buildings on the east side of the site, continued removal of clubhouse building debris, building of haul roads on verified clean soils, placing mulch over the haul roads to help control dust and clean truck tires, and tree removal and mulching for cover of haul roads.

The following is a summary of the daily soil disposal.

Date	# of Truck Loads	Tons of Soil Disposed of at SKB Landfill	Soil Type	Notes
8/16/23	48	925.2	Type 3	>10 mg/kg Mercury
8/17/23	92	1,707.74	Type 3	>10 mg/kg Mercury
8/18/23	97	1,819.81	Type 3	>10 mg/kg Mercury
8/21/23	70	1,356.04	Type 3	<10 mg/kg Mercury
8/21/23	66	1,431.72	Type 2	<2.7 mg/kg Mercury
8/22/23	184	3,948.65	Type 3	<10 mg/kg Mercury
8/23/23	161	3,387.11	Type 3	<10 mg/kg Mercury
8/23/23	40	821.70	Type 2	<2.7 mg/kg Mercury
8/24/23	41	814.37	Type 3	>10 mg/kg Mercury
8/24/23	138	2,724.48	Type 3	<10 mg/kg Mercury
8/24/23	133	2,560.94	Type 2	<2.7 mg/kg Mercury
8/25/23	282	5,620.34	Type 3	<10 mg/kg Mercury
8/25/23	46	881.16	Type 2	<2.7 mg/kg Mercury
8/28/23	68	1,329.50	Type 3	>10mg/kg Mercury
8/28/23	172	3,605.67	Type 3	<10 mg/kg Mercury
8/29/23	4	79.32	Type 3	>10 mg/kg Mercury
8/29/23	262	5,312.72	Type 3	<10 mg/kg Mercury
8/29/23	13	266.24	Type 2	<2.7 mg/kg Mercury
8/30/23	81	1,562.22	Type 3	>10 mg/kg Mercury
8/30/23	34	645.46	Type 3	<10 mg/kg Mercury
8/30/23	166	3,365.24	Type 2	<2.7 mg/kg Mercury
8/31/23	72	1,336.53	Type 3	>10 mg/kg Mercury
8/31/23	215	4,682.09	Type 3	<10 mg/kg Mercury
9/1/23	60	1,108.67	Type 3	>10 mg/kg Mercury
9/1/23	127	2,641.88	Type 3	<10 mg/kg Mercury
9/1/23	97	2,211.42	Type 2	<2.7 mg/kg Mercury
9/5/23	100	1,929.65	Type 3	>10 mg/kg Mercury
9/5/23	19	388.53	Type 3	<10 mg/kg Mercury
9/6/23	99	1,909.82	Type 3	>10 mg/kg Mercury
9/7/23	62	1,143.60	Type 3	>10 mg/kg Mercury
9/7/23	42	820.35	Type 3	<10 mg/kg Mercury
9/8/23	44	784.19	Type 3	>10 mg/kg Mercury
9/8/23	57	981.31	Type 3	<10 mg/kg Mercury

9/11/23	86	1,535.64	Type 3	>10 mg/kg Mercury
9/11/23	28	527.09	Type 3	<10 mg/kg Mercury
9/12/23	58	1,054.96	Type 3	>10 mg/kg Mercury
9/12/23	29	455.94	Type 3	<10 mg/kg Mercury
9/13/23	49	945.27	Type 3	>10 mg/kg Mercury
9/13/23	51	913.44	Type 3	<10 mg/kg Mercury
9/14/23	113	2,428.35	Type 3	<10 mg/kg Mercury
9/14/23	55	1,117.39	Type 2	<2.7 mg/kg Mercury
		<b>Total Tons to Date = 73,081.75</b>		

The areas that have been windrowed and/or excavated as of Friday, September 15<sup>th</sup>, 2023, are as follows:

- Greens: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 11<sup>th</sup>, , 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Fairways: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Tee Boxes: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 12<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, 18<sup>th</sup>
- Hot Spots: 8<sup>th</sup> hole rough, 6<sup>th</sup> hole rough, 5<sup>th</sup> hole rough, 4<sup>th</sup> hole rough, 5<sup>th</sup> fairway hotspot, 12<sup>th</sup> fairway hotspot, 15<sup>th</sup> fairway hotspot

Based upon the work to date, the remedial excavation work is approximately 90% complete as of September 15, 2023.

See Attachment 1, Photographic Log for recent photos. The excavation progress to date is shown on Figure 1 in Attachment 2.

#### **Confirmation Soil Samples**

In order to confirm that the impacted soils have been removed completely, a rigorous confirmation soil sampling plan is being implemented.

Confirmation soil samples have been collected for laboratory analysis from the areas that have been windrowed. Figure 1 shows the areas that have been sampled, the areas we have received data for, and the areas where we have data pending as of September 15<sup>th</sup>, 2023. The confirmation soil sample results received to date have shown that, for the most part, the excavations have successfully removed all the soils with impacts. However, there have been some confirmation samples where the soils still had mercury at concentrations above the applicable standards. Those areas will be further excavated and then resampled to confirm that all the remaining impacted soils have been removed.

Figure 1 shows the areas which require additional excavation. Confirmation soil sample results are included as Attachment 3, Soil Analytical Table.

#### **Particulate and Air Monitoring Results**

As part of the response actions, Braun Intertec is performing particulate monitoring across the Site to monitor for airborne dust. The particulate dust monitoring consists of multiple stationary dust meters as well as one portable dust monitor.

In addition to the dust meters, there is a weather monitoring station on the site which is used to monitor wind speed, direction, and temperature. This data is then used to adjust the stationary particulate meters to ensure that they are placed in locations that effectively monitor generated dust. As part of the response action plan, dust control measures (primarily the wetting of soils) are implemented during excavation.

The stationary dust monitors provide real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust monitors send out automated text and e-mail alerts if the dust monitoring thresholds established for the Site are exceeded. The notification threshold is currently set at 0.1 milligrams per meter cubed ( $\text{mg}/\text{m}^3$ ), which is well below the site-specific action level (SSAL) of  $0.621 \text{ mg}/\text{m}^3$ .

In general, one stationary dust meter is set in the upwind direction from the planned site work each morning, one or two dust meters are set immediately downwind of the active excavation areas, and two or three dust meters are set in a fan pattern downwind of the excavation areas. Beginning August 23, 2023, and moving forward, the dust meters were placed in similar positions each day. Station A is typically placed upwind from active excavation areas, Stations B and C are placed immediately downwind of excavation areas, and Stations D and E were set further downwind of excavation nearer to the Site perimeter. The Braun Intertec field staff professional near the work area also have a portable dust meter on them. Braun Intertec also monitors the readings from a stationary dust meter located approximately 2 miles from the site that is part of a regional air quality study to monitor regional air quality to see if that affects our particulate measurements.

One or two dust monitors were left operating at the site overnight and over the weekend when the Site was not active to ensure dust levels remained below the SSAL.

While exceedances in dust levels did occur, they were short in duration, lasting no longer than a few minutes. The exceedances were observed to be a result of disturbances, typically caused by trucks and construction equipment driving along clean soils on the built haul roadways, dust control measures in the parking lot and on Larpenteur Ave (i.e., sweeping of dirt from paved surfaces), tree removal activities (i.e., cutting down trees and transporting them across the Site and mulching them), and concrete/asphalt crushing activities. There was no visible dust observed from windrows and stockpiles of mercury contaminated soil.

For the week of September 11<sup>th</sup> to September 15<sup>th</sup>, the summary of the dust monitoring results is below:

Particulate Station ID	Average Particulate Concentration ( $\text{mg}/\text{m}^3$ )	Maximum Concentration ( $\text{mg}/\text{m}^3$ )	Exceedances above SSAL ( $0.621 \text{ mg}/\text{m}^3$ )	Action Taken (if applicable)
A	0.022	3.55 (discrete occurrence at 10:57:29 on 09/11/2023)	Some exceedances from 10:55:14 to 10:57:29 on 09/11/2023 during tree stump grinding activities.	Additional dust control was implemented whenever above 0.2

B	0.059	8.91 (discrete occurrence at 13:01:04 on 09/13/2023)	Several readings through the week; placement directly adjacent to truck loading areas and active truck routes along haul roads in verified clean soil. Elevated readings at 13:00 on 09/13/2023 due to monitor running in back of truck during transport to another location.	Additional dust control was implemented whenever above 0.2
C	0.023	9.54 (discrete occurrence at 13:07:21 on 09/14/2023)	Several readings through the week. Elevated readings occurred during nearby tree removal activities.	Additional dust control was implemented whenever above 0.2
D	0.018	0.414	None	Additional dust control was implemented whenever above 0.2
E	0.063	5.69 (singular reading at 10:57:59 on 09/11/2023)	Several elevated readings on 09/11 and 09/14 during nearby tree removal activities and/or concrete and asphalt crushing activities.	Additional dust control was implemented whenever above 0.2

SSAL = Site Specific Action Level

In addition to monitoring for particulates via the onsite dust meters, Braun Intertec is collecting bulk air samples down wind of the excavation areas. The bulk air samples are collected from two locations using pumps and filter cartridges. The two locations are sampled bi-weekly for a total of four samples per week. The bulk air cartridges samples are then sent to Bureau Veritas laboratory for analysis of mercury. Bureau Veritas laboratory had their mercury instruments have a maintenance issue the week of 8/21 and analytical results were delayed while they worked to fix the issue. Based on communication with the laboratory, the instruments have been repaired and tested and they have resumed running samples as of September 18<sup>th</sup>, 2023.

The analytical results received for the air samples collected on 08/22/2023, 08/25/2023, 08/29/2023, 08/31/2023, 09/05/2023, and 09/07/2023 all came back non-detect <0.00012 mg/m<sup>3</sup> for mercury.

#### Upcoming Schedule

For the week of September 18, 2023, Braun Intertec anticipates another full week of primarily hauling contaminated soil to SKB landfill for disposal, complete demolition of Site structures, completion soil

excavation of fairways as approved by the MDA, creation of truck haul road on verified clean soils, complete tree removals, and related sampling activities.

**Notes**

Exceeds R-SRV

Minnesota Pollution Control Agency (MPCA) Residential/Recreational Soil Reference Values (R-SRVs) updated in March 2023.

mg/kg = Milligrams per kilogram.

< = Not detected at or above the laboratory reporting limit indicated.

--- = Not analyzed or calculated for this parameter or not applicable.

BTV = Background Threshold Value. BTVs are not calculated health based SRVs. The MPCA calculated SRVs were determined to be below background values (MPCA guidance document c-r1-05, April 2021).

[L1] = Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

[M0] = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

[M1] = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

[P6] = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

[R1] = RPD value was outside control limits.

## Mercury Air Sample Analytical Results

**TECHNICAL MEMORANDUM**

**SUBJECT**        **Weekly Environmental Response Action Update**

**SITE**            **The Heights Development, 2200 Larpenteur Avenue East, Saint Paul, Minnesota**

**DATE:**          **9/18/2023 to 9/22/2023**

**FROM:**          **Kenneth Larsen, PE, PG, Vice President, Principal Engineer - Braun Intertec**  
                     **Mark Keefer, PG, Principal Scientist - Braun Intertec**

Braun Intertec Corporation has prepared this Weekly Environmental Response Action Update for The Heights Development project on behalf of the Saint Paul Port Authority. The weekly update provides a summary of the environmental response actions that were completed at the Site between the listed period including identification of contaminated soil excavation locations, post excavation soil sample locations/results, related air/dust monitoring results, and a summary of the quantity of contaminated soil disposed of at the landfill for the given week and to date. A summary of anticipated environmental response actions for the following week is also provided.

The information and data included in the weekly update was collected by Braun Intertec in accordance with the following documents:

- Revised Response Action Plan, Hillcrest Redevelopment Site Saint Paul, Minnesota MPCA Brownfields Site ID: BF0001281 MDA Project No.: JAL101091523, Dated September 1, 2022.
- Dust Monitoring Plan for Response Action Implementation, The Heights Development Former Hillcrest Golf Course Site, Saint Paul, Minnesota MPCA Brownfields Site ID: BR1281 MDA Project No.: JAL101091523, dated March 31, 2023.

**General Construction Update 9/18/2023 to 9/22/2023**

Soil excavation work began on Monday August 7<sup>th</sup>, 2023.

Transportation of mercury impacted soil continued the week of Monday, September 18, 2023, with Type 3 soils where mercury was detected with concentrations below 10 mg/kg, and Type 2 soils with mercury below 2.7 mg/kg. Side dump trucks were used to transport these soils from the fairways. All trucks were covered prior to leaving the site.

On Tuesday September 19<sup>th</sup>, a pickup truck was driving in the central portion of the site, when it hit a small piece of pipe (pipe was from the golf course irrigation system) that was sticking up from the ground. The pipe punctured the fuel tank (unleaded gasoline) on the pickup truck and the driver drove a short distance before they realized that the truck was leaking gas. The MDA and MPCA were notified of the incident and after approval from both entities, took next steps in accordance with the Response Action Plan. The soils were excavated and stockpiled on plastic poly and then covered with poly pending the lab results.

Other activities on site during the week of September 18<sup>th</sup> through 22<sup>nd</sup>, 2023 included the excavation and export of common soils for offsite reuse, windrowing verified clean topsoil on verified clean fairways using offroad trucks, continued building of haul roads on verified clean soils, placing mulch over the haul roads to help control dust and clean truck tires, and tree removal and mulching for cover of haul roads. On Friday hydro seed was placed in clean graded areas in preparation for winter conditions.

The following is a summary of the daily soil disposal.

Date	# of Truck Loads	Tons of Soil Disposed of at SKB Landfill	Soil Type	Notes
8/16/23	48	925.2	Type 3	>10 mg/kg Mercury
8/17/23	92	1,707.74	Type 3	>10 mg/kg Mercury
8/18/23	97	1,819.81	Type 3	>10 mg/kg Mercury
8/21/23	70	1,356.04	Type 3	<10 mg/kg Mercury
8/21/23	66	1,431.72	Type 2	<2.7 mg/kg Mercury
8/22/23	184	3,948.65	Type 3	<10 mg/kg Mercury
8/23/23	161	3,387.11	Type 3	<10 mg/kg Mercury

8/24/23	133	2,560.94	Type 2	<2.7 mg/kg Mercury
8/25/23	282	5,620.34	Type 3	<10 mg/kg Mercury
8/25/23	46	881.16	Type 2	<2.7 mg/kg Mercury
8/28/23	68	1,329.50	Type 3	>10mg/kg Mercury
8/28/23	172	3,605.67	Type 3	<10 mg/kg Mercury
8/29/23	4	79.32	Type 3	>10 mg/kg Mercury
8/29/23	262	5,312.72	Type 3	<10 mg/kg Mercury
8/29/23	13	266.24	Type 2	<2.7 mg/kg Mercury
8/30/23	81	1,562.22	Type 3	>10 mg/kg Mercury
8/30/23	34	645.46	Type 3	<10 mg/kg Mercury
8/30/23	166	3,365.24	Type 2	<2.7 mg/kg Mercury
8/31/23	72	1,336.53	Type 3	>10 mg/kg Mercury
8/31/23	215	4,682.09	Type 3	<10 mg/kg Mercury
9/1/23	60	1,108.67	Type 3	>10 mg/kg Mercury
9/1/23	127	2,641.88	Type 3	<10 mg/kg Mercury
9/1/23	97	2,211.42	Type 2	<2.7 mg/kg Mercury
9/5/23	100	1,929.65	Type 3	>10 mg/kg Mercury
9/5/23	19	388.53	Type 3	<10 mg/kg Mercury

9/6/23	99	1,909.82	Type 3	>10 mg/kg Mercury
9/7/23	62	1,143.60	Type 3	>10 mg/kg Mercury
9/7/23	42	820.35	Type 3	<10 mg/kg Mercury
9/8/23	44	784.19	Type 3	>10 mg/kg Mercury
9/8/23	57	981.31	Type 3	<10 mg/kg Mercury
9/11/23	86	1,535.64	Type 3	>10 mg/kg Mercury
9/11/23	28	527.09	Type 3	<10 mg/kg Mercury
9/12/23	58	1,054.96	Type 3	>10 mg/kg Mercury
9/12/23	29	455.94	Type 3	<10 mg/kg Mercury
9/13/23	49	945.27	Type 3	>10 mg/kg Mercury
9/13/23	51	913.44	Type 3	<10 mg/kg Mercury
9/14/23	113	2,428.35	Type 3	<10 mg/kg Mercury
9/14/23	55	1,117.39	Type 2	<2.7 mg/kg Mercury
9/18/23	208	3,981.20	Type 3	<10 mg/kg Mercury
9/19/23	213	4,194.56	Type 3	<10 mg/kg Mercury
9/20/23	199	3,861.20	Type 3	<10 mg/kg Mercury
9/21/23	113	2,275.07	Type 3	<10 mg/kg Mercury
9/21/23	74	1,478.31	Type 2	<2.7 mg/kg Mercury
9/22/23	93	1,957.73	Type 3	<10 mg/kg Mercury
		<b>Total Tons to Date = 90,829.82</b>		

The areas that have been windrowed and/or excavated as of Friday, September 22<sup>nd</sup>, 2023, are as follows:

- Greens: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Fairways: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Tee Boxes: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 12<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, 18<sup>th</sup>
- Hot Spots: 8<sup>th</sup> hole rough, 6<sup>th</sup> hole rough, 5<sup>th</sup> hole rough, 4<sup>th</sup> hole rough, 5<sup>th</sup> fairway hotspot, 12<sup>th</sup> fairway hotspot, 15<sup>th</sup> fairway hotspot

Based upon the work to date, the remedial excavation work is approximately 95% complete as of September 22<sup>nd</sup>, 2023.

See Attachment 1, Photographic Log for recent photos. The excavation progress to date is shown on Figure 1 in Attachment 2.

#### **Confirmation Soil Samples**

In order to confirm that the impacted soils have been removed completely, a rigorous confirmation soil sampling plan is being implemented.

Confirmation soil samples have been collected for laboratory analysis from the areas that have been windrowed. Figure 1 shows the areas that have been sampled, the areas we have received data for, and

the areas where we have data pending as of September 22<sup>nd</sup>, 2023. The confirmation soil sample results received to date have shown that, for the most part, the excavations have successfully removed all the soils with impacts. However, there have been some confirmation samples where the soils still had mercury at concentrations above the applicable standards. Those areas will be further excavated and then resampled to confirm that all the remaining impacted soils have been removed.

Figure 1 shows the areas which require additional excavation. Confirmation soil sample results are included as Attachment 3, Soil Analytical Table.

### **Particulate and Air Monitoring Results**

As part of the response actions, Braun Intertec is performing particulate monitoring across the Site to monitor for airborne dust. The particulate dust monitoring consists of multiple stationary dust meters as well as one portable dust monitor.

In addition to the dust meters, there is a weather monitoring station on the site which is used to monitor wind speed, direction, and temperature. This data is then used to adjust the stationary particulate meters to ensure that they are placed in locations that effectively monitor generated dust. As part of the response action plan, dust control measures (primarily the wetting of soils) are implemented during excavation.

The stationary dust monitors provide real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust monitors send out automated text and e-mail alerts if the dust monitoring thresholds established for the Site are exceeded. The notification threshold is currently set at 0.1 milligrams per meter cubed ( $\text{mg}/\text{m}^3$ ), which is well below the site-specific action level (SSAL) of 0.621  $\text{mg}/\text{m}^3$ .

In general, one stationary dust meter is set in the upwind direction from the planned site work each morning, one or two dust meters are set immediately downwind of the active excavation areas, and two or three dust meters are set in a fan pattern downwind of the excavation areas. Beginning August 23, 2023, and moving forward, the dust meters were placed in similar positions each day. Station A is typically placed upwind from active excavation areas, Stations B and C are placed immediately downwind of excavation areas, and Stations D and E were set further downwind of excavation nearer to the Site perimeter. The Braun Intertec field staff professional near the work area also have a portable dust meter on them. Braun Intertec also monitors the readings from a stationary dust meter located approximately 2 miles from the site that is part of a regional air quality study to monitor regional air quality to see if that affects our particulate measurements.

One or two dust monitors were left operating at the site overnight and over the weekend when the Site was not active to ensure dust levels remained below the SSAL.

While exceedances in dust levels did occur, they were short in duration, lasting no longer than a few minutes. The exceedances were observed to be a result of disturbances, typically caused by trucks and construction equipment driving along clean soils on the built haul roadways, dust control measures in the parking lot and on Larpenteur Ave (i.e., sweeping of dirt from paved surfaces), tree removal activities (i.e., cutting down trees and transporting them across the Site and mulching them), and concrete/asphalt crushing activities. There was no visible dust observed from windrows and stockpiles of mercury contaminated soil.

For the week of September 18<sup>th</sup> to September 22<sup>nd</sup>, the summary of the dust monitoring results is below:

Particulate Station ID	Average Particulate Concentration (mg/m <sup>3</sup> )	Maximum Concentration (mg/m <sup>3</sup> )	Exceedances above SSAL (0.621 mg/m <sup>3</sup> )	Action Taken (if applicable)
A	0.028	2.96 (discrete occurrence at 7:13:45 on 9/22/2023)	1 discrete occurrence while starting and transporting the dust monitor at the beginning of the day.	None
B	0.102	8.16 (discrete occurrence at 14:16:30 on 09/22/2023)	Several readings through the week; placement directly adjacent to truck loading areas and active truck routes along haul roads in verified clean soil.	Additional dust control was implemented whenever above 0.2
C	0.024	2.53 (singular reading at 08:12:45 on 09/22/2023)	Several readings through the week. Elevated readings occurred during truck traffic and hauling of soils.	Additional dust control was implemented whenever above 0.2
D	0.036	6.97 (singular reading at 15:06:56 on 9/20/2023)	None besides the max concentration stated already.	Additional dust control was implemented whenever above 0.2
E	0.045	5.88 (singular reading at 14:43:59 on 09/21/2023)	Several elevated readings throughout the week being downwind and near the entrance and exit of the Site for traffic and concrete crushing activities.	Additional dust control was implemented whenever above 0.2

SSAL = Site Specific Action Level

In addition to monitoring for particulates via the onsite dust meters, Braun Intertec is collecting bulk air samples down wind of the excavation areas. The bulk air samples are collected from two locations using pumps and filter cartridges. The two locations are sampled bi-weekly for a total of four samples per week. The bulk air cartridges samples are then sent to Bureau Veritas laboratory for analysis of mercury.

The analytical results received for the air samples collected on 09/19/2023 and 09/21/2023 all came back non-detect <0.00011 mg/m<sup>3</sup> for mercury.

**Upcoming Schedule**

For the week of September 25, 2023, Braun Intertec anticipates another full week of primarily hauling contaminated soil to SKB landfill for disposal pending weather as the forecast is for rain, completion of soil excavation of fairways as approved by the MDA, creation of truck haul road on verified clean soils and related sampling activities.

Direction:	Facing east	
Subject:	Hydroseed applied to bare soil areas.	

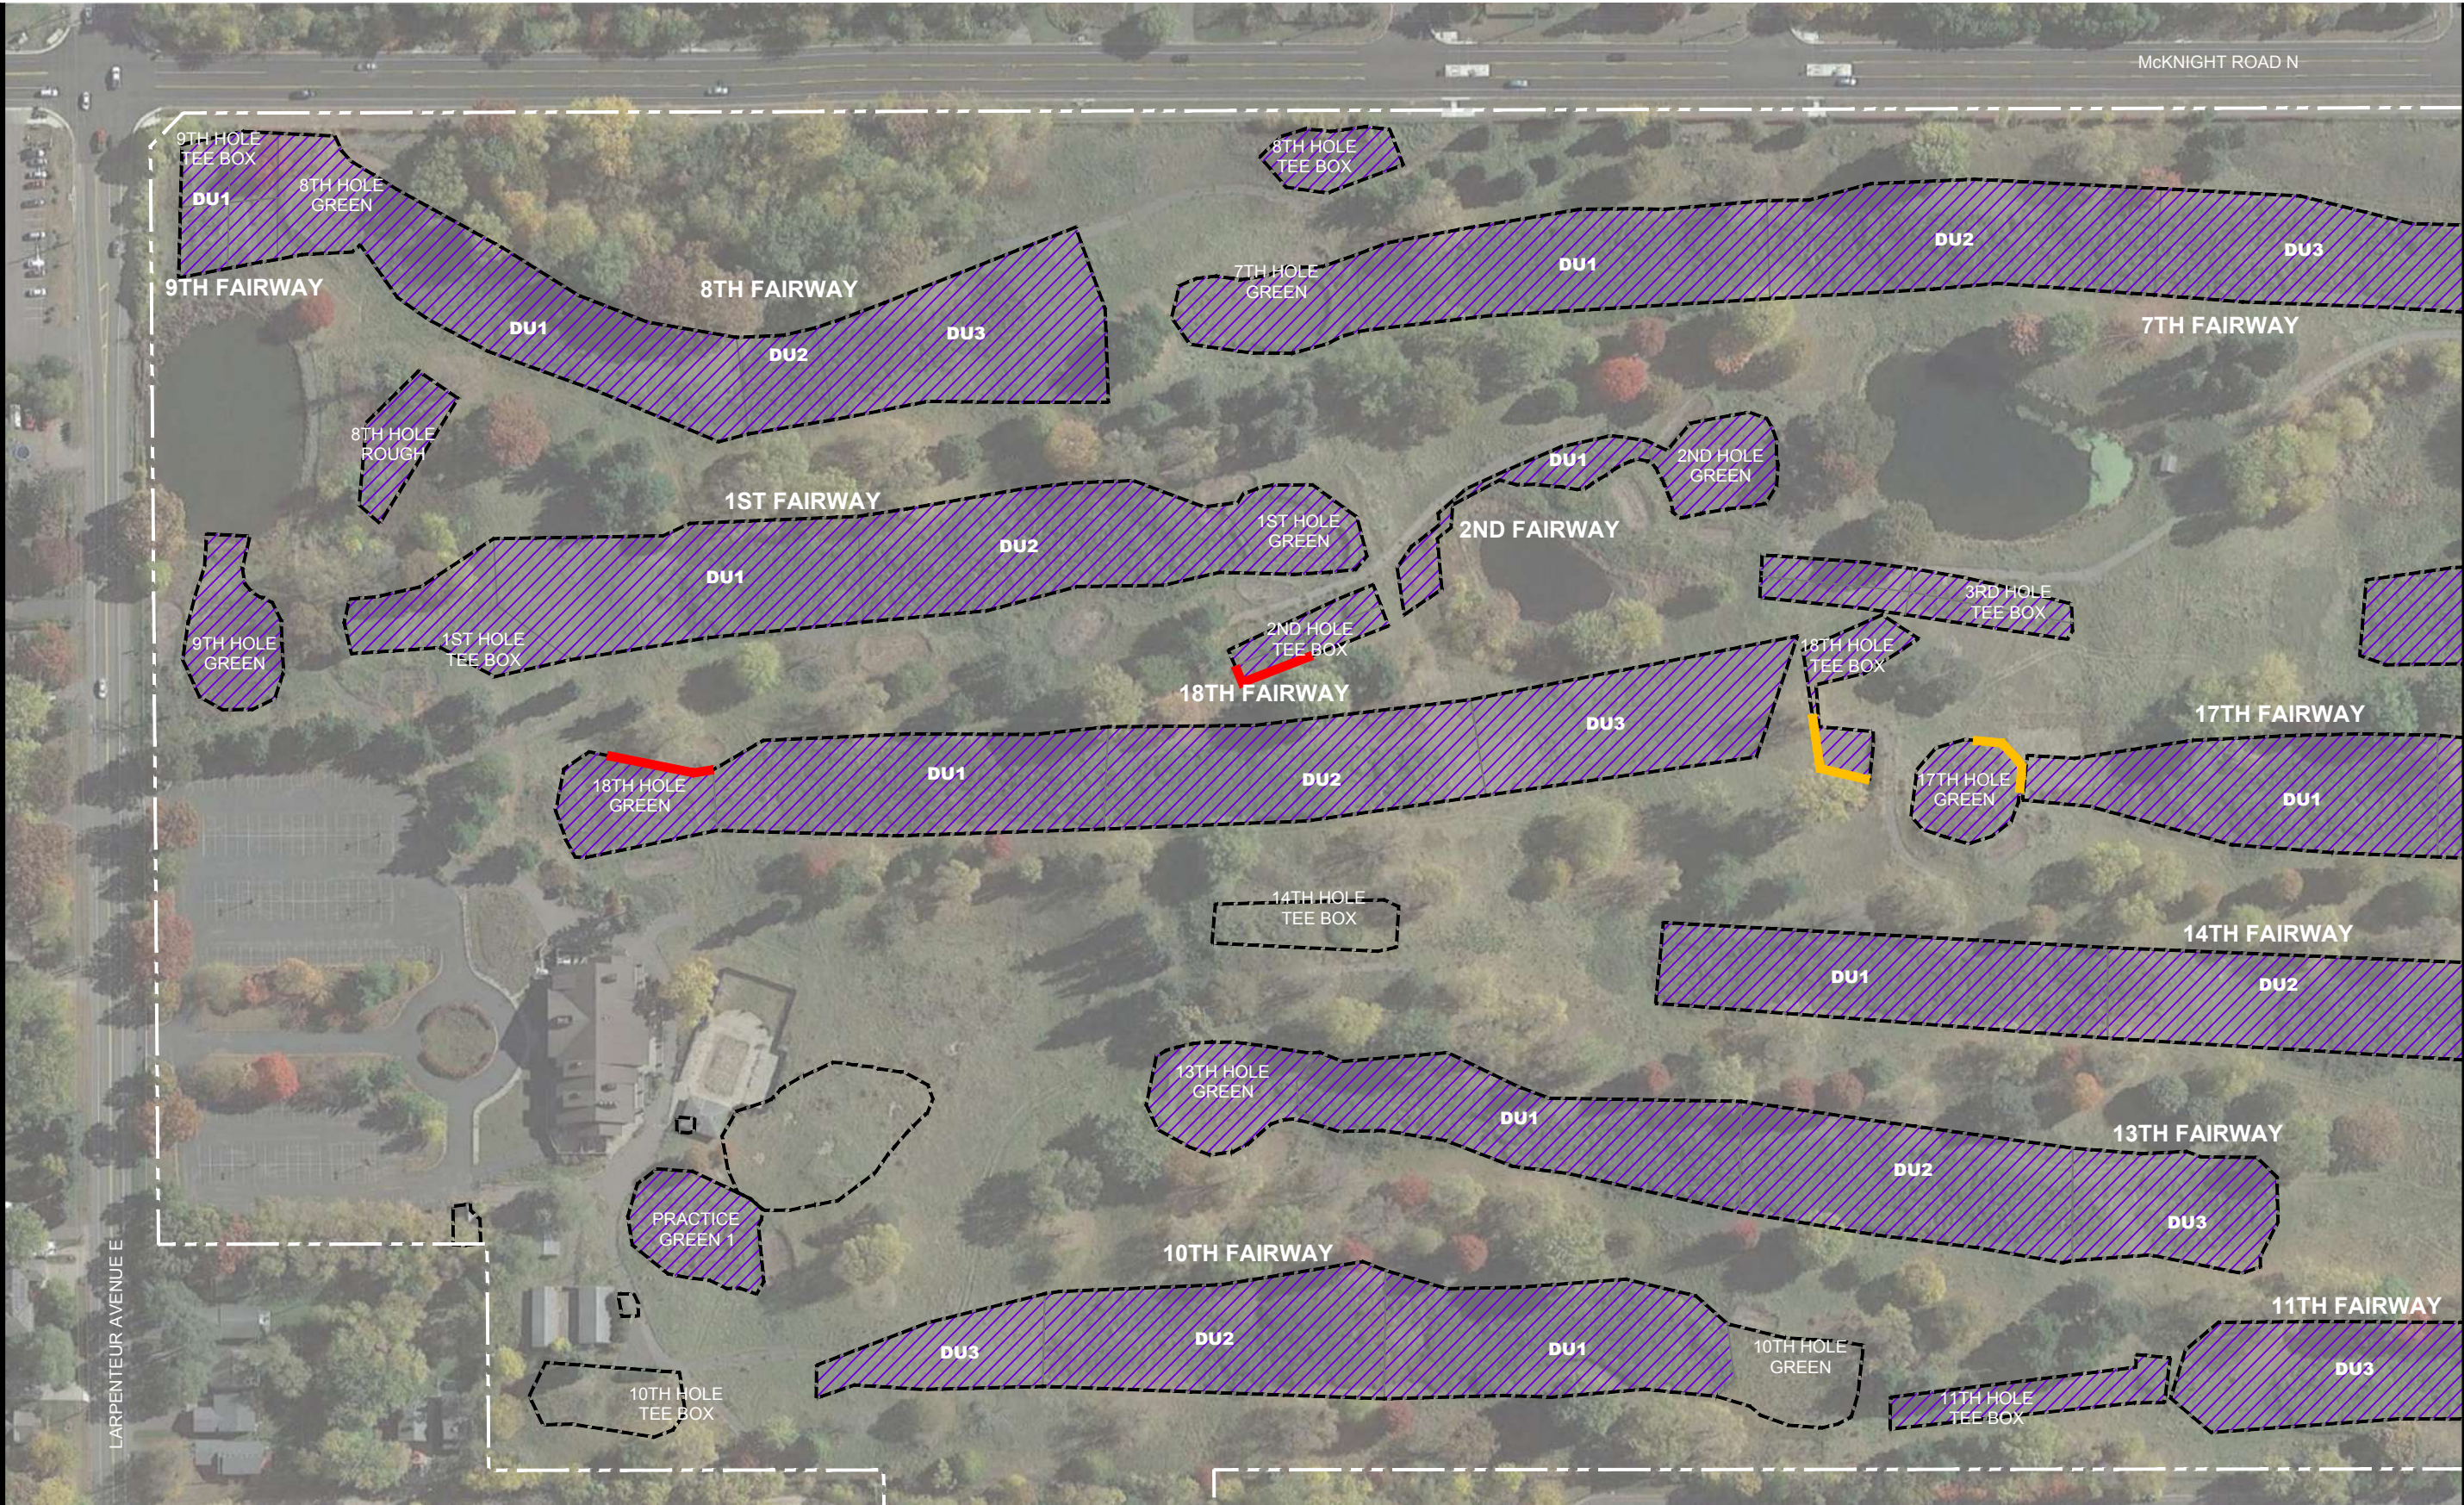

Date:	09/22/2023	<b>BRAUN</b> <b>INTERTEC</b>
Direction:	Facing north	
Subject:	Watering down of haul roads with water truck.	

## **Figure – Contaminated Soil Excavation Areas Update**

F:\2019\B1903316\CAD\B1903316\_02.dwg, 2023-09-22\_Exc-1, 9/25/2023 4:21:04 PM

- PLANNED EXTENT OF EXCAVATION
- EXCAVATION ACTIVITIES (AS OF 9/22/2023)
- /// CURRENT EXTENT OF EXCAVATION
  - EXCAVATION AREA, CONFIRMED BY LABORATORY ANALYTICAL DATA
  - EXCAVATION AREA, LABORATORY RESULTS PENDING
  - AREA REQUIRING ADDITIONAL EXCAVATION

**Notes**

Exceeds R-SRV

Minnesota Pollution Control Agency (MPCA) Residential/Recreational Soil Reference Values (R-SRVs) updated in March 2023.

mg/kg = Milligrams per kilogram.

< = Not detected at or above the laboratory reporting limit indicated.

--- = Not analyzed or calculated for this parameter or not applicable.

BTV = Background Threshold Value. BTVs are not calculated health based SRVs. The MPCA calculated SRVs were determined to be below background values (MPCA guidance document c-r1-05, April 2021).

[L1] = Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

[M0] = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

[M1] = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

**Table 1**  
**Soil Analytical Results**  
**The Heights**  
**Saint Paul, Minnesota**  
**Project B1903316.02**

Location	Sample Identifier	Date Collected	Compound (mg/kg)	
			<b>Total Arsenic</b>	<b>Total Mercury</b>
			R-SRV: 9 <sup>BTv</sup>	R-SRV: 2.7

[P6] = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

[R1] = RPD value was outside control limits.

### GENERAL COMMENTS

Unless otherwise noted below the following statements apply: 1) all samples were received in acceptable condition, 2) all quality control results associated with this sample set were within acceptable limits and /or do not adversely affect the reported results and 3) the industrial hygiene results have not been blank corrected.

The client provided their pertinent field sampling data on the analysis request paperwork submitted with the samples. Results apply to the sample as received.

**TECHNICAL MEMORANDUM**

**SUBJECT**        **Weekly Environmental Response Action Update**

**SITE**            **The Heights Development, 2200 Larpenteur Avenue East, Saint Paul, Minnesota**

**DATE:**         **9/25/2023 to 9/29/2023**

**FROM:**         **Kenneth Larsen, PE, PG, Vice President, Principal Engineer - Braun Intertec**  
                      **Mark Keefer, PG, Principal Scientist - Braun Intertec**

Braun Intertec Corporation has prepared this Weekly Environmental Response Action Update for The Heights Development project on behalf of the Saint Paul Port Authority. The weekly update provides a summary of the environmental response actions that were completed at the Site between the listed period including identification of contaminated soil excavation locations, post excavation soil sample locations/results, related air/dust monitoring results, and a summary of the quantity of contaminated soil disposed of at the landfill for the given week and to date. A summary of anticipated environmental response actions for the following week is also provided.

The information and data included in the weekly update was collected by Braun Intertec in accordance with the following documents:

- Revised Response Action Plan, Hillcrest Redevelopment Site Saint Paul, Minnesota MPCA Brownfields Site ID: BF0001281 MDA Project No.: JAL101091523, Dated September 1, 2022.
- Dust Monitoring Plan for Response Action Implementation, The Heights Development Former Hillcrest Golf Course Site, Saint Paul, Minnesota MPCA Brownfields Site ID: BR1281 MDA Project No.: JAL101091523, dated March 31, 2023.

**General Construction Update 9/25/2023 to 9/29/2023**

Soil excavation work began on Monday August 7<sup>th</sup>, 2023.

Transportation of mercury impacted soil did not take place during the week of Monday, September 25<sup>th</sup>, 2023, due to heavy rains on site. Activities that occurred during the week included maintenance of haul roads and the excavation and export of verified clean soils by Bolander for offsite reuse. Sampling was done of the exported common soils prior to removal and the results received have been below regulatory limits (MPCA off-site reuse guidance and the approved RAP).

On Tuesday September 19<sup>th</sup>, a pickup truck was driving in the central portion of the site, when it hit a small piece of pipe (pipe was from the golf course irrigation system) that was sticking up from the ground. The pipe punctured the fuel tank (unleaded gasoline) on the pickup truck and the driver drove a short distance before they realized that the truck was leaking gas. The MDA and MPCA were notified of the incident and after approval from both entities, took next steps in accordance with the Response Action Plan. The soils were excavated and stockpiled on plastic poly and then covered with poly. Lab

results have come back as non-detect for petroleum compounds and the soil is planned to be hauled to SKB landfill from disposal the week of October 2<sup>nd</sup>, 2023. See Attachment 1 for analytical results.

The following is a summary of the daily soil disposal.

Date	# of Truck Loads	Tons of Soil Disposed of at SKB Landfill	Soil Type	Notes
8/16/23	48	925.2	Type 3	>10 mg/kg Mercury
8/17/23	92	1,707.74	Type 3	>10 mg/kg Mercury
8/18/23	97	1,819.81	Type 3	>10 mg/kg Mercury
8/21/23	70	1,356.04	Type 3	<10 mg/kg Mercury
8/21/23	66	1,431.72	Type 2	<2.7 mg/kg Mercury
8/22/23	184	3,948.65	Type 3	<10 mg/kg Mercury
8/23/23	161	3,387.11	Type 3	<10 mg/kg Mercury
8/23/23	40	821.70	Type 2	<2.7 mg/kg Mercury
8/24/23	41	814.37	Type 3	>10 mg/kg Mercury
8/24/23	138	2,724.48	Type 3	<10 mg/kg Mercury
8/24/23	133	2,560.94	Type 2	<2.7 mg/kg Mercury
8/25/23	282	5,620.34	Type 3	<10 mg/kg Mercury
8/25/23	46	881.16	Type 2	<2.7 mg/kg Mercury
8/28/23	68	1,329.50	Type 3	>10mg/kg Mercury
8/28/23	172	3,605.67	Type 3	<10 mg/kg Mercury
8/29/23	4	79.32	Type 3	>10 mg/kg Mercury
8/29/23	262	5,312.72	Type 3	<10 mg/kg Mercury
8/29/23	13	266.24	Type 2	<2.7 mg/kg Mercury
8/30/23	81	1,562.22	Type 3	>10 mg/kg Mercury
8/30/23	34	645.46	Type 3	<10 mg/kg Mercury
8/30/23	166	3,365.24	Type 2	<2.7 mg/kg Mercury
8/31/23	72	1,336.53	Type 3	>10 mg/kg Mercury

9/20/23	199	3,861.20	Type 3	<10 mg/kg Mercury
9/21/23	113	2,275.07	Type 3	<10 mg/kg Mercury
9/21/23	74	1,478.31	Type 2	<2.7 mg/kg Mercury
9/22/23	93	1,957.73	Type 3	<10 mg/kg Mercury
		<b>Total Tons to Date = 90,829.82</b>		

The areas that have been windrowed and/or excavated as of Friday, September 29<sup>th</sup>, 2023, are as follows:

- Greens: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Fairways: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Tee Boxes: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 12<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, 18<sup>th</sup>
- Hot Spots: 8<sup>th</sup> hole rough, 6<sup>th</sup> hole rough, 5<sup>th</sup> hole rough, 4<sup>th</sup> hole rough, 5<sup>th</sup> fairway hotspot, 12<sup>th</sup> fairway hotspot, 15<sup>th</sup> fairway hotspot

Based upon the work to date, the remedial excavation work is approximately 95% complete as of September 29<sup>th</sup>, 2023.

See Attachment 2, Photographic Log for recent photos. The excavation progress to date is shown on Figure 1 in Attachment 3.

#### **Confirmation Soil Samples**

In order to confirm that the impacted soils have been removed completely, a rigorous confirmation soil sampling plan is being implemented.

Confirmation soil samples have been collected for laboratory analysis from the areas that have been windrowed. Figure 1 shows the areas that have been sampled, the areas we have received data for, and the areas where we have data pending as of September 29<sup>th</sup>, 2023. The confirmation soil sample results received to date have shown that, for the most part, the excavations have successfully removed all the soil with impacts. However, there have been some confirmation samples where the soils still had

mercury at concentrations above the applicable standards. Those areas will be further excavated and then resampled to confirm that all the remaining impacted soils have been removed.

Figure 1 shows the areas which require additional excavation. Confirmation soil sample results are included as Attachment 4, Soil Analytical Table.

A confirmation soil sample of the 18<sup>th</sup> Tee box mistakenly was collected on September 20<sup>th</sup> prior to the soil being removed. Another confirmation soil sample was collected on September 21<sup>st</sup> after the sidewalk was extended and came back below regulatory requirements.

#### **Particulate and Air Monitoring Results**

As part of the response actions, Braun Intertec is performing particulate monitoring across the Site to monitor for airborne dust. The particulate dust monitoring consists of multiple stationary dust meters as well as one portable dust monitor.

In addition to the dust meters, there is a weather monitoring station on the site which is used to monitor wind speed, direction, and temperature. This data is then used to adjust the stationary particulate meters to ensure that they are placed in locations that effectively monitor generated dust. As part of the response action plan, dust control measures (primarily the wetting of soils) are implemented during excavation.

The stationary dust monitors provide real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust monitors send out automated text and e-mail alerts if the dust monitoring thresholds established for the Site are exceeded. The notification threshold is currently set at 0.1 milligrams per meter cubed ( $\text{mg}/\text{m}^3$ ), which is well below the site-specific action level (SSAL) of  $0.621 \text{ mg}/\text{m}^3$ .

Due to no hauling of contaminated soils, one dust monitor was left operating at the site throughout the week of September 25<sup>th</sup> through 29<sup>th</sup>, including overnight and over the weekend when the Site was not active to ensure dust levels remained below the SSAL.

While exceedances in dust levels did occur, they were short in duration, lasting no longer than a few minutes. The exceedances were observed to be a result of disturbances, typically caused by trucks and construction equipment driving along clean soils on the built haul roadways, dust control measures in the parking lot and on Larpenteur Ave (i.e., sweeping of dirt from paved surfaces), tree removal activities (i.e., cutting down trees and transporting them across the Site and mulching them), and concrete/asphalt crushing activities. There was no visible dust observed from windrows and stockpiles of mercury contaminated soil.

For the week of September 25<sup>th</sup> to September 29<sup>th</sup>, the summary of the dust monitoring results is below:

Particulate Station ID	Average Particulate Concentration (mg/m <sup>3</sup> )	Maximum Concentration (mg/m <sup>3</sup> )	Exceedances above SSAL (0.621 mg/m <sup>3</sup> )	Action Taken (if applicable)
A	NA	NA	None	None
B	NA	NA	None	None
C	NA	NA	None	None
D	NA	NA	None	None
E	0.036	0.21 (singular reading at 06:13:39 on 10/01/2023)	None	Additional dust control was implemented whenever above 0.2

SSAL = Site Specific Action Level

In addition to monitoring for particulates via the onsite dust meters, Braun Intertec is collecting bulk air samples down wind of the excavation areas. However, due to no contaminated soils being disturbed during the week of September 25<sup>th</sup> through 29<sup>th</sup>, and the heavy rains all week, particulate air sampling for mercury was not conducted.

#### **Upcoming Schedule**

For the week of October 2<sup>nd</sup>, 2023, Braun Intertec anticipates a full week of primarily hauling contaminated soil to SKB landfill for disposal, completion of soil excavation of fairways as approved by the MDA, creation of truck haul road on verified clean soils, export of clean soil for offsite use, related sampling activities, and removal of petroleum contaminated soil, pending weather.

**Notes**

Exceeds R-SRV

Minnesota Pollution Control Agency (MPCA) Residential/Recreational Soil Reference Values (R-SRVs) updated in March 2023.

mg/kg = Milligrams per kilogram.

< = Not detected at or above the laboratory reporting limit indicated.

--- = Not analyzed or calculated for this parameter or not applicable.

BTV = Background Threshold Value. BTVs are not calculated health based SRVs. The MPCA calculated SRVs were determined to be below background values (MPCA guidance document c-r1-05, April 2021).

[L1] = Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

[M0] = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

[M1] = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

**Table 1**

**Saint Paul, Minnesota**  
**Project B1903316.02**

Location	Sample Identifier	Date Collected	Compound (mg/kg)	
			<b>Total Arsenic</b>	<b>Total Mercury</b>
			R-SRV: 9 <sup>BTv</sup>	R-SRV: 2.7

[P6] = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

[R1] = RPD value was outside control limits.

**TECHNICAL MEMORANDUM**

**SUBJECT**        **Weekly Environmental Response Action Update**

**SITE**            **The Heights Development, 2200 Larpenteur Avenue East, Saint Paul, Minnesota**

**DATE:**          **9/4/2023 to 9/8/2023**

**FROM:**          **Kenneth Larsen, PE, PG, Vice President, Principal Engineer - Braun Intertec**  
                     **Mark Keefer, PG, Principal Scientist - Braun Intertec**

Braun Intertec Corporation has prepared this Weekly Environmental Response Action Update for The Heights Development project on behalf of the Saint Paul Port Authority. The weekly update provides a summary of the environmental response actions that were completed at the Site between the listed period including identification of contaminated soil excavation locations, post excavation soil sample locations/results, related air/dust monitoring results, and a summary of the quantity of contaminated soil disposed of at the landfill for the given week and to date. A summary of anticipated environmental response actions for the following week is also provided.

The information and data included in the weekly update was collected by Braun Intertec in accordance with the following documents:

- Revised Response Action Plan, Hillcrest Redevelopment Site Saint Paul, Minnesota MPCA Brownfields Site ID: BF0001281 MDA Project No.: JAL101091523, Dated September 1, 2022.
- Dust Monitoring Plan for Response Action Implementation, The Heights Development Former Hillcrest Golf Course Site, Saint Paul, Minnesota MPCA Brownfields Site ID: BR1281 MDA Project No.: JAL101091523, dated March 31, 2023.

**General Construction Update 9/4/2023 to 9/8/2023**

Soil excavation work began on Monday August 7<sup>th</sup>, 2023.

Transportation of mercury impacted soil continued after Labor Day on the week of Tuesday, September 5, 2023, with Type 3 soils where mercury was detected at concentrations above 10 mg/kg and Type 3 soils with mercury concentrations below 10 mg/kg. Side dump trucks and end dump trucks were used to transport these soils from greens, fairways, and tee boxes. Soils with mercury concentrations exceeding 10 mg/kg were transported in end dump trucks lined with poly sheeting. All trucks were covered prior to leaving the site.

Other activities on site during the week of September 4<sup>th</sup> through 8<sup>th</sup>, 2023 included the continued demolition of maintenance buildings on the east side of the site, continued removal of clubhouse building debris, removal of the former golf course paved cart paths, building of haul roads on verified clean soils, placing mulch over the haul roads to help control dust and clean truck tires, and tree removal and mulching for cover of haul roads.

The following is a summary of the daily soil disposal.

Date	# of Truck Loads	Tons of Soil Disposed of at SKB Landfill	Soil Type	Notes
8/16/23	48	925.2	Type 3	>10 mg/kg Mercury
8/17/23	92	1,707.74	Type 3	>10 mg/kg Mercury
8/18/23	97	1,819.81	Type 3	>10 mg/kg Mercury
8/21/23	70	1,356.04	Type 3	<10 mg/kg Mercury
8/21/23	66	1,431.72	Type 2	<2.7 mg/kg Mercury
8/22/23	184	3,948.65	Type 3	<10 mg/kg Mercury
8/23/23	161	3,387.11	Type 3	<10 mg/kg Mercury
8/23/23	40	821.70	Type 2	<2.7 mg/kg Mercury
8/24/23	41	814.37	Type 3	>10 mg/kg Mercury
8/24/23	138	2,724.48	Type 3	<10 mg/kg Mercury
8/24/23	133	2,560.94	Type 2	<2.7 mg/kg Mercury
8/25/23	282	5,620.34	Type 3	<10 mg/kg Mercury
8/25/23	46	881.16	Type 2	<2.7 mg/kg Mercury
8/28/23	68	1,329.50	Type 3	>10mg/kg Mercury
8/28/23	172	3,605.67	Type 3	<10 mg/kg Mercury
8/29/23	4	79.32	Type 3	>10 mg/kg Mercury
8/29/23	262	5,312.72	Type 3	<10 mg/kg Mercury
8/29/23	13	266.24	Type 2	<2.7 mg/kg Mercury
8/30/23	81	1,562.22	Type 3	>10 mg/kg Mercury
8/30/23	34	645.46	Type 3	<10 mg/kg Mercury
8/30/23	166	3,365.24	Type 2	<2.7 mg/kg Mercury
8/31/23	72	1,336.53	Type 3	>10 mg/kg Mercury
8/31/23	215	4,682.09	Type 3	<10 mg/kg Mercury
9/1/23	60	1,108.67	Type 3	>10 mg/kg Mercury
9/1/23	127	2,641.88	Type 3	<10 mg/kg Mercury
9/1/23	97	2,211.42	Type 2	<2.7 mg/kg Mercury
9/5/23	100	1,929.65	Type 3	>10 mg/kg Mercury
9/5/23	19	388.53	Type 3	<10 mg/kg Mercury
9/6/23	99	1,909.82	Type 3	>10 mg/kg Mercury
9/7/23	62	1,143.60	Type 3	>10 mg/kg Mercury
9/7/23	42	820.35	Type 3	<10 mg/kg Mercury
9/8/23	44	784.19	Type 3	>10 mg/kg Mercury
9/8/23	57	981.31	Type 3	<10 mg/kg Mercury
		<b>Total Tons to Date = 64,103.67</b>		

The areas that have been windrowed and/or excavated as of Friday, September 8<sup>th</sup>, 2023, are as follows:

- Greens: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 11<sup>th</sup>, 13<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Fairways: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Tee Boxes: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 12<sup>th</sup>, 17<sup>th</sup>, 18<sup>th</sup>
- Hot Spots: 8<sup>th</sup> hole rough, 6<sup>th</sup> hole rough, 5<sup>th</sup> hole rough, 4<sup>th</sup> Hole rough

Based upon the work to date, the remedial excavation work is approximately 80% complete as of September 8, 2023.

See Attachment 1, Photographic Log for recent photos. The excavation progress to date is shown on Figure 1 in Attachment 2.

#### **Confirmation Soil Samples**

In order to confirm that the impacted soils have been removed completely, a rigorous confirmation soil sampling plan is being implemented.

Confirmation soil samples have been collected for laboratory analysis from the areas that have been windrowed. Figure 1 shows the areas that have been sampled, the areas we have received data for, and the areas where we have data pending as of September 8<sup>th</sup>, 2023. The confirmation soil sample results received to date have shown that, for the most part, the excavations have successfully removed all the soils with impacts. However, there have been some confirmation samples where the soils still had mercury at concentrations above the applicable standards. Those areas will be further excavated and then resampled to confirm that all the remaining impacted soils have been removed.

Since the area of the practice greens is planned to be graded during development, Braun Intertec collected additional soil samples for laboratory analysis from both practice screens to confirm the initial results. A four-point composite was collected from the upper 6 inches in both Practice Green 1 and Practice Green 2 on August 31, 2023. The analytical results for mercury in the soil sample from Practice Green 1 was detected at 46.3 milligrams per kilogram (mg/kg) and the analytic results for the soil sample from Practice Green 2 were non-detected for mercury (<0.019 mg/kg).

Based on these results a request has made to the Minnesota Department of Agriculture to address the mercury impacts in practice green one as a contingency item to the approved RAP.

Figure 1 shows the areas which require additional excavation. Confirmation soil sample results are included as Attachment 3, Soil Analytical Table.

#### **Particulate and Air Monitoring Results**

As part of the response actions, Braun Intertec is performing particulate monitoring across the Site to monitor for airborne dust. The particulate dust monitoring consists of multiple stationary dust meters as well as one portable dust monitor.

In addition to the dust meters, there is a weather monitoring station on the site which is used to monitor wind speed, direction, and temperature. This data is then used to adjust the stationary particulate meters to ensure that they are placed in locations that effectively monitor generated dust. As part of the

response action plan, dust control measures (primarily the wetting of soils) are implemented during excavation.

The stationary dust monitors provide real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust monitors send out automated text and e-mail alerts if the dust monitoring thresholds established for the Site are exceeded. The notification threshold is currently set at 0.1 milligrams per meter cubed ( $\text{mg}/\text{m}^3$ ), which is well below the site-specific action level (SSAL) of  $0.621 \text{ mg}/\text{m}^3$ .

In general, one stationary dust meter is set in the upwind direction from the planned site work each morning, one or two dust meters are set immediately downwind of the active excavation areas, and two or three dust meters are set in a fan pattern downwind of the excavation areas. Beginning August 23, 2023, and moving forward, the dust meters were placed in similar positions each day. Station A is typically placed upwind from active excavation areas, Stations B and C are placed immediately downwind of excavation areas, and Stations D and E were set further downwind of excavation nearer to the Site perimeter. The Braun Intertec field staff professional near the work area also have a portable dust meter on them. Braun Intertec also monitors the readings from a stationary dust meter located approximately 2 miles from the site that is part of a regional air quality study to monitor regional air quality to see if that affects our particulate measurements.

One or two dust monitors were left operating at the site overnight and over the weekend when the Site was not active to ensure dust levels remained below the SSAL.

While exceedances in dust levels did occur, they were short in duration, lasting no longer than a few minutes. The exceedances were observed to be a result of disturbances, typically caused by trucks and construction equipment driving along clean soils on the built haul roadways and dust control measures in the parking lot and on Larpenteur Ave (i.e., sweeping of dirt from paved surfaces). There was no visible dust observed from windrows and stockpiles of mercury contaminated soil.

For the week of August 27<sup>th</sup> to September 2, the summary of the dust monitoring results is below:

Particulate Station ID	Average Particulate Concentration ( $\text{mg}/\text{m}^3$ )	Maximum Concentration ( $\text{mg}/\text{m}^3$ )	Exceedances above SSAL ( $0.621 \text{ mg}/\text{m}^3$ )	Action Taken (if applicable)
A	0.016	0.404	None	Additional dust control was implemented whenever above 0.2
B	0.030	6.25 (discrete occurrence at 07:05:39 on 09/05/2023)	Several readings through the week; placement directly adjacent to active truck routes along haul roads in verified clean soil. Elevated readings occurred during wind gusts	Additional dust control was implemented whenever above 0.2

			and/or nearby tree removal activities.	
C	0.012	0.523	None	Additional dust control was implemented whenever above 0.2
D	0.021	2.13 (singular reading at 15:25:10 on 09/05/2023)	Several discrete readings on 09/05/2023. Elevated readings occurred during wind gusts and/or nearby tree removal activities.	Additional dust control was implemented whenever above 0.2
E	0.021	0.640 (singular reading at 11:00:19 on 09/07/2023)	One discrete reading at 11:00:19 on 09/07/2023.	Additional dust control was implemented whenever above 0.2

SSAL = Site Specific Action Level

In addition to monitoring for particulates via the onsite dust meters, Braun Intertec is collecting bulk air samples down wind of the excavation areas. The bulk air samples are collected from two locations using pumps and filter cartridges. The two locations are sampled bi-weekly for a total of four samples per week. The bulk air cartridges samples are then sent to Bureau Veritas laboratory for analysis of mercury. Bureau Veritas laboratory had their mercury instruments have a maintenance issue the week of 8/21 and analytical results are delayed while they work to fix the issue. Based on communication with the laboratory, they anticipate having the mercury instruments repaired by 9/14. At this time, we have not received the analytical data for the air samples collected the week of 8/21 to 8/25, the week of 08/28 to 09/01, or the week of 09/05 to 09/08. The analytical results received for samples analyzed prior to the machine breakdown were all non-detect ( $<0.10 \text{ mg/m}^3$ ). If the lab does not have their machines repaired and the ability to run all of our samples by September 15th we will look for alternate labs to perform the analysis.

### **Upcoming Schedule**

For the week of September 11, 2023, Braun Intertec anticipates another full week of primarily hauling contaminated soil to SKB landfill for disposal, continued demolition of Site structures, soil excavation of fairways as approved by the MDA, creation of truck haul road on verified clean soils, select tree removals, and related sampling activities.

[L1] = Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this  
[M0] = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control  
[M1] = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample  
[P6] = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration  
[R1] = RPD value was outside control limits.

**TECHNICAL MEMORANDUM**

**SUBJECT**        **Weekly Environmental Response Action Update**

**SITE**            **The Heights Development, 2200 Larpenteur Avenue East, Saint Paul, Minnesota**

**DATE:**          **10/02/2023 to 10/06/2023**

**FROM:**          **Kenneth Larsen, PE, PG, Vice President, Principal Engineer - Braun Intertec**  
                      **Mark Keefer, PG, Principal Scientist - Braun Intertec**

Braun Intertec Corporation has prepared this Weekly Environmental Response Action Update for The Heights Development project (Site) on behalf of the Saint Paul Port Authority. The weekly update provides a summary of the environmental response actions that were completed at the Site between the listed period including identification of contaminated soil excavation locations, post excavation soil sample locations/results, related air/dust monitoring results, and a summary of the quantity of contaminated soil disposed of at the landfill for the given week and to date. A summary of anticipated environmental response actions for the following week is also provided.

The information and data included in the weekly update was collected by Braun Intertec in accordance with the following documents:

- Revised Response Action Plan, Hillcrest Redevelopment Site Saint Paul, Minnesota MPCA Brownfields Site ID: BF0001281 MDA Project No.: JAL101091523, Dated September 1, 2022.
- Dust Monitoring Plan for Response Action Implementation, The Heights Development Former Hillcrest Golf Course Site, Saint Paul, Minnesota MPCA Brownfields Site ID: BR1281 MDA Project No.: JAL101091523, dated March 31, 2023.

**General Construction Update 10/02/2023 to 10/06/2023**

Soil excavation work began on Monday August 7<sup>th</sup>, 2023.

Transportation of mercury impacted soil did not take place Monday, October 2nd, and Wednesday, October 4, 2023, due to heavy rains on Site. Transportation of impacted soil took place on Tuesday, October 3rd, Thursday, October 5, and Friday, October 6, 2023, with Type 3 soils where mercury was detected at concentrations above 10 mg/kg and petroleum impacted soil. Side dump trucks and end dump trucks were used to transport these soils from the practice green, 13th green, and petroleum leak area. Soils with mercury concentrations exceeding 10 mg/kg were transported in end dump trucks lined with poly sheeting. All trucks were covered prior to leaving the Site.

On Tuesday September 19<sup>th</sup>, a pickup truck was driving in the central portion of the Site, when it hit a small piece of pipe (pipe was from the golf course irrigation system) that was sticking up from the ground. The pipe punctured the fuel tank (unleaded gasoline) on the pickup truck and the driver drove a short distance before they realized that the truck was leaking gas. The MDA and MPCA were notified of

the incident and after approval from both entities, took the next steps in accordance with the Response Action Plan. The soils were excavated and stockpiled on plastic poly and then covered with poly pending the lab results. The Lab results were received on October 2, 2023. The lab results confirmed that all petroleum impacted soils related to the tank leak were removed, and that the remaining soils were all non-detect for VOCs, GRO and DRO. Therefore, the stockpiled petroleum impacted soils were removed from the Site and transported to SKB landfill for disposal.

Other activities onsite during the week of October 2nd through 6<sup>th</sup>, 2023 included maintenance of haul roads, placing mulch in heavily saturated areas, dewatering standing ponds, SWPP correction actions, mass grading activities, and windrowing/stockpiling verified clean soils by Bolander for offsite reuse. Braun Intertec staff collected confirmation soil samples throughout the week. On Thursday and Friday, hydro seed was placed in clean graded areas in preparation for winter conditions.

The following is a summary of the daily soil disposal.

Date	# of Truck Loads	Tons of Soil Disposed of at SKB Landfill	Soil Type	Notes
8/16/23	48	925.2	Type 3	>10 mg/kg Mercury
8/17/23	92	1,707.74	Type 3	>10 mg/kg Mercury
8/18/23	97	1,819.81	Type 3	>10 mg/kg Mercury
8/21/23	70	1,356.04	Type 3	<10 mg/kg Mercury
8/21/23	66	1,431.72	Type 2	<2.7 mg/kg Mercury

<b>Total Tons to Date = 94,265.27</b>				

The areas that have been windrowed and/or excavated as of Friday, October 6<sup>th</sup>, 2023, are as follows:

- Greens: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, 18<sup>th</sup>, and Practice Green 1
- Fairways: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Tee Boxes: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, 18<sup>th</sup>
- Hot Spots: 8<sup>th</sup> hole rough, 6<sup>th</sup> hole rough, 5<sup>th</sup> hole rough, 4<sup>th</sup> hole rough, 5<sup>th</sup> fairway hotspot, 12<sup>th</sup> fairway hotspot, 15<sup>th</sup> fairway hotspot

Based upon the work to date, the remedial excavation work is approximately 97% complete as of October 6<sup>th</sup>, 2023.

See Attachment 1, Photographic Log for recent photos. The excavation progress to date is shown on Figure 1 in Attachment 2.

#### **Confirmation Soil Samples**

In order to confirm that the impacted soils have been removed completely, a rigorous confirmation soil sampling plan is being implemented.

Confirmation soil samples have been collected for laboratory analysis from the areas that have been windrowed. Figure 1 shows the areas that have been sampled, the areas we have received data for, and the areas where we have data pending as of October 6<sup>th</sup>, 2023. The confirmation soil sample results received to date have shown that, for the most part, the excavations have successfully removed all the soils with impacts. However, there have been some confirmation samples where the soils still had mercury at concentrations above the applicable standards. Those areas will be further excavated and then resampled to confirm that all the remaining impacted soils have been removed.

Figure 1 shows the areas which require additional excavation. Confirmation soil sample results are included as Attachment 3, Soil Analytical Table.

#### **Particulate and Air Monitoring Results**

As part of the response actions, Braun Intertec is performing particulate monitoring across the Site to monitor for airborne dust. The particulate dust monitoring consists of multiple stationary dust meters as well as one portable dust monitor.

In addition to the dust meters, there is a weather monitoring station on the Site which is used to monitor wind speed, direction, and temperature. This data is then used to adjust the stationary particulate meters to ensure that they are placed in locations that effectively monitor generated dust. As part of the response action plan, dust control measures (primarily the wetting of soils) are implemented during excavation.

The stationary dust monitors provide real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust monitors send out automated text and e-mail alerts if the dust monitoring thresholds established for the Site are exceeded. The notification threshold is currently set at 0.1 milligrams per meter cubed (mg/m<sup>3</sup>), which is well below the site-specific action level (SSAL) of 0.621 mg/m<sup>3</sup>.

In general, one stationary dust meter is set in the upwind direction from the planned site work each morning, one or two dust meters are set immediately downwind of the active excavation areas, and two or three dust meters are set in a fan pattern downwind of the excavation areas. Beginning August 23, 2023, and moving forward, the dust meters were placed in similar positions each day. Station A is typically placed upwind from active excavation areas, Stations B and C are placed immediately downwind of excavation areas, and Stations D and E were set further downwind of excavation nearer to the Site perimeter. The Braun Intertec field staff professional near the work area also has a portable dust meter on them. Braun Intertec also monitors the readings from a stationary dust meter located approximately 2

miles from the Site that is part of a regional air quality study to monitor regional air quality to see if that affects our particulate measurements.

One or two dust monitors were left operating at the Site overnight and over the weekend when the Site was not active to ensure dust levels remained below the SSAL.

While exceedances in dust levels did occur, they were short in duration, lasting no longer than a few minutes. The exceedances were observed to be a result of disturbances, typically caused by trucks and construction equipment driving along clean soils on the built haul roadways and dust control measures in the parking lot and on Larpenteur Ave (i.e., sweeping of dirt from paved surfaces) There was no visible dust observed from windrows and stockpiles of mercury contaminated soil.

For the week of October 2<sup>nd</sup> to October 6<sup>th</sup>, the summary of the dust monitoring results is below:

Particulate Station ID	Average Particulate Concentration (mg/m <sup>3</sup> )	Maximum Concentration (mg/m <sup>3</sup> )	Exceedances above SSAL (0.621 mg/m <sup>3</sup> )	Action Taken (if applicable)
A	0.018	1.1 (singular reading at 14:09:40 on 10/2/2023)	None besides the max concentration stated already.	None
B	0.047	6.85 and 2.11 (singular readings during setup at 8:11:55 on 10/2/2023)	Several readings through the week; placement directly adjacent to truck loading areas and active truck routes along haul roads in verified clean soil.	Additional dust control was implemented whenever above 0.2
C	0.017	1.66 (singular reading at 13:29:23 on 10/3/2023)	A few readings on 10/3/2023. Elevated readings occurred during truck traffic and hauling of soils.	Additional dust control was implemented whenever above 0.2
D	0.026	4.77 (singular reading at 13:58:38 on 10/3/2023)	Several readings through the week. Elevated readings occurred during truck traffic and hauling of soils.	Additional dust control was implemented whenever above 0.2
E	0.034	3.7 (singular reading at 14:50:15 on 10/5/2023)	Several reading on 10/5/2023. Set up downwind near mass grading activities.	Additional dust control was implemented whenever above 0.2

SSAL = Site Specific Action Level

In addition to monitoring for particulates via the onsite dust meters, Braun Intertec is collecting bulk air samples down wind of the excavation areas. The bulk air samples are collected from two locations using

pumps and filter cartridges. The two locations are sampled bi-weekly for a total of four samples per week. The bulk air cartridges samples are then sent to Bureau Veritas laboratory for analysis of mercury.

No new data has been received at this time, but several tests are pending.

#### **Upcoming Schedule**

For the week of October 9, 2023, Braun Intertec anticipates another full week of primarily hauling contaminated soil to SKB landfill for disposal pending weather as the forecast is for rain and creation of truck haul road on verified clean soils and related sampling activities.

**Notes**

Exceeds R-SRV

Minnesota Pollution Control Agency (MPCA) Residential/Recreational Soil Reference Values (R-SRVs) updated in March 2023.

mg/kg = Milligrams per kilogram.

< = Not detected at or above the laboratory reporting limit indicated.

--- = Not analyzed or calculated for this parameter or not applicable.

BTV = Background Threshold Value. BTVs are not calculated health based SRVs. The MPCA calculated SRVs were determined to be below background values (MPCA guidance document c-r1-05, April 2021).

[L1] = Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

[M0] = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

[M1] = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

**Table 1**  
**Soil Analytical Results**

			<b>Total Arsenic</b>	<b>Total Mercury</b>
			R-SRV: 9 <sup>BTV</sup>	R-SRV: 2.7

[P6] = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

[R1] = RPD value was outside control limits.

## Mercury Air Sample Analytical Results

**TECHNICAL MEMORANDUM**

**SUBJECT**            **Weekly Environmental Response Action Update**

**SITE**                **The Heights Development, 2200 Larpenteur Avenue East, Saint Paul, Minnesota**

**DATE:**              **10/09/2023 to 10/13/2023**

**FROM:**             **Kenneth Larsen, PE, PG, Vice President, Principal Engineer - Braun Intertec**  
                         **Mark Keefer, PG, Principal Scientist - Braun Intertec**

Braun Intertec Corporation has prepared this Weekly Environmental Response Action Update for The Heights Development project (Site) on behalf of the Saint Paul Port Authority. The weekly update provides a summary of the environmental response actions that were completed at the Site between the listed period including identification of contaminated soil excavation locations, post excavation soil sample locations/results, related air/dust monitoring results, and a summary of the quantity of contaminated soil disposed of at the landfill for the given week and to date. A summary of anticipated environmental response actions for the following week is also provided.

The information and data included in the weekly update was collected by Braun Intertec in accordance with the following documents:

- Revised Response Action Plan, Hillcrest Redevelopment Site Saint Paul, Minnesota MPCA Brownfields Site ID: BF0001281 MDA Project No.: JAL101091523, Dated September 1, 2022.
- Dust Monitoring Plan for Response Action Implementation, The Heights Development Former Hillcrest Golf Course Site, Saint Paul, Minnesota MPCA Brownfields Site ID: BR1281 MDA Project No.: JAL101091523, dated March 31, 2023.

**General Construction Update 10/09/2023 to 10/13/2023**

Soil excavation work began on Monday August 7<sup>th</sup>, 2023.

Transportation of mercury impacted soil took place Monday October 9<sup>th</sup> through Wednesday October 11<sup>th</sup>, 2023, with Type 3 soils where mercury was detected at concentrations below and above 10 milligrams per kilogram (mg/kg) and Type 2 soil. End dump trucks were used to transport these soils from the 6<sup>th</sup> tee, 6<sup>th</sup> rough, 5<sup>th</sup> tee, 5<sup>th</sup> rough, 13<sup>th</sup> tee, 2<sup>nd</sup> fairway, 14<sup>th</sup> tee, 9<sup>th</sup> tee, 2<sup>nd</sup> tee, 10<sup>th</sup> tee and rough, and northwest (NW) Shed Area. Soils with mercury concentrations exceeding 10 mg/kg were transported in end dump trucks lined with poly sheeting. All trucks were covered prior to leaving the Site. On Thursday October 12<sup>th</sup> in the afternoon and all-day Friday October 13<sup>th</sup>, 2023, heavy rains occurred on Site.

Other activities onsite during the week of October 9<sup>th</sup> through 13<sup>th</sup>, 2023 included maintenance of haul roads, placing mulch in heavily saturated areas, dewatering standing ponds, SWPP correction actions,

mass grading activities, and windrowing/stockpiling verified clean soils by Bolander for offsite reuse. Braun Intertec staff collected confirmation soil samples throughout the week.

Braun Intertec also assessed the berm to the south of the maintenance shed along the eastern portion of the Site conducting test pits.

The following is a summary of the daily soil disposal.

Date	# of Truck Loads	Tons of Soil Disposed of at SKB Landfill	Soil Type	Notes
8/16/23	48	925.2	Type 3	>10 mg/kg Mercury
8/17/23	92	1,707.74	Type 3	>10 mg/kg Mercury

10/11/23	5	87.13	Type 3	>10 mg/kg Mercury
10/11/23	58	1,023.50	Type 3	<10 mg/kg Mercury
		<b>Total Tons to Date = 99,130.17</b>		

The areas that have been windrowed and/or excavated as of Friday, October 13<sup>th</sup>, 2023, are as follows:

- Greens: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, 18<sup>th</sup>, and Practice Green 1
- Fairways: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Tee Boxes: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Hot Spots: 8<sup>th</sup> hole rough, 6<sup>th</sup> hole rough, 5<sup>th</sup> hole rough, 4<sup>th</sup> hole rough, 5<sup>th</sup> fairway hotspot, 12<sup>th</sup> fairway hotspot, 15<sup>th</sup> fairway hotspot, 10<sup>th</sup> tee rough, and NW Shed Area

Based upon the work to date, the remedial excavation work is approximately 99% complete as of October 13<sup>th</sup>, 2023. All that is left are the debris containing berm and small hotspots around the former maintenance building and debris soils near the former clubhouse.

See Attachment 1, Photographic Log for recent photos. The excavation progress to date is shown on Figure 1 in Attachment 2.

#### **Confirmation Soil Samples**

In order to confirm that the impacted soils have been removed completely, a rigorous confirmation soil sampling plan is being implemented.

Confirmation soil samples have been collected for laboratory analysis from the areas that have been windrowed. Figure 1 shows the areas that have been sampled, the areas we have received data for, and the areas where we have data pending as of October 13<sup>th</sup>, 2023. The confirmation soil sample results received to date have shown that, for the most part, the excavations have successfully removed all the soils with impacts. However, there may be some confirmation samples where the soils still had mercury at concentrations above the applicable standards. Those areas will be further excavated and then resampled to confirm that all the remaining impacted soils have been removed.

Figure 1 shows the areas which require additional excavation. Confirmation soil sample results are included as Attachment 3, Soil Analytical Table.

#### **Particulate and Air Monitoring Results**

As part of the response actions, Braun Intertec is performing particulate monitoring across the Site to monitor for airborne dust. The particulate dust monitoring consists of multiple stationary dust meters as well as one portable dust monitor.

In addition to the dust meters, there is a weather monitoring station on the Site which is used to monitor wind speed, direction, and temperature. This data is then used to adjust the stationary particulate meters to ensure that they are placed in locations that effectively monitor generated dust. As part of the response action plan, dust control measures (primarily the wetting of soils) are implemented during excavation.

The stationary dust monitors provide real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust monitors send out automated text and e-mail alerts if the dust monitoring thresholds established for the Site are exceeded. The notification threshold is currently set at 0.1 milligrams per meter cubed ( $\text{mg}/\text{m}^3$ ), which is well below the site-specific action level (SSAL) of  $0.621 \text{ mg}/\text{m}^3$ .

In general, one stationary dust meter is set in the upwind direction from the planned site work each morning, one or two dust meters are set immediately downwind of the active excavation areas, and two or three dust meters are set in a fan pattern downwind of the excavation areas. Beginning August 23, 2023, and moving forward, the dust meters were placed in similar positions each day. Station A is typically placed upwind from active excavation areas, Stations B and C are placed immediately downwind of excavation areas, and Stations D and E were set further downwind of excavation nearer to the Site perimeter. The Braun Intertec field staff professional near the work area also has a portable dust meter on them. Braun Intertec also monitors the readings from a stationary dust meter located approximately 2

miles from the Site that is part of a regional air quality study to monitor regional air quality to see if that affects our particulate measurements.

One or two dust monitors were left operating at the Site overnight and over the weekend when the Site was not active to ensure dust levels remained below the SSAL. Near the end of the week, Station C's modem was not connecting to the network so we will not be using Station C for the remainder of the project.

While exceedances in dust levels did occur, they were short in duration, lasting no longer than a few minutes. The exceedances were observed to be a result of disturbances, typically caused by trucks and construction equipment driving along clean soils on the built haul roadways and dust control measures in the parking lot and on Larpenteur Ave (i.e., sweeping of dirt from paved surfaces) There was no visible dust observed from windrows and stockpiles of mercury contaminated soil.

For the week of October 9<sup>th</sup> to October 13<sup>th</sup>, the summary of the dust monitoring results is below:

Particulate Station ID	Average Particulate Concentration (mg/m <sup>3</sup> )	Maximum Concentration (mg/m <sup>3</sup> )	Exceedances above SSAL (0.621 mg/m <sup>3</sup> )	Action Taken (if applicable)
A	0.008	0.138 (singular reading at 09:08:53 on 10/9/2023)	None besides the max concentration stated already.	None
B	0.014	0.844 (singular reading at 16:37:46 on 10/12/2023 and a few elevated readings around that time frame)	One reading of 0.769 on 10/10/23 at 7:46:25 during setup of the dust monitor.	None
C	0.006	0.631 (singular reading at 11:12:43 on 10/11/2023)	None besides the max concentration stated already.	None
D	0.044	11.00 (singular reading at 12:38:01 on 10/12/2023)	Several readings through the week. Elevated readings occurred during truck traffic and hauling of soils.	Additional dust control was implemented whenever above 0.2
E	0.019	1.16 (singular reading at 13:05:58 on 10/11/2023)	Several reading on 10/11/2023. Set up downwind near mass grading activities and haul roads.	Additional dust control was implemented whenever above 0.2

SSAL = Site Specific Action Level

In addition to monitoring for particulates via the onsite dust meters, Braun Intertec is collecting bulk air samples down wind of the excavation areas. The bulk air samples are collected from two locations using

pumps and filter cartridges. The two locations are sampled bi-weekly for a total of four samples per week. The bulk air cartridges samples are then sent to Bureau Veritas laboratory for analysis of mercury.

The analytical results received for the air samples collected on 10/3/2023 and 10/5/2023 all came back non-detect <0.00010 to <0.00011 mg/m<sup>3</sup> for mercury.

#### **Upcoming Schedule**

For the week of October 16, 2023, Braun Intertec anticipates another partial week of primarily hauling contaminated soil to SKB landfill for disposal pending site conditions and weather as the forecast shows a slight chance of rain on Thursday and creation of truck haul road on verified clean soils and related sampling activities.

**Notes**

Exceeds R-SRV

Minnesota Pollution Control Agency (MPCA) Residential/Recreational Soil Reference Values (R-SRVs) updated in March 2023.

mg/kg = Milligrams per kilogram.

< = Not detected at or above the laboratory reporting limit indicated.

**Table 1**  
**Soil Analytical Results**  
**The Heights**  
**Saint Paul, Minnesota**  
**Project B1903316.02**

Location	Sample Identifier	Date Collected	Compound (mg/kg)	
			<b>Total Arsenic</b>	<b>Total Mercury</b>
			R-SRV: 9 <sup>BTV</sup>	R-SRV: 2.7

--- = Not analyzed or calculated for this parameter or not applicable.

BTV = Background Threshold Value. BTVs are not calculated health based SRVs. The MPCA calculated SRVs were determined to be below background values (MPCA guidance document c-r1-05, April 2021).

[L1] = Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

[M0] = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

[M1] = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

[P6] = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

[R1] = RPD value was outside control limits.

## Mercury Air Sample Analytical Results

**TECHNICAL MEMORANDUM**

**SUBJECT**        **Weekly Environmental Response Action Update**

**SITE**            **The Heights Development, 2200 Larpenteur Avenue East, Saint Paul, Minnesota**

**DATE:**          **10/16/2023 to 10/20/2023**

**FROM:**          **Kenneth Larsen, PE, PG, Vice President, Principal Engineer - Braun Intertec**  
                     **Mark Keefer, PG, Principal Scientist - Braun Intertec**

Braun Intertec Corporation has prepared this Weekly Environmental Response Action Update for The Heights Development project (Site) on behalf of the Saint Paul Port Authority. The weekly update provides a summary of the environmental response actions that were completed at the Site between the listed period including identification of contaminated soil excavation locations, post excavation soil sample locations/results, related air/dust monitoring results, and a summary of the quantity of contaminated soil disposed of at the landfill for the given week and to date. A summary of anticipated environmental response actions for the following week is also provided.

The information and data included in the weekly update was collected by Braun Intertec in accordance with the following documents:

- Revised Response Action Plan, Hillcrest Redevelopment Site Saint Paul, Minnesota MPCA Brownfields Site ID: BF0001281 MDA Project No.: JAL101091523, Dated September 1, 2022.
- Dust Monitoring Plan for Response Action Implementation, The Heights Development Former Hillcrest Golf Course Site, Saint Paul, Minnesota MPCA Brownfields Site ID: BR1281 MDA Project No.: JAL101091523, dated March 31, 2023.

**General Construction Update 10/16/2023 to 10/20/2023**

Soil excavation work began on Monday August 7<sup>th</sup>, 2023.

The first part of the week there was no hauling of contaminated soils to SKB. Export of verified clean reusable soils were hauled to various offsite locations from the middle of the Site. These were also days for prep of hauling out the petroleum impacted soil with intermixed debris from the berm along the eastern portion of the Site near the former maintenance building. On Wednesday October 17<sup>th</sup> the berm, known as "Debris Area 1" was excavated and transported to SKB under the Petroleum Contaminated Soil with Intermixed Debris manifest profile. The previous week's test pits showed that there was little to no debris laden soil in the south half of the berm, and the north half had more indications of debris laden soils to a depth of about 4-5 feet below ground surface (bgs). The soil observed was black and gray colored sandy clay intermixed with ash, brick, concrete, wood chunks and fragments, glass, and clinkers throughout the excavation. No elevated PID readings were noted though.

Side dump trucks were used to transport these soils from the north half of the berm excavation. All trucks were covered prior to leaving the Site.

Other activities onsite during the week of October 23<sup>rd</sup> through 27<sup>th</sup>, 2023 included maintenance of haul roads, placing mulch in heavily saturated areas, dewatering standing ponds, SWPP correction actions, mass grading activities, and windrowing/stockpiling verified clean soils by Bolander for offsite reuse. Braun Intertec staff collected confirmation soil samples throughout the week.

The following is a summary of the daily soil disposal.

Date	# of Truck Loads	Tons of Soil Disposed of at SKB Landfill	Soil Type	Notes
8/16/23	48	925.2	Type 3	>10 mg/kg Mercury
8/17/23	92	1,707.74	Type 3	>10 mg/kg Mercury

--

---

The areas that have been windrowed and/or excavated as of Friday, October 20<sup>th</sup>, 2023, are as follows:

- Greens: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, 18<sup>th</sup>, and Practice Green 1
- Fairways: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Tee Boxes: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Hot Spots: 8<sup>th</sup> hole rough, 6<sup>th</sup> hole rough, 5<sup>th</sup> hole rough, 4<sup>th</sup> hole rough, 5<sup>th</sup> fairway hotspot, 12<sup>th</sup> fairway hotspot, 15<sup>th</sup> fairway hotspot, 10<sup>th</sup> tee rough, NW Shed Area, Main HS-1, and Main HS-2
- Debris Area 1 (North and South Berm)

Based upon the work to date, the remedial excavation work is approximately 99% complete as of October 20<sup>th</sup>, 2023. All that is left are a couple small hotspots around the former maintenance building and debris soils near the former clubhouse.

See Attachment 1, Photographic Log for recent photos. The excavation progress to date is shown on Figure 1 in Attachment 2.

#### **Confirmation Soil Samples**

In order to confirm that the impacted soils have been removed completely, a rigorous confirmation soil sampling plan is being implemented.

Confirmation soil samples have been collected for laboratory analysis from the areas that have been windrowed. Figure 1 shows the areas that have been sampled, the areas we have received data for, and the areas where we have data pending as of October 20<sup>th</sup>, 2023. The confirmation soil sample results received to date have shown that, for the most part, the excavations have successfully removed all the soils with impacts. However, there may be some confirmation samples where the soils still had mercury at concentrations above the applicable standards. Those areas will be further excavated and then resampled to confirm that all the remaining impacted soils have been removed.

Figure 1 shows the areas which require additional excavation. Confirmation soil sample results are included as Attachment 3, Soil Analytical Table.

#### **Particulate and Air Monitoring Results**

As part of the response actions, Braun Intertec is performing particulate monitoring across the Site to monitor for airborne dust. The particulate dust monitoring consists of multiple stationary dust meters as well as one portable dust monitor.

In addition to the dust meters, there is a weather monitoring station on the Site which is used to monitor wind speed, direction, and temperature. This data is then used to adjust the stationary particulate meters to ensure that they are placed in locations that effectively monitor generated dust. As part of the response action plan, dust control measures (primarily the wetting of soils) are implemented during excavation.

The stationary dust monitors provide real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust monitors send out automated text and e-mail alerts

if the dust monitoring thresholds established for the Site are exceeded. The notification threshold is currently set at 0.1 milligrams per meter cubed ( $\text{mg}/\text{m}^3$ ), which is well below the site-specific action level (SSAL) of  $0.621 \text{ mg}/\text{m}^3$ .

In general, one stationary dust meter is set in the upwind direction from the planned site work each morning, one or two dust meters are set immediately downwind of the active excavation areas, and two or three dust meters are set in a fan pattern downwind of the excavation areas. Beginning August 23, 2023, and moving forward, the dust meters were placed in similar positions each day. Station A is typically placed upwind from active excavation areas, Stations B and C are placed immediately downwind of excavation areas, and Stations D and E were set further downwind of excavation nearer to the Site perimeter. The Braun Intertec field staff professional near the work area also has a portable dust meter on them. Braun Intertec also monitors the readings from a stationary dust meter located approximately 2 miles from the Site that is part of a regional air quality study to monitor regional air quality to see if that affects our particulate measurements.

One or two dust monitors were left operating at the Site overnight and over the weekend when the Site was not active to ensure dust levels remained below the SSAL. Near the end of the week, Station C's modem was not connecting to the network so we will not be using Station C for the remainder of the project.

While exceedances in dust levels did occur, they were short in duration, lasting no longer than a few minutes. The exceedances were observed to be a result of disturbances, typically caused by trucks and construction equipment driving along clean soils on the built haul roadways and dust control measures in the parking lot and on Larpenteur Ave (i.e., sweeping of dirt from paved surfaces) There was no visible dust observed from stockpiles of mercury and petroleum impacted and debris laden contaminated soil.

For the week of October 16<sup>th</sup> to October 20<sup>th</sup>, the summary of the dust monitoring results is below:

Particulate Station ID	Average Particulate Concentration ( $\text{mg}/\text{m}^3$ )	Maximum Concentration ( $\text{mg}/\text{m}^3$ )	Exceedances above SSAL ( $0.621 \text{ mg}/\text{m}^3$ )	Action Taken (if applicable)
A	0.002	1.02 (singular reading at 07:47:32 on 10/19/2023)	0.85 which was 15 seconds after the max reading described. Other than that, none besides the max concentration stated already.	Continued to implement dust control measures with watering roads.
B	0.023	0.934 (singular reading at 16:04:02 on 10/19/2023 and a few elevated readings around that time frame)	None besides the max concentration stated already.	Continued to implement dust control measures with watering roads.

D	0.024	0.75 (singular reading at 14:49:39 on 10/23/2023)	None besides the max concentration stated already.	Continued to implement dust control measures with watering roads.
E	0.038	2.35 (singular reading at 17:09:29 on 10/17/2023 during take down of the equipment)	None besides the max concentration stated already.	Continued to implement dust control measures with watering roads.

SSAL = Site Specific Action Level

In addition to monitoring for particulates via the onsite dust meters, Braun Intertec is collecting bulk air samples down wind of the excavation areas. The bulk air samples are collected from two locations using pumps and filter cartridges. The two locations are sampled bi-weekly for a total of four samples per week. The bulk air cartridges samples are then sent to Bureau Veritas laboratory for analysis of mercury.

The analytical results received for the air samples collected on 10/10/2023 all came back non-detect <0.00010 mg/m3 for mercury.

#### **Upcoming Schedule**

For the week of October 23<sup>rd</sup>, 2023, Braun Intertec anticipates another partial week of primarily hauling contaminated soil to SKB landfill for disposal pending site conditions and weather as the forecast shows rain forecasted for Tuesday, Thursday, and Friday and creation of truck haul road on verified clean soils and related sampling activities.

Notes				
			Exceeds R-SRV	

Minnesota Pollution Control Agency (MPCA) Residential/Recreational Soil Reference Values (R-SRVs) updated in March 2023.

mg/kg = Milligrams per kilogram.

< = Not detected at or above the laboratory reporting limit indicated.

--- = Not analyzed or calculated for this parameter or not applicable.

BTV = Background Threshold Value. BTVs are not calculated health based SRVs. The MPCA calculated SRVs were determined to be below background values (MPCA guidance document c-r1-05, April 2021).

[L1] = Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

[M0] = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

[M1] = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

[P6] = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

[R1] = RPD value was outside control limits.

### GENERAL COMMENTS

Unless otherwise noted below the following statements apply: 1) all samples were received in acceptable condition, 2) all quality control results associated with this sample set were within acceptable limits and /or do not adversely affect the reported results and 3) the industrial hygiene results have not been blank corrected.

The client provided their pertinent field sampling data on the analysis request paperwork submitted with the samples. Results apply to the sample as received.

**TECHNICAL MEMORANDUM**

**SUBJECT**        **Weekly Environmental Response Action Update**

**SITE**            **The Heights Development, 2200 Larpenteur Avenue East, Saint Paul, Minnesota**

**DATE:**          **10/30/2023 to 11/3/2023**

**FROM:**          **Kenneth Larsen, PE, PG, Vice President, Principal Engineer - Braun Intertec**  
                     **Mark Keefer, PG, Principal Scientist - Braun Intertec**

Braun Intertec Corporation has prepared this Weekly Environmental Response Action Update for The Heights Development project (Site) on behalf of the Saint Paul Port Authority. The weekly update provides a summary of the environmental response actions that were completed at the Site between the listed period including identification of contaminated soil excavation locations, post excavation soil sample locations/results, related air/dust monitoring results, and a summary of the quantity of contaminated soil disposed of at the landfill for the given week and to date. A summary of anticipated environmental response actions for the following week is also provided.

The information and data included in the weekly update was collected by Braun Intertec in accordance with the following documents:

- Revised Response Action Plan, Hillcrest Redevelopment Site Saint Paul, Minnesota MPCA Brownfields Site ID: BF0001281 MDA Project No.: JAL101091523, Dated September 1, 2022.
- Dust Monitoring Plan for Response Action Implementation, The Heights Development Former Hillcrest Golf Course Site, Saint Paul, Minnesota MPCA Brownfields Site ID: BR1281 MDA Project No.: JAL101091523, dated March 31, 2023.

**General Construction Update 10/30/2023 to 11/3/2023**

Soil excavation work began on Monday August 7<sup>th</sup>, 2023.

Snow flurries started on Monday and ended Tuesday, making the Site very muddy and slippery. No contaminated soils were hauled to SKB this week except for two loads of Type 3 <10 mg/kg mercury impacted soils hauled out on November 2. Export reuse topsoil was hauled to another jobsite. The topsoil came from a windrow near the north side of the Site by the entrances. We excavated out the last hotspot (Main HS-3) within the proposed Xcel Energy building footprint. The last two hot spots (Main HS-4 and Main HS-5) may not be accessible until the ground freezes since the location is under water and very close to the perimeter fencing for slope stability.

While doing soil correction near the east entrance along McKnight, debris laden soils was encountered near the former maintenance shed footprint. The debris soils consisted of wood, brick, concrete, metal, clinkers, asphalt. No elevated PID readings were observed of the soils excavated. The debris soil was from

ground surface down to about 3-4 feet below ground surface (bgs). Below the debris laden soils was peat and/or gray clay. The debris laden soils were then hauled with off roads to the north of the Site where "Debris Area 2" is located for loading and off-site transport planned for the week of November 7, 2023.

Other activities onsite during the week of October 30<sup>th</sup>, 2023 through November 3<sup>rd</sup>, 2023 included maintenance of haul roads, placing mulch in heavily saturated areas, dewatering standing ponds, SWPP correction actions, mass grading activities, and windrowing/stockpiling verified clean soils by Bolander for offsite and on-site reuse. Central Landscaping was on site applying hydro seed for winter soil prep. Braun Intertec staff also collected confirmation soil samples from a couple of the hotspot locations as well as sidewalls.

The following is a summary of the daily soil disposal.

Date	# of Truck Loads	Tons of Soil Disposed of at SKB Landfill	Soil Type	Notes
8/16/23	48	925.2	Type 3	>10 mg/kg Mercury
8/17/23	92	1,707.74	Type 3	>10 mg/kg Mercury

11/2/23	2	43.88	Type 3	<10 mg/kg Mercury
		<b>Total Tons to Date = 105,665.33</b>		

The areas that have been windrowed and/or excavated as of Friday, October 20<sup>th</sup>, 2023, are as follows:

- Greens: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, 18<sup>th</sup>, and Practice Green 1
- Fairways: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Tee Boxes: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Hot Spots: 8<sup>th</sup> hole rough, 6<sup>th</sup> hole rough, 5<sup>th</sup> hole rough, 4<sup>th</sup> hole rough, 5<sup>th</sup> fairway hotspot, 12<sup>th</sup> fairway hotspot, 15<sup>th</sup> fairway hotspot, 10<sup>th</sup> tee rough, NW Shed Area, Main HS-1, and Main HS-2, Main HS-3, Path HS-1, Main WO
- Debris Area 1 (North and South Berm bases and north half sidewalls)

Based upon the work to date, the remedial excavation work is approximately 99% complete as of November 3<sup>rd</sup>, 2023. All that is left are the two hotspots (Main HS-4 and Main HS-5) that are submerged in water, Debris Soil Area 2 by the former clubhouse, a small hotspot near the Debris Soil Area 2, and hauling out the stockpiles of <10 mg/kg Mercury and Debris Laden Soils.

See Attachment 1, Photographic Log for recent photos. The excavation progress to date is shown on Figure 1 in Attachment 2.

#### **Confirmation Soil Samples**

In order to confirm that the impacted soils have been removed completely, a rigorous confirmation soil sampling plan is being implemented.

Confirmation soil samples have been collected for laboratory analysis from the berm and hot spot areas. Figure 1 shows the areas that have been sampled, the areas we have received data for, and the areas where we have data pending as of November 3<sup>rd</sup>, 2023. The confirmation soil sample results received to date have shown that, for the most part, the excavations have successfully removed all the soils with impacts. However, there may be some confirmation samples where the soils still had mercury at concentrations above the applicable standards. Those areas will be further excavated and then resampled to confirm that all the remaining impacted soils have been removed.

Figure 1 shows the areas which require additional excavation. Confirmation soil sample results are included as Attachment 3, Soil Analytical Table.

### **Particulate and Air Monitoring Results**

As part of the response actions, Braun Intertec is performing particulate monitoring across the Site to monitor for airborne dust. The particulate dust monitoring consists of multiple stationary dust meters as well as one portable dust monitor.

In addition to the dust meters, there is a weather monitoring station on the Site which is used to monitor wind speed, direction, and temperature. This data is then used to adjust the stationary particulate meters to ensure that they are placed in locations that effectively monitor generated dust. As part of the response action plan, dust control measures (primarily the wetting of soils) are implemented during excavation.

The stationary dust monitors provide real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust monitors send out automated text and e-mail alerts if the dust monitoring thresholds established for the Site are exceeded. The notification threshold is currently set at 0.1 milligrams per meter cubed ( $\text{mg}/\text{m}^3$ ), which is well below the site-specific action level (SSAL) of  $0.621 \text{ mg}/\text{m}^3$ .

Since remediation is nearly complete, Braun Intertec has reduced the number of dust monitors from 5 to 2 units. In general, one stationary dust meter is set in the upwind direction from the planned site work each morning and the other one is downwind of the excavation areas. Beginning October 30, 2023, and moving forward, the dust meters will be placed in similar positions each day. Depending on wind direction and when set overnight, the monitors will be placed upwind from active excavation areas and immediately downwind of excavation areas. During excavation and hauling of soils, the Braun Intertec field staff professional near the work area also has a portable dust meter on them. Braun Intertec also monitors the readings from a stationary dust meter located approximately 2 miles from the Site that is part of a regional air quality study to monitor regional air quality to see if that affects our particulate measurements.

Both dust monitors were left operating at the Site overnight and over the weekend when the Site was not active to ensure dust levels remained below the SSAL.

While exceedances in dust levels did occur, they were short in duration, lasting no longer than a few seconds. The exceedances were observed to be a result of disturbances, typically caused by trucks and construction equipment driving along clean soils on the built haul roadways and dust control measures in the parking lot and on Larpenteur Ave and McKnight Road (i.e., sweeping of dirt from paved surfaces). There was no visible dust observed from stockpiles of mercury and petroleum impacted with intermixed debris laden contaminated soil.

For the week of October 30<sup>th</sup> to November 3<sup>rd</sup>, the summary of the dust monitoring results is below:

Particulate Station ID	Average Particulate Concentration (mg/m <sup>3</sup> )	Maximum Concentration (mg/m <sup>3</sup> )	Exceedances above SSAL (0.621 mg/m <sup>3</sup> )	Action Taken (if applicable)
A	0.044	0.141 (singular reading at 00:18:13 on 11/2/2023 and a few elevated readings around that time frame)	None besides the max concentration stated already.	Continued to implement dust control measures with watering roads and dampening working conditions.
B	0.033	0.209 (singular reading at 14:51:03 on 11/6/2023 and a few elevated readings around that time frame)	None besides the max concentration stated already.	Continued to implement dust control measures with watering roads and dampening working conditions.

SSAL = Site Specific Action Level

In addition to monitoring for particulates via the onsite dust meters, Braun Intertec is collecting bulk air samples down wind of the excavation areas. The bulk air samples are collected from two locations using pumps and filter cartridges. The two locations were sampled once this week and for a total of two samples for the week. The bulk air cartridges samples are then sent to Bureau Veritas laboratory for analysis of mercury.

The analytical results received for the air samples collected on 11/2/2023 all came back non-detect ranging from <0.00010 to <0.00012 mg/m<sup>3</sup> for mercury.

#### **Upcoming Schedule**

For the week of November 6<sup>th</sup>, 2023, Braun Intertec anticipates another partial week of primarily hauling contaminated soil to SKB landfill for disposal pending site conditions and weather, and creation of truck haul road on verified clean soils, cutting and filling portions of the Site with clean reuse soils and related sampling activities.

**Notes**

Exceeds R-SRV

Minnesota Pollution Control Agency (MPCA) Residential/Recreational Soil Reference Values (R-SRVs) updated in March 2023.

mg/kg = Milligrams per kilogram.

< = Not detected at or above the laboratory reporting limit indicated.

--- = Not analyzed or calculated for this parameter or not applicable.

BTV = Background Threshold Value. BTVs are not calculated health based SRVs. The MPCA calculated SRVs were determined to be below background values (MPCA guidance document c-r1-05, April 2021).

[L1] = Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

[M0] = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

[M1] = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

[P6] = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

[R1] = RPD value was outside control limits.

## **Mercury Air Sample Analytical Results**

**TECHNICAL MEMORANDUM**

**SUBJECT**            **Weekly Environmental Response Action Update**

**SITE**                **The Heights Development, 2200 Larpenteur Avenue East, Saint Paul, Minnesota**

**DATE:**              **11/6/2023 to 11/10/2023**

**FROM:**             **Kenneth Larsen, PE, PG, Vice President, Principal Engineer - Braun Intertec**  
                             **Mark Keefer, PG, Principal Scientist - Braun Intertec**

Braun Intertec Corporation has prepared this Weekly Environmental Response Action Update for The Heights Development project (Site) on behalf of the Saint Paul Port Authority. The weekly update provides a summary of the environmental response actions that were completed at the Site between the listed period including identification of contaminated soil excavation locations, post excavation soil sample locations/results, related air/dust monitoring results, and a summary of the quantity of contaminated soil disposed of at the landfill for the given week and to date. A summary of anticipated environmental response actions for the following week is also provided.

The information and data included in the weekly update was collected by Braun Intertec in accordance with the following documents:

- Revised Response Action Plan, Hillcrest Redevelopment Site Saint Paul, Minnesota MPCA Brownfields Site ID: BF0001281 MDA Project No.: JAL101091523, Dated September 1, 2022.
- Dust Monitoring Plan for Response Action Implementation, The Heights Development Former Hillcrest Golf Course Site, Saint Paul, Minnesota MPCA Brownfields Site ID: BR1281 MDA Project No.: JAL101091523, dated March 31, 2023.

**General Construction Update 11/6/2023 to 11/10/2023**

Soil excavation work began on Monday August 7<sup>th</sup>, 2023.

Bolander is continuing to work on cutting and filling the Xcel Energy pad and parcel this week. Soil corrections has also been taking place along the eastern portion near the McKnight entrance gate. Organic soils are being hauled and stockpiled to the west in the middle of the Site with off road dump trucks. Grading machines are bringing common reuse soils from the western portion of the Site and raising grade to the east. Export reuse topsoil was hauled to another jobsite. The topsoil came from various stockpiles throughout the Site that were consolidated as one main stockpile.

While doing soil correction near the east entrance along McKnight, more debris laden soils was encountered near and under the former maintenance building footprint. The debris soils consisted of wood, brick, concrete, metal, clinkers, and asphalt. No elevated PID readings were observed of the soils excavated. The debris soil was from ground surface down to about 3-4 feet below ground surface (bgs).

Below the debris laden soils was peat and/or gray clay. The debris laden soils were then hauled with off roads to the north of the Site where “Debris Area 2” is located for loading and off-site transport planned for later in the week.

A crushed flame trap was also encountered during soil correction. The location was on the eastern edge of the former maintenance building. The flame trap was empty. The flame tap and surrounding soils were excavated and included in the intermixed debris stockpile. A bottom sample was taken for confirmation.

Contaminated soils were hauled out to SKB on Thursday the 9<sup>th</sup> and Friday the 10<sup>th</sup>. The first part was hauling the debris soils from near the former maintenance shed, then once that got done switched over to “Debris Area 2” soils. A few loads of <10 mg/kg mercury impacted soils got hauled out as well.

Other activities onsite during the week of November 6<sup>th</sup>, 2023, through November 10<sup>th</sup>, 2023 included maintenance of haul roads, placing mulch in heavily saturated areas, dewatering standing ponds into the driving range area, SWPP correction actions, mass grading activities, and windrowing/stockpiling verified clean soils by Bolander for offsite and on-site reuse. Central Landscaping was on site applying hydro seed for winter soil prep. Braun Intertec staff also collected confirmation soil samples from a couple of the hotspot locations as well as sidewalls.

The following is a summary of the daily soil disposal.

Date	# of Truck Loads	Tons of Soil Disposed of at SKB Landfill	Soil Type	Notes
8/16/23	48	925.2	Type 3	>10 mg/kg Mercury
8/17/23	92	1,707.74	Type 3	>10 mg/kg Mercury

11/10/23	12	181.57	Type 3	<10 mg/kg Mercury
<b>Total Tons to Date = 108,649.16</b>				

The areas that have been windrowed and/or excavated as of Friday, November 10<sup>th</sup>, 2023, are as follows:

- Greens: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, 18<sup>th</sup>, and Practice Green 1
- Fairways: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Tee Boxes: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Hot Spots: 8<sup>th</sup> hole rough, 6<sup>th</sup> hole rough, 5<sup>th</sup> hole rough, 4<sup>th</sup> hole rough, 5<sup>th</sup> fairway hotspot, 12<sup>th</sup> fairway hotspot, 15<sup>th</sup> fairway hotspot, 10<sup>th</sup> tee rough, NW Shed Area, Main HS-1, Main HS-2, Main HS-3, Path HS-1, and Main WO
- Debris Area 1 (North and South Berm bases and north half sidewalls)

Based upon the work to date, the remedial excavation work is approximately 99% complete as of November 10<sup>th</sup>, 2023. All that is left are the two hotspots (Main HS-4 and Main HS-5) that are submerged in water, the remaining "Debris Soil Area 2" by the former clubhouse, a small hotspot near the "Debris Soil Area 2" and hauling out the remaining stockpile of <10 mg/kg Mercury soils.

See Attachment 1, Photographic Log for recent photos. The excavation progress to date is shown on Figure 1 in Attachment 2.

#### **Confirmation Soil Samples**

In order to confirm that the impacted soils have been removed completely, a rigorous confirmation soil sampling plan is being implemented.

Confirmation soil samples have been collected for laboratory analysis from the berm and hot spot areas. Figure 1 shows the areas that have been sampled, the areas we have received data for, and the areas

where we have data pending as of November 10<sup>th</sup>, 2023. The confirmation soil sample results received to date have shown that, for the most part, the excavations have successfully removed all the soils with impacts. However, there may be some confirmation samples where the soils still had mercury at concentrations above the applicable standards. Those areas will be further excavated and then resampled to confirm that all the remaining impacted soils have been removed.

Figure 1 shows the areas which require additional excavation. Confirmation soil sample results are included as Attachment 3, Soil Analytical Table.

### **Particulate and Air Monitoring Results**

As part of the response actions, Braun Intertec is performing particulate monitoring across the Site to monitor for airborne dust. The particulate dust monitoring consists of multiple stationary dust meters as well as one portable dust monitor.

In addition to the dust meters, there is a weather monitoring station on the Site which is used to monitor wind speed, direction, and temperature. This data is then used to adjust the stationary particulate meters to ensure that they are placed in locations that effectively monitor generated dust. As part of the response action plan, dust control measures (primarily the wetting of soils) are implemented during excavation.

The stationary dust monitors provide real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust monitors send out automated text and e-mail alerts if the dust monitoring thresholds established for the Site are exceeded. The notification threshold is currently set at 0.1 milligrams per meter cubed ( $\text{mg}/\text{m}^3$ ), which is well below the site-specific action level (SSAL) of  $0.621 \text{ mg}/\text{m}^3$ .

Since remediation is nearly complete, Braun Intertec has reduced the number of dust monitors from 5 to 2 units. In general, one stationary dust meter is set in the upwind direction from the planned site work each morning and the other one is downwind of the excavation areas. Beginning October 30, 2023, and moving forward, the dust meters will be placed in similar positions each day. Depending on wind direction and when set overnight, the monitors will be placed upwind from active excavation areas and immediately downwind of excavation areas. During excavation and hauling of soils, the Braun Intertec field staff professional near the work area also has a portable dust meter on them. Braun Intertec also monitors the readings from a stationary dust meter located approximately 2 miles from the Site that is part of a regional air quality study to monitor regional air quality to see if that affects our particulate measurements.

Both dust monitors were left operating at the Site overnight and over the weekend when the Site was not active to ensure dust levels remained below the SSAL.

While exceedances in dust levels did occur, they were short in duration, lasting no longer than a few seconds. The exceedances were observed to be a result of disturbances, typically caused by trucks and construction equipment driving along clean soils on the built haul roadways and dust control measures in the parking lot and on Larpenteur Ave and McKnight Road (i.e., sweeping of dirt from paved surfaces). There was no visible dust observed from stockpiles of mercury and petroleum impacted with intermixed debris laden contaminated soil.

For the week of November 6<sup>th</sup> to November 10<sup>th</sup>, the summary of the dust monitoring results is below:

Particulate Station ID	Average Particulate Concentration (mg/m <sup>3</sup> )	Maximum Concentration (mg/m <sup>3</sup> )	Exceedances above SSAL (0.621 mg/m <sup>3</sup> )	Action Taken (if applicable)
A	0.029	1.83 (singular reading at 13:46:16 on 11/10/2023 and a few elevated readings around that time frame)	None besides the max concentration stated already.	Continued to implement dust control measures with watering roads and dampening working conditions.
B	0.02	0.67 (singular reading at 16:00:59 on 11/9/2023 and a few elevated readings around that time frame)	None besides the max concentration stated already.	Continued to implement dust control measures with watering roads and dampening working conditions.

SSAL = Site Specific Action Level

In addition to monitoring for particulates via the onsite dust meters, Braun Intertec is collecting bulk air samples down wind of the excavation areas. The bulk air samples are collected from two locations using pumps and filter cartridges. The two locations were sampled once last week and for a total of two samples for the week. The bulk air cartridges samples are then sent to Bureau Veritas laboratory for analysis of mercury.

Both samples collected were non-detect at <0.00011 milligrams per meter cubed.

#### **Upcoming Schedule**

For the week of November 13<sup>th</sup>, 2023, Braun Intertec anticipates another partial week of primarily hauling contaminated soil to SKB landfill for disposal pending site conditions and weather, and creation of truck haul road on verified clean soils, cutting and filling portions of the Site with clean reuse soils, hauling export reuse soils, and related sampling activities.

**Notes**

Exceeds R-SRV
Exceeded R-SRV - Soil Excavated and Disposed off-site

Minnesota Pollution Control Agency (MPCA) Residential/Recreational Soil Reference Values (R-SRVs) updated in March 2023.

mg/kg = Milligrams per kilogram.

< = Not detected at or above the laboratory reporting limit indicated.

--- = Not analyzed or calculated for this parameter or not applicable.

BTV = Background Threshold Value. BTVs are not calculated health based SRVs. The MPCA calculated SRVs were determined to be below background values (MPCA guidance document c-r1-05, April 2021).

[L1] = Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

[M0] = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

[M1] = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

[P6] = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

[R1] = RPD value was outside control limits.

**SUBJECT**            **Weekly Environmental Response Action Update**

**SITE**                **The Heights Development, 2200 Larpenteur Avenue East, Saint Paul, Minnesota**

**DATE:**              **11/13/2023 to 11/17/2023**

**FROM:**             **Kenneth Larsen, PE, PG, Vice President, Principal Engineer - Braun Intertec**  
                             **Mark Keefer, PG, Principal Scientist - Braun Intertec**

Braun Intertec Corporation has prepared this Weekly Environmental Response Action Update for The Heights Development project (Site) on behalf of the Saint Paul Port Authority. The weekly update provides a summary of the environmental response actions that were completed at the Site between the listed period including identification of contaminated soil excavation locations, post excavation soil sample locations/results, related air/dust monitoring results, and a summary of the quantity of contaminated soil disposed of at the landfill for the given week and to date. A summary of anticipated environmental response actions for the following week is also provided.

The information and data included in the weekly update was collected by Braun Intertec in accordance with the following documents:

- Revised Response Action Plan, Hillcrest Redevelopment Site Saint Paul, Minnesota MPCA Brownfields Site ID: BF0001281 MDA Project No.: JAL101091523, Dated September 1, 2022.
- Dust Monitoring Plan for Response Action Implementation, The Heights Development Former Hillcrest Golf Course Site, Saint Paul, Minnesota MPCA Brownfields Site ID: BR1281 MDA Project No.: JAL101091523, dated March 31, 2023.

**General Construction Update 11/13/2023 to 11/17/2023**

Soil excavation work began on Monday August 7<sup>th</sup>, 2023.

Bolander is continuing to work on cutting and filling the Xcel Energy pad and parcel this week. Soil corrections has also been taking place along the eastern portion near the McKnight entrance gate. Organic soils are being hauled and stockpiled to the west in the middle of the Site with off road dump trucks. Grading machines are bringing common reuse soils from the western portion of the Site and raising grade to the east. Export reuse topsoil was hauled to another jobsite. The topsoil came from various stockpiles throughout the Site that were consolidated as one main stockpile.

While digging out “Debris Area 2” transite piping was found around the perimeter of the pool footprint. Bolander segregated the piping and placed it aside and covered it in poly. Hummingbird was on site Wednesday to remove the transite pipe and haul away in a roll off dumpster. To this date, all asbestos

containing material was removed from the Site, including the transite pipe found by Hole 6 green at the start of the job.

Impacted soils were hauled offsite on Tuesday November 14<sup>th</sup>. Hauling started with removing 10 loads of <10 mg/kg mercury impacted soils from the hotspots. A total of 64 loads of debris laden contaminated soils came from the Debris Area 2 excavation.

To verify Debris Area 2 was complete, Braun and Bolander dug test pits from depths ranging to 4 feet to 6 feet below ground surface (bgs) surrounding the Debris Area 2 extents. All test pits showed no debris, staining, or odors. All test pits were marked with the GPS for documentation.

Other activities onsite during the week of November 13<sup>th</sup>, 2023, through November 17<sup>th</sup>, 2023 included maintenance of haul roads, placing mulch in heavily saturated areas, dewatering standing ponds into the driving range area, SWPP correction actions, mass grading activities, and windrowing/stockpiling verified clean soils by Bolander for offsite and on-site reuse. Central Landscaping was on site applying hydro seed for winter soil prep. Braun Intertec staff also collected confirmation soil samples from the Debris Area 2, flam trap sidewall, and Debris Area 2 hotspot as well as sidewalls. One last round of mercury air sampling was taken this week.

The following is a summary of the daily soil disposal.

Date	# of Truck Loads	Tons of Soil Disposed of at SKB Landfill	Soil Type	Notes
8/16/23	48	925.2	Type 3	>10 mg/kg Mercury
8/17/23	92	1,707.74	Type 3	>10 mg/kg Mercury
8/18/23	97	1,819.81	Type 3	>10 mg/kg Mercury
8/21/23	70	1,356.04	Type 3	<10 mg/kg Mercury
8/21/23	66	1,431.72	Type 2	<2.7 mg/kg Mercury
8/22/23	184	3,948.65	Type 3	<10 mg/kg Mercury
8/23/23	161	3,387.11	Type 3	<10 mg/kg Mercury
8/23/23	40	821.70	Type 2	<2.7 mg/kg Mercury
8/24/23	41	814.37	Type 3	>10 mg/kg Mercury
8/24/23	138	2,724.48	Type 3	<10 mg/kg Mercury
8/24/23	133	2,560.94	Type 2	<2.7 mg/kg Mercury
8/25/23	282	5,620.34	Type 3	<10 mg/kg Mercury
8/25/23	46	881.16	Type 2	<2.7 mg/kg Mercury
8/28/23	68	1,329.50	Type 3	>10mg/kg Mercury
8/28/23	172	3,605.67	Type 3	<10 mg/kg Mercury

11/10/23	12	181.57	Type 3	<10 mg/kg Mercury
11/14/23	10	183.95	Type 3	<10 mg/kg Mercury
11/14/23	64	1,116.06	Debris Area 2	Petroleum Contaminated Soil w/Intermixed Debris
		<b>Total Tons to Date = 109,949.17</b>		

The areas that have been excavated as of Friday, November 17<sup>th</sup>, 2023, are as follows:

- Greens: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, 18<sup>th</sup>, and Practice Green 1
- Fairways: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Tee Boxes: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Hot Spots: 8<sup>th</sup> hole rough, 6<sup>th</sup> hole rough, 5<sup>th</sup> hole rough, 4<sup>th</sup> hole rough, 5<sup>th</sup> fairway hotspot, 12<sup>th</sup> fairway hotspot, 15<sup>th</sup> fairway hotspot, 10<sup>th</sup> tee rough, NW Shed Area, Main HS-1, Main HS-2, Main HS-3, Path HS-1, Main WO, and Debris Area HS-1
- Debris Area 1 (North and South Berm bases and north half sidewalls) and Debris Area 2
- Flam Waste Trap (FWT-1)

Based upon the work to date, the remedial excavation work is approximately 99.9% complete as of November 17<sup>th</sup>, 2023. All that is left are the two hotspots (Main HS-4 and Main HS-5) that are submerged in water.

See Attachment 1, Photographic Log for recent photos. The excavation progress to date is shown on Figure 1 in Attachment 2.

#### **Confirmation Soil Samples**

In order to confirm that the impacted soils have been removed completely, a rigorous confirmation soil sampling plan is being implemented.

Confirmation soil samples have been collected for laboratory analysis from the berm and hot spot areas. Figure 1 shows the areas that have been sampled, the areas we have received data for, and the areas where we have data pending as of November 17<sup>th</sup>, 2023. The confirmation soil sample results received to date have shown that, for the most part, the excavations have successfully removed all the soils with impacts. However, there may be some confirmation samples where the soils still had mercury at concentrations above the applicable standards. Those areas will be further excavated and then resampled to confirm that all the remaining impacted soils have been removed.

Figure 1 shows the areas which require additional excavation. Confirmation soil sample results are included as Attachment 3, Soil Analytical Table.

### **Particulate and Air Monitoring Results**

As part of the response actions, Braun Intertec is performing particulate monitoring across the Site to monitor for airborne dust. The particulate dust monitoring consists of multiple stationary dust meters as well as one portable dust monitor.

In addition to the dust meters, there is a weather monitoring station on the Site which is used to monitor wind speed, direction, and temperature. This data is then used to adjust the stationary particulate meters to ensure that they are placed in locations that effectively monitor generated dust. As part of the response action plan, dust control measures (primarily the wetting of soils) are implemented during excavation. For the beginning part of the week, the monitoring station was not operating due to a faulty battery. This was replaced by Field and then resumed testing.

The stationary dust monitors provide real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust monitors send out automated text and e-mail alerts if the dust monitoring thresholds established for the Site are exceeded. The notification threshold is currently set at 0.1 milligrams per meter cubed ( $\text{mg}/\text{m}^3$ ), which is well below the site-specific action level (SSAL) of  $0.621 \text{ mg}/\text{m}^3$ .

Since remediation is nearly complete, Braun Intertec has reduced the number of dust monitors from 2 units to 1 unit. In general, the stationary dust meter is set in the middle of the Site and where site excavation activities are occurring. Moving forward, the dust meter will be placed in a similar position and periodically checked every few days to swap the battery out and check maintenance. Braun Intertec also monitors the readings from a stationary dust meter located approximately 2 miles from the Site that is part of a regional air quality study to monitor regional air quality to see if that affects our particulate measurements.

The dust monitor was left operating at the Site overnight and over the weekend when the Site was not active to ensure dust levels remained below the SSAL.

While exceedances in dust levels did occur, they were short in duration, lasting no longer than a few seconds. The exceedances were observed to be a result of disturbances, typically caused by trucks and construction equipment driving along clean soils on the built haul roadways and dust control measures in the parking lot and on Larpenteur Ave and McKnight Road (i.e., sweeping of dirt from paved surfaces).

There was no visible dust observed from stockpiles of mercury and petroleum impacted with intermixed debris laden contaminated soil.

For the week of November 13<sup>th</sup> to November 17<sup>th</sup>, the summary of the dust monitoring results is below:

Particulate Station ID	Average Particulate Concentration (mg/m <sup>3</sup> )	Maximum Concentration (mg/m <sup>3</sup> )	Exceedances above SSAL (0.621 mg/m <sup>3</sup> )	Action Taken (if applicable)
A	0.053	25.1 (singular reading at 12:51:59 on 11/16/2023 and a few elevated readings around that time frame)	A few readings around the highest concentration	Continued to implement dust control measures with watering roads and dampening working conditions. This occurred during transport of the dust monitor inside the truck bed.

SSAL = Site Specific Action Level

In addition to monitoring for particulates via the onsite dust meters, Braun Intertec is collecting bulk air samples down wind of the excavation areas. The bulk air samples are collected from two locations using pumps and filter cartridges. The two locations were sampled once last week and for a total of two samples for the week. The bulk air cartridges samples are then sent to Bureau Veritas laboratory for analysis of mercury.

Both samples collected were non-detect at <0.00014 and <0.00015 milligrams per cubic meter.

### **Upcoming Schedule**

For the week of November 20<sup>th</sup>, 2023, Braun Intertec anticipates reducing site time and making periodic visits to check on the dust monitor and check site conditions. When the ground freezes Braun Intertec anticipates a day of excavation of the remaining two hot spots and if possible, a day of hauling contaminated soils to SKB landfill for disposal pending site conditions and weather, and creation of truck haul road on verified clean soils, cutting and filling portions of the Site with clean reuse soils, hauling export reuse soils, seeding the exposed soil for winter prep, and related sampling activities.

**Notes**

Exceeds R-SRV
Exceeded R-SRV - Soil Excavated and Disposed off- site

Minnesota Pollution Control Agency (MPCA) Residential/Recreational Soil Reference Values (R-SRVs) updated in March 2023.

mg/kg = Milligrams per kilogram.

< = Not detected at or above the laboratory reporting limit indicated.

--- = Not analyzed or calculated for this parameter or not applicable.

BTv = Background Threshold Value. BTv's are not calculated health based SRVs. The MPCA calculated SRVs were determined to be below background values (MPCA guidance document c-r1-05, April 2021).

[L1] = Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

[M0] = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

[M1] = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

[P6] = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

[R1] = RPD value was outside control limits.

## Mercury Air Sample Analytical Results

**TECHNICAL MEMORANDUM**

**SUBJECT**        **Weekly Environmental Response Action Update**

**SITE**            **The Heights Development, 2200 Larpenteur Avenue East, Saint Paul, Minnesota**

**DATE:**          **11/27/2023 to 12/1/2023**

**FROM:**          **Kenneth Larsen, PE, PG, Vice President, Principal Engineer - Braun Intertec**  
                     **Mark Keefer, PG, Principal Scientist - Braun Intertec**

Braun Intertec Corporation has prepared this Weekly Environmental Response Action Update for The Heights Development project (Site) on behalf of the Saint Paul Port Authority. The weekly update provides a summary of the environmental response actions that were completed at the Site between the listed period including identification of contaminated soil excavation locations, post excavation soil sample locations/results, related air/dust monitoring results, and a summary of the quantity of contaminated soil disposed of at the landfill for the given week and to date. A summary of anticipated environmental response actions for the following week is also provided.

The information and data included in the weekly update was collected by Braun Intertec in accordance with the following documents:

- Revised Response Action Plan, Hillcrest Redevelopment Site Saint Paul, Minnesota MPCA Brownfields Site ID: BF0001281 MDA Project No.: JAL101091523, Dated September 1, 2022.
- Dust Monitoring Plan for Response Action Implementation, The Heights Development Former Hillcrest Golf Course Site, Saint Paul, Minnesota MPCA Brownfields Site ID: BR1281 MDA Project No.: JAL101091523, dated March 31, 2023.

**General Construction Update 11/27/2023 to 12/1/2023**

Soil excavation work began on Monday August 7<sup>th</sup>, 2023.

Bolander is continuing to work on cutting and filling various parcels at the Site. The Xcel Energy parcel is pretty much complete. Grading machines are not running much due to the ground being frozen so only using off-road trucks, bulldozers, and excavators. The off-roads are bringing common reuse soils from the western portion of the Site and raising grade to the east and other areas throughout the Site.

Braun Intertec was on site Monday November 27<sup>th</sup> to check on Site progress and on the dust monitor. The battery was swapped out for the week. On Wednesday, November 29<sup>th</sup>, Braun Intertec was on Site to monitor soil excavation activities of the three remaining hot spots. A backhoe was used to remove the hotspots and then hauled toward the north side of the Site with off road trucks where it was stockpiled on poly. Braun collected confirmation samples of the base and sidewalls of the three hotspots and submitted soil samples to Pace on November 30<sup>th</sup>.

Impacted soils were hauled offsite on Thursday, November 30<sup>th</sup>. The soils were hauled to SKB landfill in Rosemount, MN under the Type 3 <10 milligram per kilogram (mg/kg) mercury impacted soils profile. A total of 31 loads of contaminated soils came from the three hotspots.

Other activities onsite during the week of November 27<sup>th</sup>, 2023, through December 1<sup>st</sup>, 2023, included export of topsoil and common soils, maintenance of haul roads, dewatering standing ponds into the driving range area, SWPP correction actions, and mass grading activities. Central Landscaping was also on Site applying hydro seed for winter soil prep.

The following is a summary of the daily soil disposal.

Date	# of Truck Loads	Tons of Soil Disposed of at SKB Landfill	Soil Type	Notes
8/16/23	48	925.2	Type 3	>10 mg/kg Mercury
8/17/23	92	1,707.74	Type 3	>10 mg/kg Mercury
8/18/23	97	1,819.81	Type 3	>10 mg/kg Mercury
8/21/23	70	1,356.04	Type 3	<10 mg/kg Mercury
8/21/23	66	1,431.72	Type 2	<2.7 mg/kg Mercury
8/22/23	184	3,948.65	Type 3	<10 mg/kg Mercury

		<b>Total Tons to Date = 110,498.65</b>		

The areas that have been excavated as of Friday, November 17<sup>th</sup>, 2023, are as follows:

- Greens: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, 18<sup>th</sup>, and Practice Green 1
- Fairways: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Tee Boxes: 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup>, 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup>, 14<sup>th</sup>, 15<sup>th</sup>, 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup>
- Hot Spots: 8<sup>th</sup> hole rough, 6<sup>th</sup> hole rough, 5<sup>th</sup> hole rough, 4<sup>th</sup> hole rough, 5<sup>th</sup> fairway hotspot, 12<sup>th</sup> fairway hotspot, 15<sup>th</sup> fairway hotspot, 10<sup>th</sup> tee rough, NW Shed Area, Main HS-1, Main HS-2, Main HS-3, Main HS-4, Main HS-5, Path HS-1, Main WO, Debris Area 1 HS-1, and Debris Area 2 HS-1
- Debris Area 1 (North and South Berm bases and north half sidewalls) and Debris Area 2 bases
- Flam Waste Trap (FWT-1)

Based upon the work to date, the remedial excavation work is 100% complete as of December 1<sup>st</sup>, 2023.

See Attachment 1, Photographic Log for recent photos. The excavation progress to date is shown on Figure 1 in Attachment 2.

#### **Confirmation Soil Samples**

In order to confirm that the impacted soils have been removed completely, a rigorous confirmation soil sampling plan is being implemented.

Confirmation soil samples have been collected for laboratory analysis from the hot spot areas. Figure 1 shows the areas that have been sampled, the areas we have received data for, and the areas where we have data pending as of December 1<sup>st</sup>, 2023. The confirmation soil sample results received to date have shown that, for the most part, the excavations have successfully removed all the soils with impacts. However, there may be some confirmation samples where the soils still had mercury at concentrations above the applicable standards. Those areas will be further excavated and then resampled to confirm that all the remaining impacted soils have been removed.

Figure 1 shows the areas which require additional excavation. Confirmation soil sample results are included as Attachment 3, Soil Analytical Table.

#### **Particulate and Air Monitoring Results**

As part of the response actions, Braun Intertec is performing particulate monitoring across the Site to monitor for airborne dust. The particulate dust monitoring consists of multiple stationary dust meters as well as one portable dust monitor.

In addition to the dust meters, there is a weather monitoring station on the Site which is used to monitor wind speed, direction, and temperature. This data is then used to adjust the stationary particulate meters to ensure that they are placed in locations that effectively monitor generated dust. As part of the response action plan, dust control measures (primarily the wetting of soils) are implemented during excavation.

The stationary dust monitors provide real time data of the particulate readings to both the Braun Intertec field staff and project manager. In addition, the dust monitors send out automated text and e-mail alerts if the dust monitoring thresholds established for the Site are exceeded. The notification threshold is currently set at 0.1 milligrams per meter cubed ( $\text{mg}/\text{m}^3$ ), which is well below the site-specific action level (SSAL) of  $0.621 \text{ mg}/\text{m}^3$ . In general, the stationary dust meter was set in the middle of the Site and where site excavation activities were occurring. The dust monitor was left operating at the Site overnight and over the weekend when the Site was not active to ensure dust levels remained below the SSAL.

While exceedances in dust levels did occur, they were short in duration, lasting no longer than a few seconds. The exceedances were observed to be a result of disturbances, typically caused by trucks and construction equipment driving along clean soils on the built haul roadways and dust control measures in the parking lot and on Larpenteur Ave and McKnight Road (i.e., sweeping of dirt from paved surfaces).

Since remediation complete, Braun Intertec has removed the last remaining dust monitor along with the weather station from the Site for the winter. Once spring arrives, Braun will discuss whether the dust monitor and weather station are needed for mass grading operations in the spring.

For the week of November 27<sup>th</sup> to December 1<sup>st</sup>, the summary of the dust monitoring results is below:

Particulate Station ID	Average Particulate Concentration ( $\text{mg}/\text{m}^3$ )	Maximum Concentration ( $\text{mg}/\text{m}^3$ )	Exceedances above SSAL ( $0.621 \text{ mg}/\text{m}^3$ )	Action Taken (if applicable)
A	0.019	3.98 (singular reading at 09:49:28 on 11/28/2023 and	A few readings around the highest concentration	Continued to implement dust control measures.

		a few elevated readings around that time frame)		
--	--	---	--	--

SSAL = Site Specific Action Level

Since remediation is complete, Braun Intertec is no longer collecting bulk air samples for analysis until further notice.

### **Upcoming Schedule**

For the week of December 4<sup>th</sup>, 2023, Braun Intertec is no longer needed on site for environmental purposes, unless Bolander encounters something unknown while doing mass grading activities. They will be wrapping up soon in the coming weeks when weather shuts them down for the winter. Other Site work will be mass grading, cutting and filling portions of the Site with clean reuse soils, hauling export reuse soils and topsoil, and hydroseeding the exposed soil for winter prep.

**Project B1903316.02**

Location	Sample Identifier	Date Collected	Compound (mg/kg)	
			Total Arsenic	Total Mercury
			R-SRV: 9 <sup>BTV</sup>	R-SRV: 2.7

Minnesota Pollution Control Agency (MPCA) Residential/Recreational Soil Reference Values (R-SRVs) updated in March 2023.

mg/kg = Milligrams per kilogram.

< = Not detected at or above the laboratory reporting limit indicated.

--- = Not analyzed or calculated for this parameter or not applicable.

BTV = Background Threshold Value. BTVs are not calculated health based SRVs. The MPCA calculated SRVs were determined to be below background values (MPCA guidance document c-r1-05, April 2021).

[L1] = Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

[M0] = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

[M1] = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

[P6] = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

[R1] = RPD value was outside control limits.

### GENERAL COMMENTS

Unless otherwise noted below the following statements apply: 1) all samples were received in acceptable condition, 2) all quality control results associated with this sample set were within acceptable limits and /or do not adversely affect the reported results and 3) the industrial hygiene results have not been blank corrected.

The client provided their pertinent field sampling data on the analysis request paperwork submitted with the samples. Results apply to the sample as received.

**Results relate only to the items tested.**

### GENERAL COMMENTS

Unless otherwise noted below the following statements apply: 1) all samples were received in acceptable condition, 2) all quality control results associated with this sample set were within acceptable limits and /or do not adversely affect the reported results and 3) the industrial hygiene results have not been blank corrected.

The client provided their pertinent field sampling data on the analysis request paperwork submitted with the samples. Results apply to the sample as received.
